PHILIPS

PHILIPS

1. Technical Specifications and Connection Facilities

1.1 General:

Mains voltage	: 198V-276V
Mains frequency	: 43 Hz - 63Hz
Power consumption mains	: 28 W
Power consumption standby	: < 7 W
Power consumption low power stand-by	: < 3 W

1.2 RF Tuner

Test equipment:Fluke 54200 TV Signal generator
Test streams:PAL BG Philips Standard test pattern

1.2.1 System:

PAL B/G, PAL D/K, SECAM L/L', PAL I

1.2.2 RF - Loop Through:

Frequency range	: 45 MHz - 860 MHz
Gain: (ANT IN - ANT OUT)	: -6 dB to 0dB

1.2.3 Radio Interference:

input voltage /3 tone method (+40 dB min)	: no limit

1.2.4 Receiver:

PLL tuning with AFC for optimum reception

Frequency range:	: 45.25 MHz - 857 MHz
Sensitivity at 40 dB S/N	: ≥ 60dBµV at 75Ω (video unweighted)

1.2.5 Video Performance:

Channel 25 / 503,25 MHz,
Test pattern: PAL BG PHILIPS standard test pattern,
RF Level 74 dBV
Measured on SCART 1

Frequency response:	: 0 - 4.00 MHz +0-4dB
Group delay (0.1 MHz - 4.4 MHz)	: 0 nsec ± 150nsec

1.2.6 Audio Performance:

Audio Performance Analogue - HiFi:

Frequency response at SCART 1 (L+R) output:	: 100 Hz - 12 kHz / 0± 3dB
S/N according to DIN 45405, 7, 1967 and PHILIPS standard test pattern video signal:	: FM: ≥ 50dB; AM ≥ 45dB, unweighted
Harmonic distortion (1 kHz, ± 25 kHz deviation):	: FM ≤ 1.5%; AM ≤ 2%

Audio Performance NICAM:

Frequency response at SCART 1(L+R) output:	: 40 Hz - 15 kHz 0 ± 3dB
S/N according to DIN 45405, 7, 1967 and PHILIPS standard test pattern video signal:	: ≥ 60 dB unweighted
Harmonic distortion (1 kHz):	: ≤ 0.5 %

1.2.7 Tuning

Automatic Search Tuning

scanning time without antenna	: typ. 3 min. PAL
stop level (vision carrier)	: ≥ 37dBµV
Maximum tuning error of a recalled program	: ± 62.5 kHz
Maximum tuning error during operation	: ± 100 kHz

Tuning Principle
automatic B,G, I, DK and L/L'detection
manual selection in "STORE" mode

1.3 Analogue Inputs

1.3.1 SCART 1 (Connected to TV)

Pin Signals:

1	- Audio R	1.8V RMS
2	- Audio R	
3	- Audio L	1.8V RMS
4	- Audio GND	
5	- Blue/Chroma GND	
6	- Audio L	
7	- Blue out/ Chroma in	0.7Vpp ± 0.1V into 75 Ohm (*)
8	- Function switch	<2V = TV >4.5V / <7V = asp. ratio 16:9 DVD >9.5V / <12V = asp. ratio 4:3 DVD
9	- Green GND	
10	- P50 control	
11	- Green	0.7Vpp ± 0.1V into 75 Ohm (*)
12	- Nc	
13	- Red/Chroma GND	
14	- fast switch GND	
15	- Red out/ Chroma out	0.7Vpp ± 0.1V into 75 Ohm (*) ± 3dB 0.3Vpp Chroma (burst)
16	- fast switch RGB/ CVBS	or Y <0.4V into 75 Ohm = CVBS >1V / <3V into 75 Ohm = RGB
17	- Y/CVBS GND OUT	
18	- Y/CVBS GND IN	
19	- CVBS/Y	1Vpp ± 0.1V into 75 Ohm (*)
20	- CVBS/Y	
21	- Shield	

1.3.2 SCART 2 (Connected to AUX)

Pin Signals:

1	-Audio R	1.8V RMS
2	-Audio R	
3	-Audio L	1.8V RMS
4	-Audio GND	
5	-Blue/Chroma GND	
6	-Audio L	
7	-Blue in/ Chroma out	± 3dB 0.3Vpp Chroma (burst)
8	-Function switch	
9	-Green GND	
10	-P50 control	
11	-Green	
12	-Nc	
13	-Red/Chroma GND	
14	-fast switch GND	
15	-Red in/ Chroma in	
16	-fast switch RGB/ CVBS or Y	
17	-CVBS GND OUT	
18	-CVBS GND IN	
19	-CVBS/Y/RGB sync	1Vpp ± 0.1V into 75 Ohm (*)
20	-CVBS/Y	
21	-Shield	

(*) for 100% white

1.3.3 Audio/Video Front Input Connectors

Audio

Input voltage	: 2 Vrms
Input impedance	: >10kΩ

Video - Cinch

Input voltage	: 1 Vpp ± 3dB
Input impedance	: 75 Ω

Video - YC (Hosiden)

Input voltage Y	: 1Vpp ± 3dB
Input impedance Y	: 75 Ω
Input voltage C	: burst 300 mVpp ± 3 dB
Input impedance C	: 75 Ω

1.4 Video Performance

All outputs loaded with 75 Ohm
SNR measurements over full bandwidth without weighting.

1.4.1 SCART (RGB)

SNR	: > -65 dB on all output
Bandwidth	: 4.8 MHz ± 2dB

1.5 Audio Performance CD

1.5.1 Cinch Output Rear

Output voltage 2 channel mode	: 2Vrms ± 2dB
Channel unbalance (1kHz)	: <1dB
Crosstalk 1kHz	: >95dB
Crosstalk 20Hz-20kHz	: >85dB
Frequency response 20Hz- 20kHz	: ±0.2dB max
Signal to noise ratio	: >95 dB
Dynamic range 1kHz	: >85dB
Dynamic range 20Hz-20kHz	: >80dB
Distortion and noise 1kHz	: >85dB
Distortion and noise 20Hz-20kHz	: >75dB
Intermodulation distortion	: >77dB
Mute	: >95dB
Outband attenuation:	: >40dB above 30kHz

1.5.2 Scart Audio

Output voltage 2 channel mode	: 1.6Vrms ± 2dB
Channel unbalance (1kHz)	: <1dB
Crosstalk 1kHz	: >85dB
Crosstalk 20Hz-20kHz	: >70dB
Frequency response 20Hz- 20kHz	: ± 0.2dB max
Signal to noise ratio	: >85 dB
Dynamic range 1kHz	: >75dB
Dynamic range 20Hz-20kHz	: >70dB
Distortion and noise 1kHz	: >75dB
Distortion and noise 20Hz-20kHz	: >65dB
Intermodulation distortion	: >70dB
Mute (spin-up, pause, access)	: >85dB
Outband attenuation:	: >40dB above 25kHz

1.6 Digital Output

1.6.1 Coaxial

CDDA/ LPCM (incl MPEG1)	: according IEC958
MPEG2, AC3 audio	: according IEC1937
DTS	: according IEC1937, amendment 1

1.7 Digital Video Input (IEEE 1394)

1.7.1 Applicable Standards

Implementation according:
IEEE Std 1394-1995
IEC 61883 - Part 1
IEC 61883 - Part 2 SD-DVCR (02-01-1997)
Specification of consumer use digital VCR's using 6.3 mm magnetic tape - dec.1994
Mechanical connection according:
Annex A of 61883-1

1.8 P50 System Control

Via SCART pin nr 10

1.9 Dimensions and Weight

Height of feet	: 10mm
Apparatus tray closed	: WxDxH :435 x 324.5 x 88cm
Apparatus tray open	: WxDxH :435 x 366 x 88cm
Weight without packaging	: app. 4 kg ± 0.5 kg
Weight in packaging	: app. 6.5 kg

1.10 Laser Output Power & Wavelength

1.10.1 DVD

Output power during reading	: 0.8mW
Output power during writing	: 20mW
Wavelength	: 660nm

1.10.2 CD

Output power	: 0.3mW
Wavelength	: 780nm

2. Safety Information, General Notes

2.1 Safety Instructions

2.1.1 General Safety

Safety regulations require that during a repair:
- Connect the unit to the mains via an isolation transformer.
- Replace safety components, indicated by the symbol , only by components identical to the original ones. Any other component substitution (other than original type) may increase risk of fire or electrical shock hazard.

Safety regulations require that after a repair, you must return the unit in its original condition. Pay, in particular, attention to the following points:
- Route the wires/cables correctly, and fix them with the mounted cable clamps.
- Check the insulation of the mains lead for external damage.
- Check the electrical DC resistance between the mains plug and the secondary side:
  1. Unplug the mains cord, and connect a wire between the two pins of the mains plug.
  2. Set the mains switch to the 'on' position (keep the mains cord unplugged!).
  3. Measure the resistance value between the mains plug and the front panel, controls, and chassis bottom.
  4. Repair or correct unit when the resistance measurement is less than 1 MΩ.
  5. Verify this, before you return the unit to the customer/ user (ref. UL-standard no. 1492).
  6. Switch the unit 'off', and remove the wire between the two pins of the mains plug.

2.1.2 Laser Safety

This unit employs a laser. Only qualified service personnel may remove the cover, or attempt to service this device (due to possible eye injury).

Laser Device Unit

Type	:	Semiconductor laser GaAlAs
Wavelength	:	650 nm (DVD)
	:	780 nm (VCD/CD)
Output Power	:	20 mW (DVD+RW writing)
	:	0.8 mW (DVD reading)
	:	0.3 mW (VCD/CD reading)
Beam divergence	:	60 degree

Figure 2-1

Note: Use of controls or adjustments or performance of procedure other than those specified herein, may result in hazardous radiation exposure. Avoid direct exposure to beam.

2.2 Warnings

2.2.1 General

- All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD,). Careless handling during repair can reduce life drastically. Make sure that, during repair, you are at the same potential as the mass of the set by a wristband with resistance. Keep components and tools at this same potential.
  Available ESD protection equipment:
  - Complete kit ESD3 (small tablemat, wristband, connection box, extension cable and earth cable) 4822 310 10671.
  - Wristband tester 4822 344 13999.
- Be careful during measurements in the live voltage section. The primary side of the power supply (pos. 1005), including the heatsink, carries live mains voltage when you connect the player to the mains (even when the player is 'off'!). It is possible to touch copper tracks and/or components in this unshielded primary area, when you service the player. Service personnel must take precautions to prevent touching this area or components in this area. A 'lightning stroke' and a stripe-marked printing on the printed wiring board, indicate the primary side of the power supply.
- Never replace modules, or components, while the unit is 'on'.

2.2.2 Laser

- The use of optical instruments with this product, will increase eye hazard.
- Only qualified service personnel may remove the cover or attempt to service this device, due to possible eye injury.
- Repair handling should take place as much as possible with a disc loaded inside the player.
- Text below is placed inside the unit, on the laser cover shield:

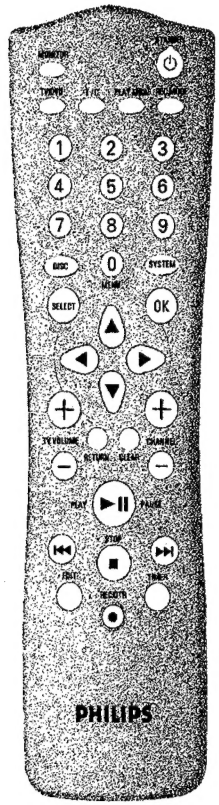
3. Directions For Use

The remote control



MONITOR	**Monitor**: This button lets you switch between the (internal) TV tuner in the DVD recorder (TV picture on the TV set) and playback on the DVD recorder.
STANDBY ⏻	**Switch on or off**: To switch set on or off, interrupt menu function, interrupt a programmed recording (TIMER)
TV/DVD	**TV/DVD switch**: Switches the scart socket **EXT 2 AUX I/O** directly to the TV set. This lets you watch the picture from any unit connected to this scart socket (set-top box', video recorder or satellite receiver) and at the same time record from another source. If you have not connected a device to scart socket **EXT 2 AUX I/O** you can use this button to switch between TV reception and DVD recorder. This, however, functions only if you have connected your TV set to the DVD recorder using a scart cable (socket **EXT 1 TO TV-I/O**) and your TV set reacts to the switching.
T/C	**Title/Chapter**: Choose the 'T'(Title)/'C'(Chapter) directly from the menu bar If 'INFO' appears in the display, the index menu from a recorded disc or an introductory film will be shown. In this case, this function is not available.
PLAY MODE	**Playback type**: Choose between repeat, shuffle play and intro-scan
REC. MODE	**Record type (quality)**: To select the maximum possible record time
0..9	**Number buttons**: 0 - 9
DISC-MENU	**Disc menu**: To show the DVD menu or the index screen
SYSTEM-MENU	**System menu**: Call up/cancel the main menu (menu bar at the top of the screen)
SELECT	**Select**: Select function/value
OK	**Store/confirm**: To store or confirm entry
◄ ► ▲ ▼	**Cursor keys**: Left, right, up, down
RETURN	**Back**: Return to previous menu on a video CD (VCD). This function works also on some DVD's.
CLEAR	**Delete**: To delete last entry or clear programmed recording (TIMER)
CHANNEL +	**Plus**: Next programme number
CHANNEL −	**Minus**: Previous programme number
PLAY/PAUSE ►II	**Playback/pause**: Play back a disc. If this button is pressed during playback, the DVD recorder switches to pause. You will see a still picture. If this button is pressed during recording, the DVD recorder will also switch to pause.
⏮	**Select previous title/search backwards**: Briefly press the button during playback: Previous chapter/film or previous title Hold down the button: Search backwards Hold down the button during the still picture: slow motion backwards
⏭	**Select next title/search forwards**: Briefly press the button during playback: Next chapter/film or next title Hold down the button: Search forwards Hold down the button during the still picture: slow motion forward
STOP ■	**Stop**: Stop playback / recording, except with programmed recordings (TIMER) Hold down the button to open and close the disc tray.
REC/OTR ●	**Record**: Record the current TV channel.
EDIT	**EDIT**: For displaying the edit menu for DVD+(RW) discs, for setting chapter markers
TIMER	**TIMER**: To program a recording with ShowView® / without ShowView® or to alter/clear programmed recordings

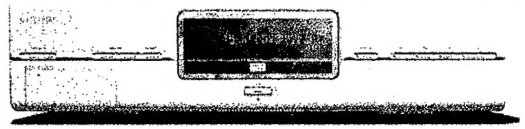
Additional TV functions

TV VOLUME +	**TV volume**: Increase TV volume
TV VOLUME −	**TV volume**: Reduce TV volume

For the following functions you need to hold down the button **DVD/TV** at the side and then select the function you need with the appropriate button.

0..9	**Number buttons**: 0 - 9
CHANNEL +	**TV programme number**: To select a higher programme number
CHANNEL −	**TV programme number**: To select a lower programme number

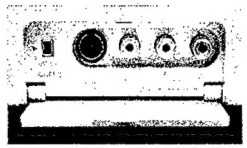
Front of the device



STANDBY/ON	**Switch on or off**: To switch off or on, interrupt a function, interrupt a programmed recording (TIMER)
CHANNEL −	**Select**: Lower programme number
CHANNEL +	**Select**: Higher programme number
REC MODE	**Record type (quality)**: To select the maximum possible record time

RECORD	**Record**: Record the current TV channel
RECORD LED	**Recording in progress**: Red light on the **RECORD** button to indicate recording in progress
OPEN/CLOSE	**Open/close disc tray**: Open/close disc tray
⏮	Select previous title/search backwards
⏭	Select next title/search forwards
■STOP	**Stop**: Interrupt playback/recording
► PLAY/PAUSE	**Playback/pause**: Play back recorded disc, interrupt playback, still picture

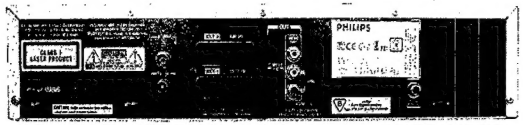
Behind the flap at the left-hand corner on the front



DV	**i-Link / DV socket (digital video input, IEEE 1394, FireWire)**: Connecting a digital camcorder or other suitable device (programme number 'EXT2')
S-VIDEO	**S-Video socket**: Connection of SVHS/Hi8 camcorders or SVHS/Hi8 video recorders (programme number 'EXT 1')
Yellow socket VIDEO	**Video input socket**: Connection of camcorders or video recorders (programme number 'EXT 1')
White/red socket left AUDIO right	**Audio input socket left/right**: Connection of camcorders or video recorders (programme number 'EXT 1')

Switching between sockets **IN S-VIDEO (Y/C)** and **IN VIDEO (CVBS)** is done automatically. In case both sockets are used, the signal received at socket **IN S-VIDEO (Y/C)** is treated with priority.

Back of the unit



~MAINS	**Mains socket**: Connection to the mains supply (230V/50Hz)
ANTENNA	**Aerial input**: Connection of the aerial
TV	**Aerial output**: Connection of the TV set
EXT 2 AUX I/O	**Scart socket 2**: Connection of an additional device (satellite receiver, set-top box, video recorder, camcorder, etc.)
EXT 1 TO TV-I/O	**Scart socket 1**: Connection of a TV set. RGB- output
OUT S-VIDEO (Y/C)	**S-Video output**: Connection of an S-Video compatible TV set
OUT VIDEO (CVBS)	**Video output (yellow socket)**: Connection of a TV set with a video input (CVBS, Composite Video)
OUT L AUDIO R	**Analogue audio output (white/red socket)**: Connection of a TV set with audio input sockets or connection of an additional device
DIGITAL AUDIO OUT	**Digital audio output**: Connection of a digital audio device (amplifier/receiver)

The symbols on your DVD recorder display

These symbols can light up on your DVD recorder display:

TITLE	Displays the title number selected/played (DVD)
TRACK	Displays the track selected/played (VCD/CD)
DVD+RW	Displays the inserted DVD disc: DVD /DVD+R / DVD+RW. Disc types 'DVD-R/DVD-RW.' are shown as DVD.
S-VCD	Displays the CD-disc inserted: S VCD/VCD/CD
88+	Displays recording type (Quality)/Playback type HQ, SP+, EP, EP+
CHAPTER	Displays the chapter selected/played
TOTAL TIME	Total playback time
REMAIN TIME	Time remaining
TIME	Time used
DTS	A DTS audio signal is available on the digital audio output
DD DIGITAL	A Dolby digital audio signal is available on the digital audio output
MPEG	An MPEG audio signal is available on the digital audio output
PCM	A PCM audio signal is available on the digital audio output
CHANNEL	Channel/programme number
►	Playback in progress
II	Playback/record interrupted (Pause)
RECORD	Recording in progress
	A satellite recording has been programmed.
o((	A remote control signal has been received
	A recording (timer) has been programmed
DECODER	A decoder has been assigned to the current TV channel (programme)

VPS/PDC	Video programming system / programme delivery control: A VPS or PDC code will be transmitted for the selected TV program
NICAM	The DVD recorder has detected a Nicam audio signal.
STEREO	During playback a HiFi/2 channel tone was detected or a HiFi/2 channel tone was received
▮▮▮▮	Multi-function display/Text line •) Clock •) Disc/title playing time •) OTR switch-off time •) Title name •) Display of programme number of TV channel/position/channel name/function. •) Display of informations, warnings.

Messages in the DVD recorder display

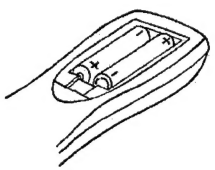
The following messages may appear in your DVD recorder display

TV ON	The DVD recorder is currently in the Initial Installation mode. Switch on your TV set and read section 'Installing your DVD recorder' in chapter 'Initial Installation'.
NO SIGNAL	No input signal available (signal inadequate or unstable)
MENU	The menu on the screen is active
OPENING	Disc tray opening
TRAY OPEN	Disc tray open
CLOSING	Disc tray closing
READING	Disc being read
MENU UPDT	Once recording has been successfully completed the table of contents is created.
INIT MENU	The menu structure is created after the first recording has been made on a new disc
COPY PROT	You have tried to copy a copy-protected DVD/video cassette.
WAIT	Please wait until this message disappears. The DVD recorder is busy performing a task.
NO DISC	No disc has been inserted for recording. If a disc has been inserted, perhaps it cannot be read.
INFO	Information on the inserted DVD is displayed on the screen
BUSY	The DVD recorder is processing the changes to make them DVD compatible
ERASING	The entire disc is erased
EMPTY DISC	The disc inserted is either new or has been completely erased (no recordings).
PROTECTED	The disc is protected against recording.
MAX TITLE	The maximum number of titles per disc has been reached. The maximum number of titles per disc is 48.
MAX CHAP	The maximum number of chapters per title/disc has been reached. The maximum number of chapters per title is 99, and 124 per disc.
DISC FULL	The disc is full. There is no space for new recordings
PAL DISC	A disc with PAL recordings has been inserted. The machine is trying to record an NTSC signal. Insert a new disc or one that contains NTSC recordings.
NTSC DISC	A disc with NTSC recordings has been inserted. The machine is trying to record a PAL signal. Insert a new disc or one that contains PAL recordings.
RECORDING	An illegal action (e.g. **OPEN/CLOSE** button) was attempted during recording
FREE TITLE	Playback was started for an empty title or the following title is empty
DISC LOCK	An attempt has been made to record during playback of a protected disc. This message appears if an attempt is made to insert a chapter marker (**EDIT** button).
DISC ERR	An error occurred when the title was being written. If this error keeps occurring, please clean the disc or use a new one. You will find information on how to clean the disc in the next chapter in the section 'Cleaning the discs'.
DISC WARN	An error occurred when writing the title. Recording was continued; the error was skipped
SETUP	After the automatic channel search, the menu for time/date settings appears on the screen.
WAIT 01	During the automatic channel search, the TV channels found will be count
BLOCKED	It is not possible to close/open the disc tray.
SAFE RECO	The new recording will be made at the end of all the other recordings (SAFE RECORD).
EASYLINK	The 'EasyLink' function is currently transferring information from the TV set.

2 Connecting the DVD recorder

Preparing the remote control for operation

ENGLISH



The remote control and its batteries are packed separately in the original DVD recorder packaging. You must install the batteries in the remote control before use - described in the following section.

1. Take the remote control of the DVD recorder and the enclosed batteries (2 batteries).
2. Open the battery compartment, insert the batteries as shown and then close the battery compartment.

The remote control is now ready to use.
Its range is approximately 5 to 10 meters.

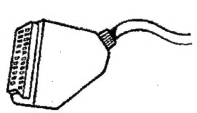
'Aim' correctly
In the following sections, you will need the remote control for the first time. Always point the front of the remote control at the DVD recorder and not at the TV set.

Tip

Connecting your DVD recorder to the TV set

The necessary cable connections must be made before you can record or playback TV programmes using your DVD recorder.

Connect the DVD recorder **directly** to your TV set. If there is a video recorder in between the picture quality may be poor because of the copy protection system built into the DVD recorder.
We recommend that you use a scart cable to connect your TV set and DVD recorder.



What is a scart cable?
The scart or Euro AV cable serves as the universal connector for picture, sound and control signals. With this type of connection, there is practically no loss of quality in picture or sound transmission.

When you install your DVD recorder for the first time, select one of the following options:

'Connecting with a scart cable and Easy Link'
If your TV set is equipped with 'Easy Link, Cinema Link, NexTView Link, Q-Link, Smart Link, Megalogic, Datalogic, ...' and you wish to use a scart cable.

What is Easy Link?
If your TV set is equipped with functions such as Easy Link, Cinema Link, NexTView Link, Q-Link, Smart Link, Megalogic or Datalogic, which are fully compatible with one another (TV set, DVD recorder, etc.), your DVD recorder can exchange information with your TV set. Please see your TV's operating instructions.

'Connecting with a scart cable without Easy Link'
If your TV set is not equipped with 'Easy Link, Cinema Link, NexTView Link, Q-Link, Smart Link,, Megalogic, Datalogic, ...' and you wish to use a scart cable.

'Connecting with an S-Video (Y/C) cable'
If your TV set is equipped with an S-Video (SVHS) socket.

What is an 'S-Video (Y/C) cable'?
This connecting cable, also known as the SVHS cable, is used to transmit the brightness signal (Y signal) and colour signal (C signal) separately. This mini DIN socket/plug is also called a Hosiden socket/plug.

'Connecting with video (CVBS) cable'
If your TV set is equipped only with a video (CVBS) socket.

What is 'Video (CVBS)'?
This socket, usually referred to as the Cinch socket, is used for transmitting the composite video signal (FBAS, CVBS). In this method of transmission the colour signal and the brightness signal are transmitted on the same cable. In certain circumstances, this can lead to problems with the picture, such as 'Moiré' patterns.

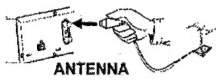
Connecting with a scart cable and 'Easy Link'

ENGLISH

easyLINK

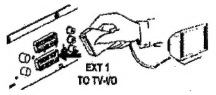
Your DVD recorder can exchange information with your TV set using 'Easy Link'. Your TV channels can also be transferred in the same order from your TV set to your DVD recorder using 'Easy Link'.

Have the following cables ready:
an aerial cable (1, supplied), a mains cable (2, supplied), a special scart cable (3, suitable for Easylink).

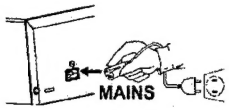


1. Switch off your TV set.
2. Remove the aerial cable plug from your TV set. Insert it into the **ANTENNA** socket at the back of the DVD recorder.

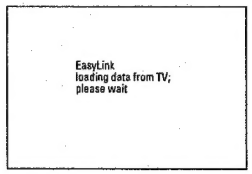
3. Insert one end of the supplied aerial cable into the **TV** socket at the back of the DVD recorder and the other end into the aerial input socket at the back of the TV set.



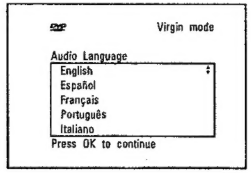
4. Plug a special scart cable (for Easylink) into the scart socket **EXT 1 TO TV-I/O** at the back of the DVD recorder and the corresponding scart socket at the back of the TV set (see TV set operating instructions).
5. Switch on the TV set.



6. Insert one end of the supplied mains cable into the mains socket ~**MAINS** at the back of the DVD recorder and the other end into the wall socket.



7. A message appears on the screen announcing that the transfer has started. 'EASY LINK' appears on the display during transfer.
The TV set transfers all stored TV channels, in the same order, to the DVD recorder.
This may take several minutes.



*** 'Time', 'Year', 'Month', 'Date' appears on my TV screen for confirmation**

Normally, the date and time are transferred from the data of the TV channel that is stored under programme P01. If the aerial signal is too weak or disrupted, you must manually set the time and date:

1. Check if the time in line *'Time'* is correct.
2. If required, change the time with the number buttons **0..9** on your remote control.
3. Select the next line with ▲ or ▼.
4. Check the displayed settings for: *'Year'*, *'Month'* and *'Date'*.
5. When all information is correct, save by pressing **OK**.

Problem

*** I can see more installation menus on my TV set**

Not all the necessary data has been transferred. Please enter the settings by hand as follows. For more information on the various functions see 'Initial installation' in 'Installing your DVD recorder'.

1. Select the desired audio language using ▼ or ▲ and confirm with **OK**.
2. Select the desired subtitle language with ▼ or ▲ and confirm with **OK**.
3. Select the desired picture format using ▼ or ▲.
   - *'4:3 letterbox'* — For a 4:3 TV set; cinema format (black bars above and below the picture)
   - *'4:3 panscan'* — For a 4:3 TV set; full height format with the sides cut off
   - *'16:9'* — For a 16:9 TV set
4. Confirm with **OK**.
5. Select your country with ▼ or ▲.
   If your country does not appear, select *'Other'*.
6. Confirm with **OK**.

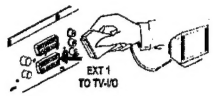
Problem

Initial installation is now complete.

Connecting with a scart cable without 'Easy Link'

Have the following cables ready:
an aerial cable (1, supplied), a mains cable (2, supplied), a scart cable (3).

1. Remove the aerial cable plug from your TV set. Insert it into the **ANTENNA** socket at the back of the DVD recorder.

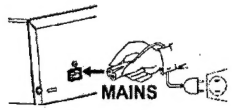


❷ Insert one end of the supplied aerial cable into the **TV** socket at the back of the DVD recorder and the other end into the aerial input socket at the back of the TV set.

❸ Plug a scart cable into the scart socket **EXT 1 TO TV-I/O** at the back of the DVD recorder and the scart socket for the DVD recorder at the back of the TV set (see TV set operating instructions).

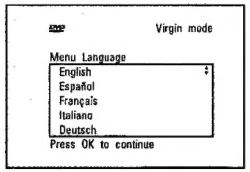
My TV set has several scart sockets. Which one should I use?
Select the scart socket that is suitable for both video output and for video input.
My TV set shows me a selection menu for the scart socket
Select 'VCR' as the source for this scart socket.

❹ Switch on the TV set.



❺ Insert one end of the supplied mains cable into the mains socket ~**MAINS** at the back of the DVD recorder and the other end into the wall socket. '*TV ON*' will appear on the display.

❻ If the connection was properly made and your TV was **automatically switched** to the programme number for the scart socket, e.g. 'EXT', '0', 'AV', you will see the following picture:

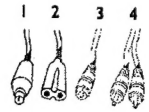


× My screen is empty.
✓ Many TV sets are switched by the DVD recorder to the programme number for the scart socket by way of a control signal sent through the scart cable.
✓ If the TV set does not automatically switch to the scart socket programme number, manually change to the corresponding programme number on your TV set (see your TV's operating instructions).
✓ Check that the scart cable is connected from the TV set to the **EXT 1 TO TV-I/O** socket on the DVD recorder. The **EXT 2 AUX I/O** socket is intended only for additional devices.

Then, read the paragraph on 'Initial installation' in 'Installing your DVD recorder'.

ENGLISH

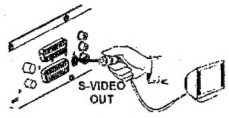
Connecting with an S-Video(Y/C)cable



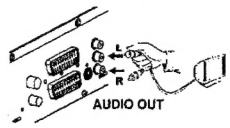
Have the following cables ready:
an aerial cable (1, supplied), a mains cable (2, supplied), an S-Video (SVHS) cable (3), an audio cable (4, supplied, red/white plug).

❶ Remove the aerial cable plug from your TV set. Insert it into the **ANTENNA** socket at the back of the DVD recorder.

❷ Insert one end of the supplied aerial cable into the **TV** socket at the back of the DVD recorder and the other end into the aerial input socket at the back of the TV set.

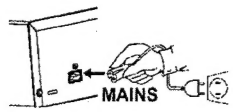


❸ Insert one end of a S-Video (SVHS) cable into the **OUT S-VIDEO (Y/C)** socket at the back of the DVD recorder and the other end into the S-Video (SVHS) input socket on the TV set (usually labelled 'S-Video in' or 'SVHS in'. See TV operating instructions).



❹ Insert one end of the supplied audio (Cinch) cable into the red/white Cinch socket **OUT L AUDIO R** at the back of the DVD recorder and the other end into the audio input socket (usually red/white) on the TV set (usually labelled 'Audio in' or 'AV in'. See TV operating instructions).

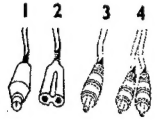
❺ Switch on the TV set. Switch the TV set over to this input socket or select the relevant channel number. Please see your TV's operating instructions for the channel number you need.



❻ Insert one end of the supplied mains cable into the mains socket ~**MAINS** at the back of the DVD recorder and the other end into the wall socket. '*TV ON*' will appear on the display.

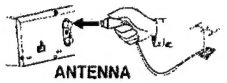
Then, read the paragraph on 'Initial installation' in 'Installing your DVD recorder'.

Connecting with video(CVBS) cable



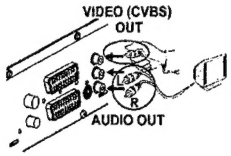
Have the following cables ready:
an aerial cable (1, supplied), a mains cable (2, supplied), a video (CVBS) cable (3, supplied, yellow plug), an audio cable (4, supplied, red/white plug).

ENGLISH



1. Remove the aerial cable plug from your TV set. Insert it into the **ANTENNA** socket at the back of the DVD recorder.

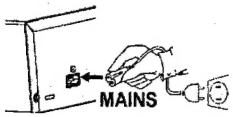
2. Insert one end of the supplied aerial cable into the **TV** socket at the back of the DVD recorder and the other end into the aerial input socket at the back of the TV set.



3. Insert one end of the supplied video (CVBS) cable into the yellow Cinch socket **OUT VIDEO (CVBS)** at the back of the DVD recorder and the other end into the video input socket (usually yellow) on the TV set (usually labelled 'Video in' or 'AV in'. See TV operating instructions).

4. Insert one end of the supplied audio (Cinch) cable into the red/white Cinch socket **OUT L AUDIO R** at the back of the DVD recorder and the other end into the audio input socket (usually red/white) on the TV set (usually labelled 'Audio in' or 'AV in'. See TV operating instructions).

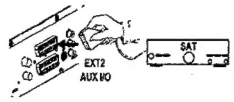
5. Switch on the TV set. Switch the TV set over to the Video/Audio input socket or select the relevant programme number. Please see your TV's operating instructions for the programme number you need.



6. Insert one end of the supplied mains cable into the mains socket ~**MAINS** at the back of the DVD recorder and the other end into the wall socket. '*TV ON*' will appear on the display.

Then, read the paragraph on 'Initial installation' in 'Installing your DVD recorder'.

Connecting additional devices to the second scart socket



You can connect additional devices such as decoders, satellite receivers, camcorders, etc. to the **EXT 2 AUX I/O** socket. When playback is started on this additional device the DVD recorder automatically connects the **EXT 2 AUX I/O** scart socket with the **EXT 1 TO TV-I/O** scart socket. You will then see the picture from the additional device on your TV set, even if the DVD recorder is switched off.
The **TV/DVD** button on the remote control allows you to switch between playback through the **EXT 2 AUX I/O** scart socket and playback from the DVD recorder.

Connecting additional video recorders

You can connect a video recorder to the **EXT 2 AUX I/O** socket. If you have an SVHS video recorder you can additionally use the **OUT S-VIDEO (Y/C)** socket and the **OUT L AUDIO R** sockets.

Please note:
Most pre-recorded video cassettes and DVDs are copy-protected. If you try to copy them you will see the message '*COPY PROT*' on the DVD recorder's display.

***When copying video cassettes the display on the DVD recorder shows '*NO SIGNAL*'.**
✓ Check that the scart cable is plugged in firmly.
✓ The DVD recorder may not be able to recognise the video input signal if this signal is poor or does not comply with relevant standards.

***When I copy DVD video discs or pre-recorded video cassettes the picture is fuzzy and the brightness varies**
✓ This happens if you try to copy DVDs or video cassettes that have been copy-protected. Even though the picture on the TV is fine the recording on a DVD+R(W) is faulty. This interference is unavoidable with copy-protected DVDs or video cassettes.

Problem

Connect camcorder to the front sockets

To copy camcorder recordings, you can use the front sockets. These sockets are located behind the flap on the left hand side.

ENGLISH

Best Picture Quality

If you have a DV or Digital 8 camcorder, connect the **DV** input of the DVD recorder to the appropriate DV output on the camcorder.

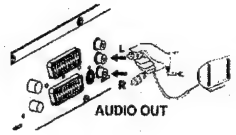
Very good Picture Quality

If you have a Hi8 or S-VHS(C) camcorder, connect the **S-VIDEO** input of the DVD recorder to the appropriate S-VHS output on the camcorder.
You must also connect the audio input **left AUDIO right** on the DVD recorder to the audio output on the camcorder.

Good Picture Quality

If you have a camcorder that only has a single video output (Composite Video, CVBS), connect the **VIDEO** input on the DVD recorder to the appropriate output on the camcorder.
You must also connect the audio input **left AUDIO right** on the DVD recorder to the audio output on the camcorder.

Connecting audio devices to the analogue audio sockets



Two analogue audio sockets **OUT L AUDIO R** (audio signal output left/right) are located at the back of the DVD recorder.

These can be used to connect the following:
- **a receiver with Dolby-Pro-Logic**
- **a receiver with two-channel analogue stereo**

Can I use the 'Phono' input on my amplifier?

This socket (input) on the amplifier is designed only for record players without preamplifiers. Do not use this input for connecting the DVD recorder.
The DVD recorder or the amplifier may be damaged as a result.

Connecting audio devices to the digital audio socket

At the back of the DVD recorder there is a digital audio output socket **DIGITAL AUDIO OUT** for an coaxial cable.

These can be used to connect the following:
- **an A/V receiver or an A/V amplifier with a digital multi-channel sound decoder**
- **a receiver with two-channel digital stereo (PCM)**

Digital multi-channel sound ?

Digital multi-channel sound offers the best possible sound quality. You will need a multi-channel A/V receiver or amplifier that supports at least one of the audio formats of the DVD recorder (MPEG2, Dolby Digital and DTS). Consult the operating instructions for your receiver to find out which audio formats it supports.

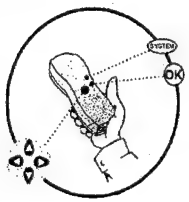
× All I can hear from my loudspeakers is a loud distorted noise

✓ The receiver is not compatible with the digital audio format of the DVD recorder. The audio format of the DVD disc is displayed in the status window when you switch to another language. Playback in six-channel digital surround sound is only possible if the receiver has a digital multi-channel sound decoder.

Problem

3 Installing your DVD recorder

Initial installation



After successfully connecting your DVD recorder to the TV set and other additional devices as described in the previous chapter, this chapter will show you how to start the initial installation. The DVD recorder automatically seeks out and stores all available TV channels.

ENGLISH

Aim correctly with the remote control

In the following sections, you will need the remote control for the first time. Aim the remote control at the DVD recorder and not at the TV set.

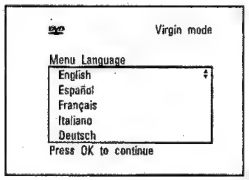
Connecting additional devices

If you have connected additional devices such as a satellite receiver to the aerial cable, switch them on. The automatic channel search will recognise it and save it.

No aerial connected

Even if you only want to use the DVD recorder to play back or have only connected a satellite receiver, you must still complete the initial installation. This is necessary so that the basic settings are stored correctly. Once initial installation is complete you can use the DVD recorder as normal.

Tip

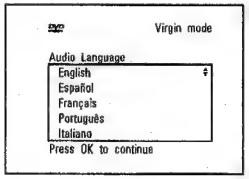


1. Select the desired language for the on-screen menu by pressing ▼ or ▲.

What is an on-screen menu?

The multi-language on-screen menu takes the mystery out of using your new DVD recorder. All settings and/or functions are displayed on your TV screen in the relevant language.

2. Confirm with **OK**.

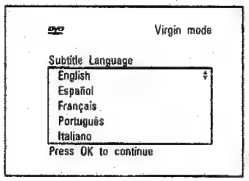


3. Select the desired audio language using ▼ or ▲.

What is an audio language?

The DVD will play the sound in the language you select, provided this language is available on the disc. If it is not available on the disc the fist language on the DVD will be used instead. The DVD Video Disc menu, if available, will also be displayed in the language you select.

4. Confirm with **OK**.

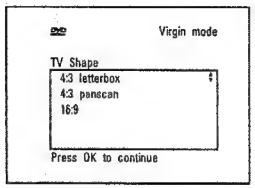


5. Select the desired language for the subtitles by pressing ▼ or ▲.

What is the subtitle language?

The subtitles will be displayed in the language you select, provided this language is available on the disc. If it is not available on the disc the fist language on the DVD will be used instead.

6. Confirm with **OK**.



7. Select the desired screen format position using ▼ or ▲. These settings will only be used if you insert a DVD that contains this information.

Which screen formats can I select?

'4:3 letterbox'	for wide-screen (cinema format) with black borders at the top and bottom of the screen.
'4:3 panscan'	for a full-height picture with cropped edges.
'16:9'	for a wide-screen TV set (screen edge ratio 16:9)

8. Confirm with **OK**.

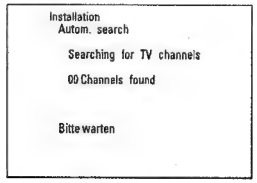
9. Select your country with ▼ or ▲.
If your country does not appear, select *'Other'*.

Why do I have to set the country?

To call up the specific settings for the respective country, you must first install the country.

10. Confirm with **OK**.

11. After you connect the aerial (or cable TV, satellite receiver, etc.) to the DVD recorder, press **OK**.
The automatic TV channel search starts. 'WAIT' will appear on the display.



×The DVD recorder cannot find any TV stations

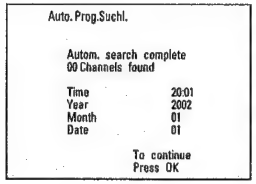
✓ Select channel 1 on the TV set. Can you see the stored TV channel on the TV set?
If not, check the cable connection from the aerial (aerial socket) to the DVD recorder and to the TV set.

✓ Please have patience.
The DVD recorder searches the entire frequency range in order to find and store the largest possible number of TV channels. It is possible that the TV channels in your country are broadcast in a higher frequency range. As soon as this range is reached during the search, the DVD recorder will find the TV channels.

✓ If no aerial is connected, complete the basic settings and then, if desired, start the automatic channel search (see section 'Automatic TV channel search').

Problem

12. When the automatic TV channel search is complete, *'Autom. search complete'* will appear on the TV screen.
'Time', *'Year'*, *'Month'*, *'Date'* will appear on the TV screen.



13. Check if the time in '***Time***' is correct.
14. If required, change the time with the number buttons **0..9** on your remote control.
15. Select the next line with ▲ or ▼.
16. Check if the displayed settings for: '***Year***', '***Month***' and '***Date***' are correct.
17. When all information is correct, save by pressing **OK**.

The initial installation is now complete.

Satellite receiver

If you are connecting a satellite receiver, please read the section on 'Using a satellite receiver'.

Decoder

If you are connecting a decoder, you must install it as described in the next section.

Tip

× Sound may be distorted on some TV channels.

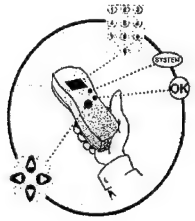
✓ If the sound is distorted on any of the stored TV channels or if there is no sound at all, the wrong TV system may have been stored for the TV channel. Read 'Manual TV channel search' for information on how to change the TV system.

Problem

Using a satellite receiver

TV channels from a satellite receiver (connected to scart socket **EXT 2 AUX I/O**) are received on the DVD recorder on programme number '***EXT2***'.

If necessary, use the **MONITOR** button to switch to the internal tuner.
Then select programme number '***EXT1***' with **0** on the remote control and programme number '***EXT2***' with **CHANNEL −**.
You should select the TV channels to be received by the satellite receiver directly on the receiver itself.



Allocating a decoder

Some TV channels send coded TV signals that can only be viewed properly with a purchased or rented decoder. You can connect such a decoder (descrambler) to your DVD recorder. The following function automatically activates the connected decoder for the TV channel you want to watch.

How do I allocate the decoder for Easy Link?

If your TC=V set supports 'Easy Link' the decoder must be assigned to the relevant TV channel on the TV set (see the operating instructions for your TV set). Settings cannot then be made in this menu.

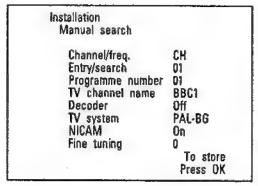
?

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON**.
3. Use the **CHANNEL +** and **CHANNEL −** buttons on the DVD recorder or the number buttons **0..9** on the remote control to select the TV channel for which you want to use the decoder. If necessary, use the **MONITOR** button to switch to the internal tuner.
4. Press the **SYSTEM-MENU** button on the remote control. The menu bar will appear at the top of the screen.
5. Select '⚙' using ◄ or ►.
6. Select line '***Installation***' using ▼ or ▲ and confirm with ►.
7. Select line '***Manual search***' using ▼ or ▲ and confirm with ►.
8. Select line '***Decoder***' using ▼ or ▲.
9. Select function '***On***' with ◄ or ►.

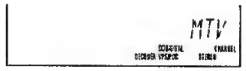
How can I switch the decoder off again?

Select '***Off***' (decoder off) on the TV screen in the line '***Decoder***' using ►.

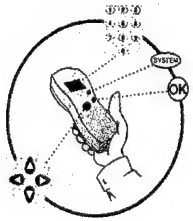
?



10. Confirm with **OK**.
11. To end, press **SYSTEM-MENU**.



Your decoder has now been allocated to this TV channel.
When this TV channel is selected, the 'DECODER' symbol will appear in the DVD recorder display.



Manual TV channel search

ENGLISH

In some cases, not all of the available TV channels may have been found and stored during initial installation. In this case, you will need to search for and store the missing or coded TV channels manually.

Manual search with EasyLink

With 'Easy Link', the DVD recorder will automatically download the TV channels stored on the TV set. This is why some lines have no function. To store new TV channels, they must first be stored on the TV set. The information will then be transferred to the DVD recorder automatically.

Tip

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON**.
3. Press **SYSTEM-MENU** on the remote control. The menu bar appears.
4. Select '⚙' using ◀ or ▶.
5. Select '***Installation***' using ▼ or ▲ and confirm with ▶.
6. Select '***Manual search***' using ▼ or ▲ and confirm with ▶.

```
Installation
  Manual search

    Channel/freq.      CH
    Entry/search       01
    Programme number   01
    TV channel name    BBC1
    Decoder            Off
    TV system          PAL-BG
    NICAM              On
    Fine tuning        0
                       To store
                       Press OK
```

7. In '***Channel/freq.***', select the desired display using ▶

What is hidden behind the settings?

'***Freq.***': Display/entry of frequencies
'***CH***': Display/entry of channels
'***S-CH***': Display/entry of special channels

What is a special channel?

TV signals are transmitted in certain pre-defined frequency ranges. These ranges are divided into channels. A specific frequency/channel is assigned to each TV station. Certain frequency ranges are specified as special channels (hyperband channels).

8. In '***Entry/search***', enter the frequency or channel of the TV station using the number buttons **0..9**.

***I don't know the channel for my TV station**

✓ In this case, press ▶ to start the automatic search. A changing channel number/frequency number will appear on the TV screen. Continue the automatic search until you have found the TV channel you are looking for.

Problem

9. Using ◀ or ▶ in '***Programme number***', select the programme number you want to use for the TV channel, e.g. '***01***'.

How can I change the displayed symbol of a TV channel?

1. In '***TV channel name***', press ▶.
2. Select the desired symbol position using ◀ or ▶.
3. Change the symbol at the symbol position with ▼ or ▲.
4. Select the next symbol position in the same way.
5. Keep pressing ▶ until the cursor disappears.

Tip

How can I change the TV system of the TV channel?

In '***TV system***', use ◀ or ▶ to select the TV system that produces the least distortion of picture and sound.

What is NICAM?

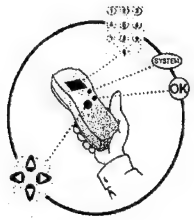
NICAM is a digital sound transmission system. Using NICAM, you can transmit either 1 stereo channel or 2 separate mono channels. However, if reception is poor and the sound distorted you can turn off NICAM.
In '***NICAM***', select '***Off***' using ◀ or ▶.

How can I improve the automatic process for storing channels?

To change the automatic process for storing channels (fine tuning), select '***Fine tuning***'.
Using ◀ or ▶ you can try to fine-tune the TV channel manually.

Experts

10. Press **OK** to store the TV channel.
11. To search for other TV channels, begin again at 9.
12. To end, press **SYSTEM-MENU**.



Sorting TV channels automatically (Follow TV)

When the automatic channel search function is activated, the TV channels are stored in a specific order. This may differ from the order in which the TV channels appear on your TV set.
This function changes the order of the TV channels stored in your DVD recorder to match the order on the TV set.
This only works if the DVD recorder (**EXT 1 TO TV-I/O** socket) and the TV set are **connected with a scart cable.**

What does EASYLINK do?

If your TV set supports 'Easylink,..', TV channels will be stored during initial installation in the same order as they appear on the TV set. To store the TV channels in a different order, you'll need to change the order on the TV set. When you start the Follow TV function the information is transferred again from the TV set.

?

1. Switch on the TV set. If required, select the programme number for the DVD recorder.

2. Switch on the DVD recorder using **STANDBY/ON**.

3. Press the **SYSTEM-MENU** button on the remote control. The menu bar appears.

4. Select '⚙' using ◄ or ►.

5. Select '***Installation***' using ▼ or ▲ and confirm with ►.

6. Select '***Follow TV***' using ▼ or ▲ and confirm with ►.

7. Confirm the message on the screen with **OK**. 'TV 01' will appear in the DVD recorder display.

TV 01

8. Select programme number '1' **on the TV set.**

***I cannot switch my TV set to programme number '1'**

✓ If you have connected additional devices to the **EXT 2 AUX I/O** socket, please disconnect these devices. Other connected devices may have switched the TV set to the programme number of the scart socket.

Problem

9. Confirm with **OK** on the DVD recorder remote control.
'WAIT' will appear on the display. The DVD recorder compares the TV channels on the TV set and the DVD recorder.
If the DVD recorder finds the same TV channel as on the TV set it stores it at 'P01'.

***"NOTV" will appear in the display. The DVD recorder is not receiving a video signal from the TV set.**

✓ Check the connectors at both ends of the scart cable.

✓ Check your TV's operating instructions to see which scart socket is used for video signals.

✓ If the problem persists, you won't be able to use this feature. Please read 'Sorting and clearing TV channels manually'.

Problem

10. Wait until for example 'TV 02' appears in the display.

TV 02

11. Select the next programme number **on the TV set**, e.g. '2'.

12. Confirm with **OK** on the DVD recorder remote control.

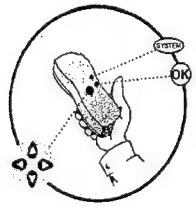
Deleting sorting

You can delete incorrect TV channel sorting by pressing ◄.

Tip

13. Repeat steps 10 to 12 until you have assigned all the TV channels.

14. To end, press **SYSTEM-MENU**.



Automatic TV channel search

During installation, all available TV channels are searched for and stored. If the channel assignments of your cable or satellite TV provider change or if you are reinstalling the DVD recorder, e.g. after moving house, you can start this procedure again. This will replace the stored TV channels with the new ones.

What does Easy Link do?

With Easylink, you can search for and store TV channels only on the TV set. These settings are accepted by the DVD recorder. Use this function to start the transfer of TV channels from the TV set.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.

2. Switch on the DVD recorder using **STANDBY/ON**.

3. Press **SYSTEM-MENU** on the remote control. The menu bar will appear at the top of the screen.

4. Select '⚙' using ◄ or ►.

5. Select line '***Installation***' using ▼ or ▲ and confirm with ►.

6. Select line '***Autom. search***' using ▼ or ▲.

7. Press ►.

Installation
Autom. search

Searching for TV channels

00 Channels found

Bitte warten

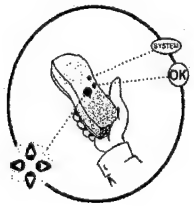
8. The automatic TV channel search starts. This allows the DVD recorder to save all available TV channels. This procedure may take several minutes.

9. When the automatic search is completed, '***Autom. search complete***' will appear on the TV screen.

10. To end, press **SYSTEM-MENU**.

You can read about how to search for a TV channel manually in section 'Adding and clearing TV channels manually'.

Sorting and clearing TV channels manually



After you have performed the automatic channel search you may not agree with the sequence in which the individual TV channels have been allocated to the programme positions (programme numbers). You can use this function to rearrange the TV channels already stored or to delete TV channels you don't want or those with poor reception.

The teletext clock resets automatically

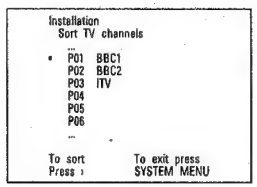
If you store a TV channel which transmits TXT/PDC on programme number 'P01', the date and time will automatically be transmitted and constantly updated. As a result, the changes from summer time to winter time and back again will be made automatically.

Tip

What does Easy Link do?

With Easylink, TV channels can only be searched for and saved on the TV set. These settings are then accepted by the DVD recorder.
That is why you cannot select this function manually.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Turn on the DVD recorder. Press the **SYSTEM-MENU** button on the remote control. The menu bar will appear at the top of the screen.
3. Select '⚙' using ◄ or ►.
4. Select line ***'Installation'*** using ▼ or ▲ and confirm with ►.
5. Select line ***'Sort TV channels'*** using ▼ or ▲ and confirm with ►.



6. Select the TV channel that you want to delete or whose order you want to change using ▼ or ▲.
7. Confirm with ►.

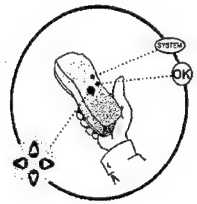
Deleting TV channels

Unwanted channels or those with poor reception can be deleted using **CLEAR**. After that you can continue at step 6.

Tip

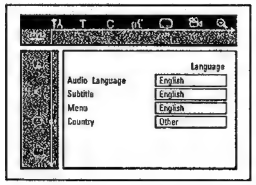
8. Using ▼ or ▲, shift the TV channel to the desired position and press the ◄ button. The DVD recorder will insert the TV channel.
9. Repeat steps 6 to 8 until you have resorted/deleted all desired TV channels.
10. To save, press **OK**.
11. To end, press **SYSTEM-MENU**.

Setting the language/country



You can select the country and the subtitle language as well as the audio language for DVD playback. Please observe that with some DVDs, you can change the audio language and/or subtitle language only via the DVD disc menu.
Moreover, you can set one of the displayed languages for the on-screen menu (OSD). However, the DVD recorder display will only display English text regardless of this setting.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON**.
3. Press **SYSTEM-MENU** on the remote control. The menu bar appears.
4. Select the '⚙' icon using ◄ or ►.
5. Select ***'Language'*** using ▼ or ▲ and confirm with ►.



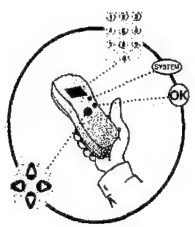
6. Select the appropriate line and confirm with ►.

Which settings can I choose?

Audio Language: Playback language (audio language)
Subtitle: Subtitle language
Menu: Language of the OSD menu
Country: Location (country)

Tip

7. Select the appropriate setting using ▼ or ▲ and confirm with **OK**.
8. To end, press **SYSTEM-MENU**.

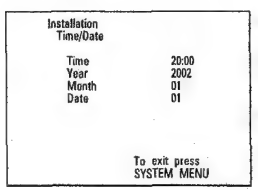


Setting the time and date

If the display shows an incorrect time or '--:--', the time and date must be reset manually.
If a TV channel which transmits TXT/PDC (teletext/PDC) is stored under programme number 'P01', the time and date will automatically be taken from the TXT/PDC information.

ENGLISH

1. Press **SYSTEM-MENU** on the remote control. The menu bar appears.
2. Select the 'T' icon using ◀ or ▶.
3. Select '*Installation*' using ▼ or ▲ and confirm with ▶.
4. Select '*Time/Date*' using ▼ or ▲ and confirm with ▶.



5. Check if the time in '*Time*' is correct. If required, change the time with the number buttons **0..9** on your remote control.
6. Check '*Year*', '*Month*' and '*Date*' in the same way. To move between the fields, use ▼ or ▲.
7. Check the displayed settings and confirm with **OK**. '*Stored*' will appear briefly on the screen.
8. To end, press **SYSTEM-MENU**.

4 Information on the TV screen

You can check and change many of the features and settings on your DVD recorder using the system menu. The menu bar cannot be displayed during recording.

Icons in the menu bar

Use the **SYSTEM-MENU** button to call up and close the menu bar (main menu). You can select the appropriate feature using ◀ and ▶. You confirm a feature using ▼. This takes you to a submenu or executes the feature immediately.
Depending on the current disc, some features may not be available.

Menu bar 1

	User preferences
T	Title/Track
C	Chapter/Index
	Audio language
	Subtitle language
	Camera angle
	Zoom

Menu bar 2

To display menu bar 2, press ▶ while menu bar 1 is displayed.

	Sound
	Frame-by-frame playback
	Slow motion

	Search by time

ENGLISH

Temporary feedback icons

Temporary feedback icons appear in the top left hand corner of the menu bar with information on the different operating modes. This information appears briefly when certain disc features are activated :

	Shuffle: Shuffle play
	Scan
	Repeat entire disc
	Repeat title
	Repeat track
	Repeat chapter
	Repeat from A to end
	Repeat from A to B
	Camera angle
	Child lock active
	Auto resume
	Action not allowed

Status box

The status box displays the current operating mode (status) of the DVD recorder and the current disc type. This display can be switched off.

Disc type icons

	DVD+RW
	DVD+R
	DVD video
	Video CD
	No disc
	Error

Operating mode icons

	Record
	Stop
	Play
	Pause play
	Record pause
	Search forwards (8x speed)
	Search backwards (8x speed)
	Slow motion

Tuner info box

This box appears in the lower left-hand corner of the screen. The aerial signal, the TV channel and name of the TV channel are shown.

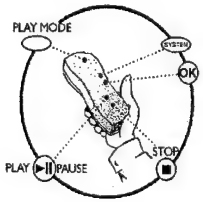
	Current channel/selected input socket
	No signal TV channel is not available/additional device is not connected or is switched off
	Copy-protected signal

Timer information box

This box appears above the tuner information box. When a timer recording is set, it shows the timer icon and the start time or date of the first programme to be recorded.
If no timer recording is scheduled, the current time is displayed.
This box disappears during playback of a disc or after a recording starts.

	Timer starts on the day shown
	OTR recording runs until the stop time displayed
	Current time No timer event programmed

5 Playback



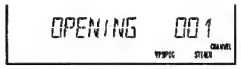
Playback hints

This DVD recorder will play the following systems:
- DVD video
- (Super)Video-CD disc
- DVD+RW disc
- DVD+R Disc
- DVD-RW (videomode, finalised)
- DVD-R
- CD-R
- CD-RW
- Audio CD
- MP3-CD

You can operate the DVD recorder using the remote control or the buttons on the front of the DVD recorder.

ENGLISH

Inserting a disc



1. Press the **OPEN/CLOSE** button on the front. The disc tray opens. The dialog box shows *'OPENING'* and then *'TRAY OPEN'*.
2. Insert the disc carefully into the tray, with the label uppermost and press **PLAY/PAUSE►II** or **OPEN/CLOSE**. The dialog box shows *'CLOSING'* and then *'READING'*. The information on the disc is read.

How do I insert a double-sided DVD?

Double-sided discs are not printed on either side. The labelling is in the centre on each side of the disc. The labelling of the side you wish to play must be uppermost.

Opening/closing the tray using the remote control

You can open and close the disc tray using the remote control.
Press and hold the **STOP ■** button on the remote control until the dialog box shows *'OPENING'* or *'CLOSING'*.

Tip

3. Playback begins automatically.

DVD VIDEO DVD VIDEO

A menu may appear during playback of a DVD. In case titles and chapters are numbered, press a number button on the remote control. You can also select a menu item using ◄, ►, ▲, ▼ and confirm with **OK**.
For further information, read chapter 'Playing a DVD video disc'.

RW DVD+ReWritable

During the playback of a DVD+RW, the index screen overview appears. Choose the title you want to play back using ▼, ▲, ⏮, ⏭.
Confirm with **OK**.
For further information, read chapter 'Playing a DVD+RW/+R disc'.

COMPACT DISC DIGITAL AUDIO

If the playback does not start automatically, press **PLAY/PAUSE►II**
For further information, read chapter 'Playing an audio CD'.

COMPACT DISC DIGITAL VIDEO

If the '■' symbol appears in the display, start playback by pressing **PLAY/PAUSE►II**. If a menu appears on the screen, use the remote control buttons indicated on the screen to select the menu option you want (PREV=⏮, NEXT=⏭) or with the number buttons **0..9**.
For further information see ' Playing a (Super) Video CD'.

Playing a DVD video disc

× 'PIN' will appear on the display

✓ The child lock was activated for the inserted disc. Read section 'Access control' and 'Authorising a disc' and in chapter 'Access control (child lock)'.

× The menu on the screen is showing an 'X'

✓ Some DVD discs can be manufactured so that certain steps are required before the disc can be played, or so that only limited operation is possible during playback. When an 'X' appears on the screen the selected feature is not possible.

× The screen is showing regional code information

✓ Since DVD films are not normally released in all parts of the world at the same time, all DVD players have a specific regional code. Discs can be given a regional code. If the regional codes differ between the player and the disc, playback is not possible.

✓ The regional code is shown on the label on the back of the machine.

✓ The regional code does not apply to recordable DVD discs.

× The screen is prompting me to choose an option from the menu.

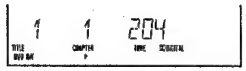
✓ Select the option you want using ▲, ▼, ◄, ► or the number keys **0..9**.
In some cases you need to confirm with **OK**.
You can also access the menu using **DISC-MENU** on the remote control.

Problem

How can I access hidden information?

1. Press the **DISC-MENU** button on the remote control. A menu will appear on the screen. For some feature films this may appear after an introductory sequence.
2. Select the option you want using ▲, ▼, ◄, ► or the number keys **0..9**.
Confirm with **OK**.

Tip



1. If playback does not start automatically, press **PLAY/PAUSE ►II** .
   The display shows:
   title, chapter, time elapsed.
2. To stop the disc, press **STOP ■** on the remote control or **■STOP** on the DVD recorder.
3. To eject the disc, press **OPEN/CLOSE** on the front of the DVD recorder.

Playing a DVD+RW/+R disc

1. If the disc is write-protected or a finalised DVD+R disc, playback starts automatically.

2. If playback does not start automatically, select the title you want to watch from the Index Picture Screen using ▼ or ▲ .
   You can also use the ⏮ or ⏭ buttons on the front of the set.
3. Press **PLAY/PAUSE ►II** .
   The display shows:
   title number, recording quality.

×I see the message 'EMPTY DISC' in the display
✓ There are no recordings on this disc.

Problem

4. To stop the disc, press **STOP ■** on the remote control or **■STOP** on the DVD recorder.
5. To eject the disc, press **OPEN/CLOSE** on the front of the DVD recorder.

What should I note when playing back different recording types (qualities)?

The correct recording quality '*HQ*(*HQ*), *SP*+(*SP*+), *EP*(*EP*), *EP*+(*EP*+)' will automatically be selected during playback.
For more information, please read section 'Selecting the recording type (Quality)' in chapter 'Manual recording'.

Playing an audio CD

You can use your DVD recorder to play audio CDs

1. Insert an audio CD. Playback starts automatically.

Audio CD display'

If the TV is on, the audio CD screen appears automatically

During play, the current track number and its elapsed playing time will show on the TV screen and on the recorder display.

Tip

2. Stop playback using **STOP ■** . The number of tracks and the total time are displayed.

Playing an MP3 CD

MP3 (MPEG1 Audio Layer-3) files are highly compressed music files. Using this technology the data volume can be compressed by a factor of 10. This means it is possible to record 10 hours of music in CD quality on a single CD-ROM.

When creating MP3 CDs please note the following:
Supported file system: ISO9660, Joliet
Supported formats: *.mp3
File names: maximum 64 ASCII characters (Joliet)
Maximum of 99 albums, 999 tracks
Supported sampling frequencies: 44.1kHz, 48kHz. Files with lesser than 44.1kHZ will be skipped.
Supported bit rate: 32, 64, 96, 128, 192, 256 (kbps)
ID3 Tag: Version 1, 1.1. If the version is higher, the directory name is used for the album and the filename for the track.

Important notes for playback:
In agreement with SDMI the digital audio output will not work during MP3 playback.
Only the first session of a multi-session CD will play back.

1. Insert an MP3 CD. Playback starts automatically.

MP3 CD display

If the TV is on, the MP3 CD screen appears automatically

During playback, the current track number and its elapsed playing time will show on the TV screen and on the recorder display.
During interrupted playback (**STOP ■**), the current track number will show on the TV screen and on the recorder display.

If available in the so-called ID tag, more information will be displayed on: album, track, and artist.

Tip

2. Stop playback using **STOP ■** . The number of albums will be shown in the display.

Additional playback features

Select the previous or next title with ⏮ or ⏭ .

Choose the previous or the next album using ▲ or ▼ .
Choose the previous or next title with ◀ or ▶ .
You can also use the number buttons **0..9** on the remote control to enter the number of the album/track.

You can also use **T/C** to select titles and albums.

1. Press **T/C** and then select symbol 'T' for album or 'C' for title with ▶ or ◀ .
2. Select the number of the album/title with ▼ , ▲ or with the number buttons **0..9** on the remote control.

You can also use repeat functions (Button **PLAY MODE**).

Tip

ENGLISH

Playing a (Super) Video CD

(Super) Video CDs may be equipped with PBC (Play Back Control). This means that special playback functions (menus) can be directly selected. The Video CD must be PBC-compatible (see CD packaging).
'PBC' is turned on by default.

1. Insert a (Super) Video CD and press **PLAY/PAUSE ►II** .
   If the '■' symbol appears in the display, start playback by pressing **PLAY/PAUSE ►II** .
2. If a menu appears on the screen, use the remote control buttons indicated on the screen to select the menu option you want (PREV= ⏮ , NEXT= ⏭) or with the number buttons **0..9** .
   If the PBC menu contains a title list, the desired title can be chosen directly.
3. The **RETURN** button will take you back to the previous menu.
4. Stop playback using **STOP ■** .

6 Additional playback features

Changing to another title/chapter

If there is more than one title or chapter on the disc, follow the instructions to change to another title or chapter. If there are several chapters within the title, these will be shown. It is possible to select these titles using the menu bar.

1. During playback use the ⏭ button to move to the next title/chapter. Pressing ⏮ takes you to the start of the current title or chapter. Pressing ⏮ twice takes you to the start of the previous title or chapter.

Using T/C (title/chapter)

1. Press **T/C** (title/chapter) and select the appropriate title using ▲ or ▼ .
   Ensure that the 'T'(Title) icon is selected in the menu bar.
2. Using **T/C** you can select chapters within the title. Press **T/C** and select the 'C' (Chapter) icon using ▶ .
   Select the appropriate chapter using ▲ or ▼ .

Tip

Searching a disc

You can search the disc for a recording at 4x or 32x playback speed. Additional playback speeds are available via menu bar (▶▶).

1. During playback, press and hold ⏮ (reverse) or ⏭ (forwards) to switch to the search feature. You can switch between the playback speeds using ⏮ / ⏭ .
2. To continue playback press **PLAY/PAUSE ►II** twice at your chosen location.

× No sound
✓ The sound is switched off in search mode. This is not a fault in your machine.

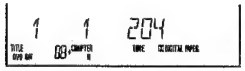
Problem

Search function via menu bar

1. During playback press **SYSTEM-MENU** on the remote control. The menu bar will appear at the top of the screen.
2. Select the '▶▶' icon using ▶ or ◀ and confirm with ▼ .
3. Using ◀ or ▶ you can now select different speeds forwards or backwards.
4. If necessary hide the menu bar using **SYSTEM-MENU** .
5. To continue playback, press **PLAY/PAUSE ►II** .

Tip

Still picture



1. During playback, press **PLAY/PAUSE ►II** to stop the disc and display a still picture.

Frame-by-frame playback via menu bar

1. During the still picture press **SYSTEM-MENU** on the remote control. The menu bar will appear at the top of the screen.
2. Select the '' icon using ► or ◄ and confirm with ▼ button.
3. Using ◄ or ► you can now scroll back or forwards one frame at a time.
4. If necessary hide the menu bar using **SYSTEM-MENU**.
5. To continue playback, press **PLAY/PAUSE ►II**.

Tip

Slow motion

1. During playback, press **PLAY/PAUSE ►II** on the remote control. Then hold down **I◄◄** or **►►I** to switch to slow motion.
2. You can choose between the various speeds using **I◄◄** or **►►I**.

Slow motion over the menu bar

1. During playback, press **PLAY/PAUSE ►II** on the remote control and then press **SYSTEM-MENU** The menu bar will appear at the top of the screen.
2. Select the '' symbol using ► or ◄ and confirm with ▼.
3. Using ◄ or ► you can now select various slow motion speeds backwards or forwards.
4. If necessary hide the menu bar using **SYSTEM-MENU**.

Tip

3. To continue playback, press **PLAY/PAUSE ►II** twice.

Search by time

Using this feature you can select where playback should start (select elapsed time).

1. During playback press **SYSTEM-MENU** on the remote control. The menu bar will appear at the top of the screen.
2. Select the '' symbol using ► or ◄ and confirm with ▼. Playback is stopped and a box appears on the screen showing the elapsed time.
3. Enter the start time with the digit keys **0..9** from where playback should start.

4. Confirm with **OK**.

*** The time entered will flash**

✓ The selected title is shorter than the time entered. Enter a new time or end the function using **SYSTEM-MENU**.

Problem

5. Playback starts before the time entered.

Repeat/Shuffle play

You can mark entire sections or the whole disc for endless playback. Depending on the type of disc (DVD video, DVD+RW, video CD) you can select a chapter, title or the entire disc.

1. Select the desired chapter, title or the entire disc and start playback.
2. During playback, press **PLAY MODE**. By pressing **PLAY MODE** again you can chose from the following options:
   - •) '': repeat chapter – DVD only
   - •) '': repeat title/track
   - •) '': repeat entire disc (Video CD, Audio CD only)
   - •) '': Shuffle play
   - •) display disappears: no repeat
3. To switch off the repeat, press **STOP ■**.
   You can also press **PLAY MODE** repeatedly until the Icons disappear.

Repeat sequence (A-B)

You can repeat a certain sequence within a title/chapter. You have to mark the start and end of the desired sequence.

1. During playback press at the start of the sequence **PLAY/PAUSE ►II**.
   You see a still picture.
2. Press **PLAY MODE** until the '' icon appears on the screen. This marks the start point.
   Press **PLAY/PAUSE ►II** to start playback.
3. At the desired end point, press **OK**. '' appears on the TV screen. The disc will only play between the selected points.
4. To switch off the repeat, press **STOP ■**.
   You can also press **PLAY MODE** repeatedly until the Icons disappear.

Scan feature

This feature plays back the first 10 seconds of each chapter (DVD) or track (CD).

1. During playback, press **PLAY MODE**. Select '—' using **PLAY MODE**.
2. After 10 seconds the DVD recorder switches to the next chapter/index. To start playback at the corresponding chapter/index, press **STOP ■** and then **PLAY/PAUSE ►II**.

Zoom feature

The Zoom feature allows you to enlarge the video image and pan through the enlarged image.

1. During playback, press **PLAY/PAUSE ►II**. The DVD recorder switches to 'PAUSE'. You will see a still picture.
2. Press **SYSTEM-MENU** and select the '🔍' icon using ►.
3. Select the required zoom factor using ▼ or ▲.
4. When *'press OK to pan'* appears on the screen, the zoom process is complete.
5. Press **OK**. Using ▲, ▼, ►, ◄ select the part of the image you wish to view.
6. Confirm with **OK**.
7. To stop the feature, press **PLAY/PAUSE ►II** and then **SYSTEM-MENU**.

Camera angle

If a DVD video contains sequences recorded from different camera angles you can change the camera angle for playback.

1. During playback, press **PLAY/PAUSE ►II**. You will see a still picture.
2. Press **SYSTEM-MENU** and select the '📷' icon using ►.

Problem

✗ **The '📷' icon is not visible**

✓ The selected scene was not recorded from different camera angles. That is why you cannot select this feature. For more information please read the 'cover text' on your DVD video disc.

3. Select the required camera angle using ▼ or ▲. You can also enter the number directly using the number buttons **0..9**.
4. After a short delay, playback changes to the new camera angle. The '📷' icon remains displayed until multiple angles are no longer available.

Changing the audio language

Pre-recorded DVD videos often come with multiple audio languages. Playback uses the language you selected during initial installation. You can change the audio language of the current disc at any time.
You can change the audio language either using the menu of the inserted disc (**DISC-MENU** button) or the menu bar (**SYSTEM-MENU** button). The audio languages for DVD playback in the two menus may be different.

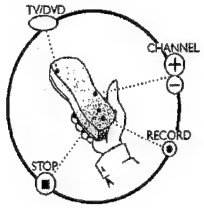
1. During playback press **SYSTEM-MENU** and select the '🔊' icon using ►.
2. Select the required audio language using ▼ or ▲. You can also enter the number directly using the number buttons **0..9**.
3. Play continues in the new audio language.

Subtitles

Pre-recorded DVD videos often come with subtitles in several languages. Playback uses the language you selected during initial installation. You can change the subtitle language of the current disc at any time.
You can change the subtitle language either using the menu of the inserted disc (**DISC-MENU** button) or the menu bar (**SYSTEM-MENU** button). The subtitle languages in the menus may differ.

1. During playback press **SYSTEM-MENU** and select the '💬' icon using ►.
2. Select the required subtitle language using ▼ or ▲. You can also enter the number directly using the number buttons **0..9**.
   You can switch off subtitles again with **0** or by pressing *'off'*.
3. Playback continues in the new subtitle language.

7 Manual recording



General information

Which discs can I use for recording?

With this DVD recorder, you can record on two types of DVD:

DVD+RW

This disc can be written to and then the contents deleted.

DVD+R

This type of disc can only be recorded once.

If you want to play this DVD in a DVD player it must be finalized using the '***Finalise disc***' function. It is not possible to make further recordings using this disc.

If this disc is to be played in a DVD recorder it must not be finalised. Recordings can be added and deleted. The disc space (playback time) from the deleted recording cannot be recovered for further recordings

ENGLISH

Use the 'Manual recording' feature to spontaneously start recording (e.g. to record a TV show already in progress).

In the 'Index Picture screen' select the title to be overwritten or '***Empty title***' using ▼ and ▲.

If you want to record between existing recordings, check the length of the old recording and the length of the new recording. If the new recording is too long, the following recording (title/chapter) will be overwritten.

Insert new recordings at the end of all existing recordings (Safe Record)

To add a new recording at the end of the last recording on the disc, hold down the **REC/OTR ●** button until the message 'SAFE REC' appears on the display.

For DVD+R discs each new recording is always added at the end of all previous recordings as existing recordings cannot be overwritten.

Tip

If you want to start and stop a recording manually, read **'Recording without automatic switch-off'.**

If you want to start a recording manually but stop it automatically, read **'Recording with automatic switch-off'** (e.g. not to record to the end of the disc)

Read **'Automatic recording from a satellite receiver'**, if you want a recording to be controlled automatically by a satellite receiver.

Read **'Direct record'** if you want to record a programme currently being shown.

Recording without automatic switch-off

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Insert a disc to be used for the recording. The system and content of the disc will be checked. 'READING' will appear on the display.

× Index display

✓ A DVD+RW disc was inserted that already contains recordings. Use ▲ and ▼ to select a location where the recording should be started.

× 'EMPTY DISC' appears in the display

✓ The inserted DVD disc is empty.

× A dialog box appears asking if the contents should be erased or the disc should be ejected

✓ The inserted disc is a DVD+RW disc whose contents are not compatible with DVD Video (e.g. a data disc). This disc cannot be used for recordings until the entire disc is erased using the **REC/OTR ●** button.

× 'Too many titles' appears on the screen when a recording is attempted

✓ A disc can only contain a max. of 48 titles (including the empty titles). Erase the titles or change the disc.

Problem

3. If necessary, switch to the internal tuner on the DVD recorder using the **MONITOR** button on the remote control.
4. Select the programme number (station name) you wish to record using **CHANNEL +** or **CHANNEL −**. The following will appear on the display:

Station name

If a TV station transmits a station name it will be shown in the display.

Programme number of the external inputs:

'EXT1' Scart socket at the back **EXT 1 TO TV-I/O**

'EXT2' Scart socket at the back **EXT 2 AUX I/O**

'CAM1' SVHS-/Audio front sockets **S-VIDEO / left AUDIO right**

'CAM1' Video/audio front sockets A/V **VIDEO / left AUDIO right**

Switching between sockets **S-VIDEO** and **VIDEO** is done automatically. In case both sockets are used, the signal received at socket **S-VIDEO** is treated with priority.

'CAM2' Digital Video (i Link) front socket **DV**

Tip

5 To start recording, press **REC/OTR ●** on the remote control or **RECORD** on the DVD recorder. If you want to start the recording at the end of the existing recordings, hold down the **REC/OTR ●** button until the message *'SAFE RECO'* appears on the display.
For DVD+R discs each new recording is always added at the end of all previous recordings as existing recordings cannot be overwritten.
On the display will appear e.g.:

Inserting chapter markers

During recording it is possible to mark scenes that you want to see or hide later.
During recording press **EDIT** at the relevant location. The screen displays ***'Inserting marker'***. The 'CHAPTER' number is increased by one in the display box.
For more information on titles and chapters please see the section 'Changing to another title/chapter' in the chapter 'Playback'.

Tip

6 You can stop recording by pressing **STOP ■** on the remote control or **■STOP** on the recorder. *'MENU UPDT'* will appear on the display. The DVD player is preparing the list of contents. Wait until this message disappears in the display, then the recording is completed.

*** The display will read** *'DISC ERR'*
✓ The recording could not be completed correctly because of a disc error. Check and, if necessary, clean the inserted disc.

Problem

Making recordings on DVD+R discs compatible

If you want to play back the recording on a DVD player, you need to finalise the disc in the DVD recorder. You can prepare your DVD for use in a DVD player using the ***'Finalising'*** feature. See the section 'Finalising DVD+R discs' in chapter 'Managing the disc contents'.

Tip

Interrupt recording (Pause)

1 During recording press **PLAY/PAUSE ►II** , for example to avoid recording the commercials.

2 To continue recording, press **REC/OTR ●** .

End recording

To end the recording, press the **STOP ■** button. Wait until *'MENU UPDT'* disappears from the display.

Tip

Recording with automatic switch-off (OTR – One Touch Recording)

1 Insert a disc.

2 Use **CHANNEL +** or **CHANNEL −** to select the programme number (channel name) you want to record.

3 Press **REC/OTR ●** on the remote control.

4 Each time you press **REC/OTR ●** you will add 30 minutes to the recording time.

How can I cancel the recording time I have just set?

To cancel the entry, press the **CLEAR** button while the recording time is displayed.

Protecting the disc against accidental recording

To prevent an important recording from being accidentally erased, you can protect the entire disc. You can only protect the disc as a whole. It is not possible to protect an individual recording.

What happens with DVD+R discs?

As long as these discs are not finalised, they can be protected against accidental erasure in the same way as DVD+RW discs.

1 Insert the disc you wish to protect.

2 Press **DISC-MENU** . The Index Picture Screen appears.

3 While the Index Picture Screen is displayed, press the **STOP ■** button on the remote control. The first title is marked.

4 Press **▲** . This takes you to the disc info screen.

5 Press the **►** button.
Select ***'Protection'***.
Confirm with **►** .

6 Select ***'Protected'*** using **▼** and confirm with **OK** .

7 Quit using **◄** and then **DISC-MENU** .

The entire disc is now protected. If you try to record onto this disc the message 'DISC LOCK' will appear in the display and *'Disc locked'* on the screen.

Lining up recordings within a title (assemble cut)

ENGLISH

You can add further recordings to a title already contained on a DVD+RW disc. This recording will be added to the title as a so-called 'chapter'. Existing information will be overwritten from this location onward. Depending on the length of the recording, this will also overwrite titles that follow the current title. The recording mode (quality) is automatically transferred from the current title.
To play back this recording, press **SYSTEM-MENU** and select 'C' (chapter) using ▶. You can also use **T/C**.

For more information, read section 'Changing to a different title/chapter' in chapter 'Playback'.

What happens with DVD+R discs?
New recordings on 'DVD+R' discs can only be added after existing recordings.
It is not possible to overwrite existing recordings on 'DVD+R' discs.

1. Find the title in the Index Picture Screen where you want to insert the new recording.
2. Look at the last minute of the old recording (playback)
3. Press **PLAY/PAUSE ►II** on the remote control at the position where the new recording is to go. '**II**' will appear on the display.
4. To monitor the recording you can switch to the internal tuner using **MONITOR**.
5. Now start recording as usual by pressing **REC/OTR ●** on the remote control.
   The new recording will be inserted.
6. Stop recording with **STOP ■**.

Selecting the recording mode (quality)

By selecting a recording mode, you define the picture quality of recordings and the maximum recording time for a disc.
You can check the quality by switching to a recording mode and then watch the picture via the built-in tuner (**MONITOR** button).
For playback, the correct picture quality will automatically be selected.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. On the front of the DVD recorder select the recording quality using **REC MODE**.
   You can also use the button **REC. MODE** on the remote control.

Which recording types can I choose?
'*HQ/HQ*': HighQuality offers the best picture quality and a recording time of 60 minutes.
'*SP+/SP+*': StandardPlay (pre-recorded DVD quality) offers excellent picture quality with a recording time of 150 minutes.
'*EP/EP*': ExtendedPlay (better than VHS quality). Recording time 240 minutes.
'*EP+/EP+*': 6 hours (VHS picture quality). Recording time 360 minutes.

Can I select the recording type via a menu as well?
1. Press the **SYSTEM-MENU** button.
2. Select '↑↓' symbol with ◀ or ▶.
3. Select *'Record settings'* using ◀ or ▶ and confirm with ▶.
4. In the line *'Rec Mode'* select the recording type with ▼ or ▲.
5. Confirm using **OK** and **SYSTEM-MENU**.
6. If you have selected the recording type '*EP/EP*' or '*EP+/EP+*', you can select the settings *'Stndrd'* (Standard) or *'Sport'* (fast movements) in the *'Filter mode'* line.

Tip

Automatic recording from a satellite receiver (Sat Recording)

You can use this feature if you own a satellite receiver that can control other devices via a scart cable and a programming feature (Timer). For more information, please see the operating instructions for the satellite receiver.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Press **SYSTEM-MENU** on the remote control. The menu bar appears.

3. Select '⚙' using ◄ or ►.

4. Select line ***'Record settings'*** using ▼ or ▲ and confirm with ►.

5. Select ***'Sat record'*** using ▼ or ▲.

6. Select ***'EXT2'*** with ◄ or ►.

Switching off 'Sat Recording'
To switch off the feature, select ***'Off'*** using ► or ◄.

Tip

ENGLISH

7. Confirm with **OK**.

8. Use a scart cable to connect the scart socket **EXT 2 AUX I/O** on the DVD recorder to the corresponding scart socket on the satellite receiver.

9. Quit using **SYSTEM-MENU**.

10. Insert a disc that you want to use for recording.

11. Programme the satellite receiver with the required information (programme number of the TV channel, start time, end time).
If necessary, please see the operating instructions for your satellite receiver.

12. Switch off the DVD recorder with **STANDBY** ⏻. '⏻' appears in the display to show the activated feature.

The DVD recorder is now ready to record. The beginning and end of the recording is controlled via the scart socket **EXT 2 AUX I/O**.

'Direct Record'

Can I instantly record the TV channel I want, even though the DVD recorder is switched off? No problem. If recording is started manually, the DVD recorder, when it is **switched off**, is set to the current TV channel on the TV set using the scart cable.
You will find more information on how to switch 'Direct record' on or off in the next section 'Direct Record'.

How does Direct Record work?
The DVD recorder uses the scart cable to compare the TV channel selected on the TV set with its stored TV channels. If the same TV channel is found, the DVD recorder switches to the corresponding programme number and starts recording.
During this search please do not change the TV channel on the TV. This may affect the tuning of the DVD recorder.

1. On the TV set, select the programme number you want make the recording from.

2. Press **REC/OTR** ● with the DVD recorder **switched off**.

'NO TV' will appear on the display.
✓ The DVD recorder is comparing its stored TV channels with those on the TV set. Please do not change the TV channel on the TV set while 'SRCH' is displayed.

'NO TV' appears in the display
✓ This TV channel could not be found in the DVD recorder's memory. Check that all the TV channels stored on the TV set are available on the DVD recorder. If necessary, store any missing channels. Please read paragraph 'Manual TV channel search' in the chapter 'Installing your DVD Recorder'.
✓ Check the connectors at both ends of the scart cable.
✓ Check your TV's operating instructions to see which scart socket is used for video signals.
✓ If the problem persists, you won't be able to use this feature.

Problem

3. Stop recording with **STOP** ■.

Switching 'Direct Record' on or off

1. Switch on the TV set. If required, select the programme number for the DVD recorder.

2. Press **SYSTEM-MENU** on the remote control. The menu bar appears.

3. Select '⚙' using ◄ or ►.

4. Select ***'Record settings'*** using ▼ or ▲ and confirm with ►.

5. Select ***'Direct Record'*** using ▼ or ▲.

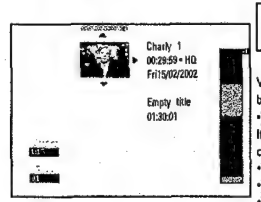
6. Select ***'On'*** (Direct Record on) or ***'Off'*** (Direct Record off) using ◄ or ►.

7. Confirm with **OK**.

8. Quit using **SYSTEM-MENU**.

9. Switch off with **STANDBY** ⏻.

8 Managing the disc contents



General Information

When a recording is made to disc, the following additional information is also stored at the beginning of the recording:
•) Name of the recording
If the TV station does not transmit a name, only the channel number and time will be stored as the name
•) Length of the recording
•) Record type (Quality)
•) Date of the recording
•) Index picture of the recording

ENGLISH

A marker will be set every 5-6 minutes if the '***Auto chapters***' function is activated in the '***Record settings***' menu. This marker is known as a 'chapter'.
These markers can be changed when the recording has finished.

Can markers be set on a DVD+R disc?
Markers can be set on these discs if they have not been finalised.

It is also possible to add 'chapters' later. This means that scenes you do not want to see during playback, such as commercials, can be hidden or skipped. During playback you can watch your recording as a continuous sequence without the hidden chapters.

Read section '**Disc settings**', to change general settings of the disc.

Read '**Editing recording titles (name)**' to find out how to change a name.

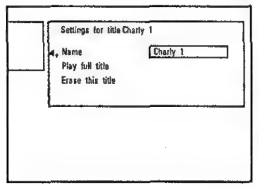
Read '**Playing back titles**' to find out how to play back the entire recording including the hidden chapters.

Read '**Erasing a recording/title**' to find how to erase titles and the accompanying recording.

Read '**Favourite scene selection**' to find out how to split the title into chapters and how to manage the chapters.

Editing recording titles (name)

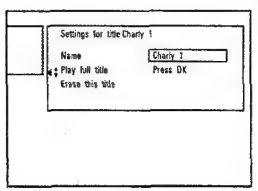
Some TV stations transmit the title (name) of a programme. In this case, the name will be included automatically (e.g. 'ROCKY'). Otherwise, the channel number and time of the recording are stored as the name. The name of the recording can only be changed after the recording has been completed.



1. Press the **STOP** ■ button or during playback press **DISC-MENU**.
2. Using ▲ or ▼ select the title whose name you want to edit and confirm with ▶. The menu for editing names appears.
3. Select '***Name***' using ▲ or ▼ and confirm with ▶.
4. Using ▶ or ◀ select the position where the letter/number/icon is to be changed/re-entered.
5. Change the icon using ▲ or ▼. You can switch between upper and lowercase using **SELECT**. You can delete the character using **CLEAR**.
6. Repeat 4 and 5 until you have made the changes you want.
7. Save the new name with **OK**. '***Storing name***' appears on the TV screen for confirmation.
8. To end, press ◀.

Playing back titles

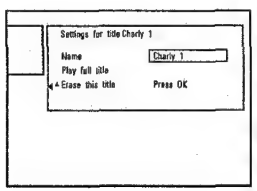
If you have hidden certain chapters of a title, with this setting you can view the entire title including the hidden chapters. Proceed as follows:



1. Press the **STOP** ■ button or during playback press **DISC-MENU**.
2. Using ▲ or ▼ select the title that you want to play back and confirm with ▶. The menu for editing titles appears.
3. Select '***Play full title***' using ▲ or ▼ and confirm with **OK**.
4. Playback begins automatically. The full title – including the hidden chapters - is played back.

Erasing a recording/title

You can erase individual recordings from a disc. Follow the instructions below:

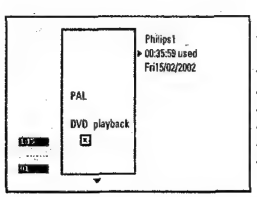


1. Press the **STOP ■** button or during playback press **DISC-MENU**.
2. Using ▲ or ▼ select the title to be erased and confirm with ▶. The menu for editing titles appears.
3. Using ▲ or ▼ select '***Erase this title***' and confirm with **OK**. The screen will show '***This will completely erase this title***', '***Press OK to confirm***'.
4. If you want to erase the title press **OK**. To end, press ◀.
5. The screen will show '***Erasing title***'.
6. '***Empty title***' will now appear in this position in the Index Picture Screen. A new recording can now be made at this position.
   If the deleted title was very short (shorter than 1 minute) no '***Empty title***' will be displayed.

Can titles be deleted from a DVD+R disc?

Titles on DVD+R discs are only marked as deleted. '***Deleted title***' will appear in the display instead of '***Empty title***'. During playback the 'deleted' title is skipped. The space used for this title cannot be used again as the title has not been physically deleted. Once the disc has been finalised no further changes can be made.

Disc settings



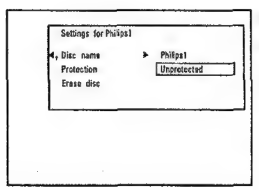
This screen appears **before** the first title and contains general information about the current disc.

You can:
- change the name of the disc
- activate or deactivate write protection on the disc
- Finish editing (make edits DVD compatible)
- Finalising DVD+Rs
- Erasing DVD+RWs

Follow the instructions to get to this screen:

1. Press the **STOP ■** button or during playback press **DISC-MENU**.
2. Select the first title using ▲ or press **STOP ■**.
3. Press the ▲ button. The Disc Info screen will appear.

Changing the disc name



1. In the Disc Info screen press ▶. The '***Settings for***' menu appears on the TV screen.
2. Select '***Disc name***' using ▲ or ▼ and confirm with ▶.
3. Using ▶ or ◀ select the position where the letter/number/icon is to be changed/re-entered.
4. Change the icon using ▲ or ▼. You can switch between upper and lowercase using **SELECT**. You can delete the character using **CLEAR**.
5. Repeat 3 and 4 until you have made the changes you want.
6. Save the new title with **OK**. '***Storing name***' appears on the TV screen for confirmation.
7. To end, press ◀.

Finalising a disc

Even if one or more titles have been edited, a DVD player may still show the original title. You can prepare your disc so that a DVD player will be able to read the edited title.

1. In the Disc Info screen press ▶. The '***Settings for***' menu will appear on the screen.
2. Select '***Make edits compatible***' using ▲ or ▼ and confirm with **OK**.

× '***Make edits compatible***' **does not appear**
✓ Your disc is already compatible. No conversion is necessary.
To end, press **SYSTEM-MENU**.

3. The screen displays '***This will take...***' to show how long the process will last.
4. To confirm press **OK**. The screen will show '***Working...***'. A bar will move from left to right indicating the progress of the conversion.

ENGLISH

Finalising DVD+R discs

This feature is required to play back a DVD+R disc in a DVD player. Once the disc has been finalised no further recordings or changes can be made.

1. In the Disc Info screen press ▶ . The *'Settings for'* menu appears on the TV screen.
2. Select *'Finalise disc'* using ▲ or ▼ . and confirm with **OK** .

Problem

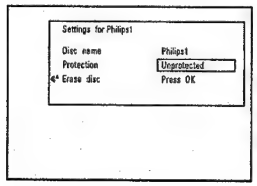
× ***'Finalise disc'* does not appear**
✓ Either there is no DVD+R disc inserted or the disc is already finalised. To end, press **SYSTEM-MENU** .

× ***'Settings for'* does not appear**
✓ If the disc has been recorded on another DVD recorder, the menu may not appear. In this case, use the *'Finalise disc'* feature in the 'T|A' menu, under *'Features'*.

3. The screen displays *'This will take'* to show how long the process will last.
4. To confirm press **OK** . *'Working'* appears on the TV screen. A bar will move from left to right indicating progress.

Erasing DVD+RW disks

1. In the Disc Info screen press ▶ . The *'Settings for'* menu will appear on the screen.



2. Select *'Erase disc'* using the menu buttons ▲ or ▼ . Confirm with the menu button **OK** . The screen will show *'This will erase all titles Press OK to confirm'*.
3. If you want to erase all titles press **OK** . Otherwise press ◀ to end.
4. The screen will show *'Erasing disc'*.
5. Once the disc has been successfully erased the Index Picture Screen will show the empty area of the disc.

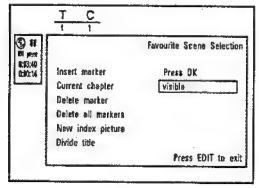
Favourite Scene Selection

In this menu, you can adjust a title to your personal preferences. You can insert/delete chapter markers, hide chapters, select a new index screen, or split the title. Display this menu during playback using **EDIT** on the remote control.

Inserting chapter markers

During playback you can set and erase chapter markers within a title.
The maximum number of chapters per disc is 124 and 99 per title. If one of these numbers are reached, the following message appears: *'Too many chapters'*. Some markers must be erased before new markers can be added.

1. During playback press **EDIT** on the remote control at the appropriate position. The *'Favourite Scene Selection'* menu will appear on the screen.



2. Confirm *'Insert marker'* using **OK** . The screen displays *'Inserting marker'*.

Tip

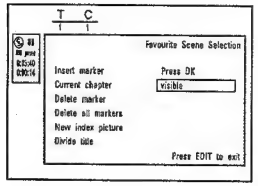
'X' will appear on the screen:
This DVD is write-protected or the disc is a finalised DVD-R. Subsequent changes cannot be made.

3. To stop the feature, press **EDIT** .

Hiding chapters

By default all chapters are visible. Chapters (such as commercials) can be hidden during playback or made visible again. In editing mode, hidden chapters are shown greyed out.

1. During playback of the appropriate chapter press **EDIT** on the remote control. The *'Favourite Scene Selection'* menu will appear on the screen.



Tip

How do I select other chapters?
1. Press ' T/C ' on the remote control. The title and chapters are shown at the top of the screen.
2. Using ▶ or ◀ select Title(T) or Chapter (C).
3. Using ▲ or ▼ select the title or chapter you wish to edit.

2. Select *'Current chapter'* using ▼ .

3. Using ▶ select *'hidden'*. The picture is shown darker.

Switching quickly
You can switch between show chapters (*'visible'*) and hide chapters (*'hidden'*) quickly and easily using **SELECT**.

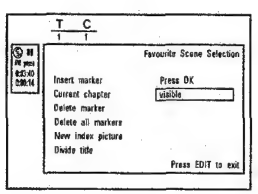
Tip

4. To end, press **EDIT**.

During playback this chapter will be skipped.
If the chapter is not visible, select *'visible'* in step 3 with ▶.

Erasing chapter markers

You can erase all or some of the markers within a title.



1. During playback of the appropriate chapter press **EDIT** on the remote control. The *'Favourite Scene Selection'* menu will appear on the screen

How do I select other chapters?
1. Press ' **T/C** ' on the remote control. The title and chapters are shown at the top of the screen.
2. Using ▶ or ◀ select Title(T) or Chapter (C).
3. Using ▲ or ▼ select the title or chapter you wish to edit.

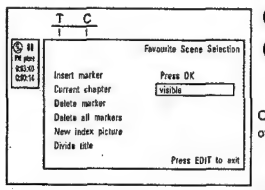
Tip

2. Using ▼ select *'Delete marker'* for this chapter or *'Delete all markers'* for all chapters within the selected title.
3. Confirm with **OK**.
4. To end, press **EDIT**.

Changing the index picture

Normally the first picture of a recording is used as the index picture. You can however choose any picture from the recording as the index picture.

1. During playback, search for location of the new index picture. Press the **PLAY/PAUSE►II** button.
2. Press the **EDIT** button. The *'Favourite Scene Selection'* menu appears on the TV screen.



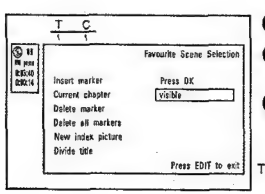
3. Select line *'New index picture'* and confirm with **OK**.
4. Start the change with **OK**. *'Updating menu'* appears on the TV screen.

Once the revision has been completed successfully the DVD recorder reverts to the index overview.

Dividing titles

It is possible to divide a title into several separate parts (titles). Each of these parts (titles) is indicated by a separate index picture.
Please note: This division cannot be reversed

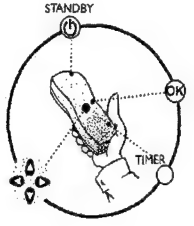
Can I also divide titles on DVD+R discs?
As recordings on DVD+R discs cannot be overwritten, it is not possible to divide titles.



1. During playback of the appropriate title press **EDIT** on the remote control. The *'Favourite Scene Selection'* menu will appear on the screen
2. Select *'Divide title'* and confirm with **OK**.
3. If you are sure, start the process by pressing **OK**. The screen will show *'Dividing title'*.
4. Wait until the new title appears with an index picture in the Index Picture overview.

The title is now successfully divided.

9 Programming a recording (TIMER)



General information

ENGLISH

Use programmed recording (TIMER) to automatically start and stop a recording at a later date. The DVD recorder will switch to the right program number and begin recording at the correct time.
With this DVD recorder, you can pre-program up to 6 recordings within a period of one month.

To make a programmed recording, your DVD recorder needs to know:
* the date you want to make the recording
* the program number of the TV channel
* the start and stop time of the recording
* VPS or PDC on or off
* the recording mode (*'HQ/SP+/LP/EP+'*).

This information is saved in a TIMER block.

What is 'VPS/PDC'?

'VPS' (Video Programming System)/ 'PDC'(Programme Delivery Control) are used to control the start and duration of TV channel recordings. If a TV programme starts earlier or ends later than was scheduled, the DVD recorder will still switch itself on and off and the correct times.

What do I need to know about 'VPS/PDC'?

Usually the start time is the **same** as the VPS or PDC time. But if your TV guide gives a VPS or PDC time which is different from the programme's start time, e.g. '20.15 (VPS/PDC 20.14)', you must enter the **VPS/PDC time '20.14' exact to the minute** as the start time.
If you want to programme a time that is different from the VPS or PDC time, you must switch off VPS or PDC.

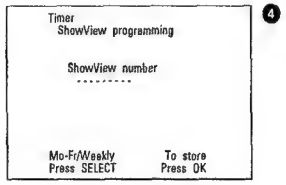
Only one TV programme on a TV channel can be controlled using 'VPS/PDC' at a time. If you want to record two or more TV programmes on a TV channel using 'VPS/PDC', you will need to programme these as two separate recordings.

Programming a recording (with 'ShowView ® ')

SHOWVIEW®

Thanks to this programming system, you no longer need to tediously enter the date, programme number, start and end times. All the information needed by the DVD recorder for programming is contained in the ShowView® - programming number. This 9-digit ShowView® - number is found in most TV listings magazine.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Press **TIMER** on the remote control.
   The programming method last selected is marked.
3. Select *'ShowView programming'* using ▼ or ▲ and confirm with ▶ .



4. Enter the entire ShowView number. This number is up to 9 digits long and can be found next to the start time of the TV programme in your TV listings magazine.
   e.g.: 5-312-4 or 5 312 4
   Enter 53124 for the ShowView number.
   If you make a mistake, you can clear it with **CLEAR** .

Selecting daily/weekly recordings
Using **SELECT** , select from the following options:
'Mo-Fr': Repeated daily recordings from Monday to Friday.
'Weekly': Repeated weekly recordings (every week on the same day).

Tip

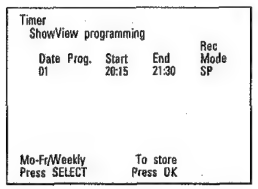
5. Confirm with **OK** .

× **The following message appears on the screen: *'Please enter programme number'***
✓ The programme number of the TV channel has not yet been assigned to the ShowView number. Using ▶ and ◀ or the number buttons **0..9** on the remote control, select the corresponding programme number (name) of the TV channel and confirm with **OK** .

× **The following message appears on the screen: *'ShowView number wrong'***
✓ The ShowView number entered is incorrect. Correct your entry or cancel using the **SYSTEM-MENU** button.
✓ Check the time/date (see 'Setting the time and date' in 'Installing your DVD recorder'.

× **The following message appears on the screen: *'Weekend programming not possible'***
✓ A daily recording was entered for the wrong day. Daily programming can only be used for recordings to be made from Monday to Friday.

Problem



6 The decoded information appears after confirmation. You can go back at any time to change the information. Select the appropriate input field using ▶ or ◀. If required, change the information using **CHANNEL +**, **CHANNEL −** or the number buttons **0..9**.

Tip

Switching on 'VPS/PDC' in the '*Start*' input field

Select the '*Start*' input field using ▶. Using **SELECT** switch on 'VPS/PDC' ('*' lights up). If you press **SELECT** again, you will switch 'VPS/PDC' off ('*' disappears).

Changing the recording quality in the '*End*' input field

Select the '*End*' input field using ▶. Using **SELECT**, select the recording mode '*HQ, SP+, EP, EP+*'.

7 If all the information is correct, press the **OK** button. The programming information is stored in a TIMER block.

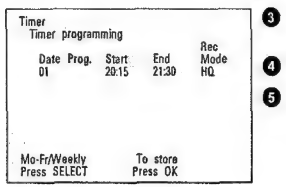
8 To end, press **TIMER**.

9 Load a DVD (unprotected) ready for recording.
The current disc is checked.

10 Switch off with **STANDBY** ⏻.
The programmed recording will only function properly if the DVD recorder has been **switched off** using the **STANDBY** ⏻ button.

If any of the TIMER blocks are in use, '⏲' will light up on the display.

Programming a recording (without ShowView®)



1 Switch on the TV set. If required, select the programme number for the DVD recorder.

2 Press **TIMER** on the remote control.
The programming method last selected is marked.

3 Select '***Timer programming***' with ▼ or ▲. and confirm with ▶.
The current information will appear on the screen.

4 Select the input field with ◀ or ▶.

5 Enter information with ▼ or ▲ or with the number buttons **0..9**.

Tip

Selecting daily/weekly recordings

In '*Date*' use **SELECT** to select from the following options:
'*Mo-Fr*': Repeated daily recordings from Monday to Friday
'*Mo*': Repeated weekly recordings (every week on the same day, e.g. Monday).

Programme numbers of scart sockets '*EXT1*' and '*EXT2*'

You can also programme recordings from external sources via scart socket **EXT 1 TO TV-I/O** ('*EXT1*') or **EXT 2 AUX I/O** ('*EXT2*').

'Switching on 'VPS/PDC' in the '*Start*' input field

Select the '*Start*' input field using **TIMER**. Using **SELECT** switch on 'VPS/PDC' ('*' lights up). If you press **SELECT** again, you will switch 'VPS/PDC' off ('*' disappears).

Changing the recording quality in the '*End*' input field

Select the '*End*' input field using **TIMER**.
Using **SELECT**, select the recording mode '*HQ, SP+, EP, EP+*'.

6 If all the information is correct, press **OK**. The programming information is stored in a TIMER block.

7 To end, press **TIMER**.

8 Load a DVD (unprotected) ready for recording.
The cassette is being checked.

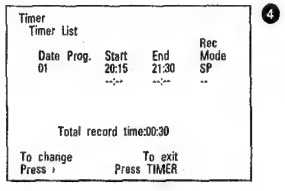
9 Switch off with **STANDBY** ⏻.
The programmed recording will only function properly if the DVD recorder has been **switched off** using the **STANDBY** ⏻ button.

If any of the TIMER blocks are in use, '⏲' will light up on the display.

How to check, change or delete a programmed recording (TIMER)

ENGLISH

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Press **TIMER** on the remote control.
   The programming mode last selected is marked.
3. Select *'Timer List'* with ▼ or ▲ , and confirm with ▶ .
4. Select the programmed recording (TIMER) you want to check, change or delete with ▼ or ▲ .



Delete programmed recording

1. Press the **CLEAR** button.
2. Confirm with **OK**. *'Timer Cleared'* will briefly appear on the TV screen.
   '– –:– –' appears rather than the displayed values
3. To end, press **TIMER**.

Tip

5. Press ▶ .
   Select the input field with ◀ or ▶ .
   If required, change the information with **CHANNEL +** , **CHANNEL –** or the number buttons **0..9** .
6. Confirm with **OK**.
7. To end, press **TIMER**.
8. Switch off with **STANDBY** ⏻ .

'NexTView Link'

This DVD recorder is equipped with the 'NexTView Link' function. If your television is also equipped with this feature, you can mark TV programmes on the television for programming. These TV programmes will automatically be transmitted to a TIMER block on the DVD recorder. If you clear this marking on the television, the corresponding TIMER block on the DVD recorder will also be cleared.
For more information, read the instruction manual for your TV set.

Problem solving for programmed recordings

PROBLEM	SOLUTION
DVD recorder is not responding	✓While a programmed recording is being made, you cannot operate your recorder manually. If you want to cancel the programmed recording, press **STANDBY** ⏻ .
'*Switch off, timer recording*' flashes on the TV screen.	✓The DVD recorder was switched on several minutes before the start of a programmed recording. Switch off the DVD recorder with **STANDBY** ⏻ . A programmed recording (timer) will only function if the DVD recorder is switched off (button **STANDBY** ⏻).
Error message: '*Insert recordable disc*'	✓Either no disc has been inserted or you cannot record to this disc. Insert a disc that you can record onto. Switch off the DVD recorder using **STANDBY** ⏻ .
The error message '*Disc locked*' appears briefly on the screen.	✓A write-protected disc has been inserted. Cancel the protection (see 'Preventing accidental erasing of discs' in 'Manual Recording') or insert a different disc.
Error message: '*Memory full*'	✓If this error message appears after pressing **TIMER** , then all the TIMER blocks are already programmed. No more recordings can be programmed. Press the ▶ button. If you want to clear or check a programmed recording (TIMER block), select it with **CHANNEL +** or **CHANNEL –**
The '*Data error*' message appears on the screen.	✓The data for the recording could not be transferred. Please check the date, start time and end time of the programmed recording.
'*Collision*' appears on the screen.	✓The information for two programmed recordings overlap. ✓If you ignore this error message the TV programme with the earlier start time will be recorded first. You will miss the start of the second programme. ✓Change the information for one of the recordings. ✓Delete one of the recordings

10 User preferences

In this section you will learn how to set your user preferences on the DVD recorder. The symbols have the following meanings:

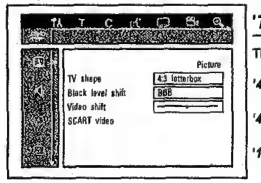
	Picture setting
	Sound setting
	Language setting
	Additional settings
	Remote control settings
	Recording settings
	Installation

ENGLISH

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Press **SYSTEM-MENU** on the remote control. The menu bar appears.
3. Select the '' icon using ◄ or ► and confirm with ▼ .
4. Select the appropriate feature using ▼ or ▲ and confirm with ► .
5. Select the corresponding line using ▼ or ▲ and confirm with ► .
6. Select the appropriate feature using ▼ or ▼ or the setting using ◄ or ► .
7. Confirm the setting with **OK** .
8. Quit the menu item using ◄ .

Picture settings

You can choose the following features in this menu:



'TV shape'

The picture signal from your DVD Recorder can be set to match your TV screen:

'4:3 letterbox' : for a 'wide-screen' picture with black bars at the top and bottom

'4:3 panscan' : for a full-height picture with the sides trimmed

'16:9' : for a wide-screen TV set (screen edge ratio 16:9)

'Black level shift'

Adapts the colour dynamics for NTSC playback

'Video shift'

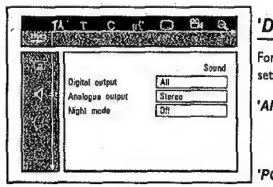
Use this feature to adjust the position of the picture on your TV left or right using ◄ , ► to suit your TV set.

'SCART video'

By default the recorder is set to ***'RGB'***. Select ***'S-Video'*** if you want to connect an S-VHS recorder.

Sound settings

Depending on which audio outputs are used, you can select the settings in this menu.
If you only use the analogue audio output (**OUT L AUDIO R**), select the settings ***'Off'*** in the ***'Digital output'*** menu.



'Digital output'

For devices connected to the **DIGITAL AUDIO OUT** socket, you can select from the following settings.

'All': Dolby Digital and DTS signals are fed unaltered to the digital output. MPEG-2 multi-channel signals are converted to PCM (Pulse Code Modulation).
For receivers/amplifiers **with digital multi-channel sound decoders.**

'PCM only': Dolby Digital and MPEG-2 multi-channel signals are converted to PCM (Pulse Code Modulation).
For receivers/amplifiers **without digital multi-channel sound decoders.**

'Off': Digital output switched off.
For devices **with analogue audio input.**

'Analogue output'

For devices connected to the analogue audio output (**OUT L AUDIO R**), you can select from the following settings.

'Stereo': For devices without DolbySurround or TruSurround. Use this setting if the DVD recorder is only connected to a stereo TV set.

'Surround': Dolby Digital and MPEG-2 multi-channel are mixed down to a DOLBY surround-compatible two-channel output signal. For recorders**with Dolby Surround Pro Logic decoder .**

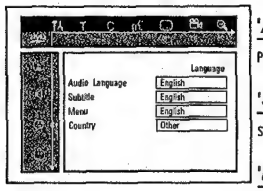
'3D sound': The six channels of the digital surround sound (Dolby Digital, MPEG-2) are mixed down to a two-speaker output signal. All original audio information is retained The result is an impression of being surrounded by several loudspeakers.
For TruSurround compatible devices.

'Night mode'

Night mode optimises the sound for playback at low volume. You are therefore less likely to disturb your neighbours. This only works for Dolby Digital audio on DVD-video discs.

Language settings

You can choose the following settings in this menu:



'Audio Language'

Playback audio language*Audio Language'*,

'Subtitle'

Subtitle language

'Menu'

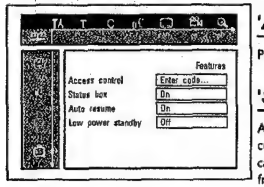
Screen menu language

'Country'

'Country'

Additional settings

You can select the following functions in this menu:



'Access control'

Please read the next chapter 'Access control (child lock)'

'Status box'

Along with the on screen menu, the OSD (On Screen Display) also displays information on the current operating status (counter, playback, recording, TV channel, etc.) on the TV screen. You can switch off the information about the operating status to avoid recording it when recording from additional devices.

'On': The OSD information appears in every selected mode for a few seconds and disappears again.

'Off': The OSD information is switched off. It is **no longer** displayed on the screen.

Auto resume

If playback of a pre-recorded DVD video disc or video CD is interrupted (button **STOP** ■ or **OPEN/CLOSE**) when the disc is reloaded (disc is started) playback starts at the precise location where it stopped. This applies not only to the current disc but to the last 20 discs played.

This feature can be switched off if not required.

Low power standby

To save power, you can switch off the clock display on the DVD recorder. Programmed (TIMER) recordings will still take place.

'On': If the DVD-Recorder is switched off (button **STANDBY** ⏻), the clock display is also switched off.

'Off': If the DVD-Recorder is switched off (button **STANDBY** ⏻), the clock display is visible.

'PBC'

This line appears only if a VCD is loaded.
This function lets you activate or deactivate the PBC menu (Playback Control) for video CDs. See 'Playing a (Super) Video CD'.

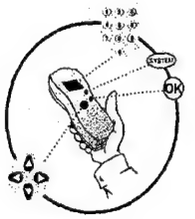
Remote Control settings

In this menu you can set the remote control type to which your DVD recorder should respond to.

'DVD player': The DVD recorder responds to a DVD player remote control.
The DVD recorder also responds to the remote control of a DVD player (remote control code RC-6). Choose this setting if your Philips TV remote supports DVD functions.

'DVD recorder': The DVD recorder only responds to the supplied remote control.

11 Access control (Child Lock)



Child lock (DVD and VCD)

This feature enables discs to be locked for children.
When Child Lock is on, a 4-digit code (PIN) needs to be entered before a disc can be played.
You can also decide whether the inserted disc should always be played or should be played only once, despite the child lock

ENGLISH

•)'*Play always*':
This disc is stored in a memory with space for 50 child-safe discs. If more than 50 discs are stored, the last disc in the list is removed and the new disc is added. The screen shows 'Child safe' at the start of playback.

•)'*Play once*':
This disc is only authorised for single playback. If the recorder is switched off, the PIN code must be re-entered.

Activating/deactivating child lock

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON**.
3. Press **SYSTEM-MENU**. The menu bar appears
4. Select the 'T' icon using ◄ or ►.
5. Select '***Features***' using ▼ or ▲ and confirm with ►.
6. Confirm '***Access control***' using ►.
7. Enter a 4-digit code of your choice. Enter the same code again as confirmation.
8. Select '***Child lock***' using ▲ or ▼ and confirm with ►.
9. Select the '🔒' icon using ▼ or ▲.
10. Confirm with **OK**.
11. Quit the feature using ◄ and **SYSTEM-MENU**.

Unauthorised discs can only be played by entering the four-digit PIN code.
To deactivate the child lock, select the '🔓' icon in 9.

Authorising a disc

1. Insert a disc. The access control box will appear after a short delay.
2. Using ▲ or ▼ select '***Play once***' or '***Play always***'.
3. Enter your PIN code using the number buttons **0..9**.

Double-sided DVDs may have a different ID for each side. For these discs, each side must be authorised. Multi-volume video CDs may have a different ID for each volume. For these CDs, each volume must be authorised.

Locking unlocked discs

To lock a disc that was formerly authorised follow the instructions below

1. Insert a disc. Playback starts automatically. If the playback does not start automatically, press **PLAY/PAUSE ►II**.
2. Press the **STOP ■** button while the '—unlock—' icon is visible. The icon changes to '—locked—'. The disc is now locked.

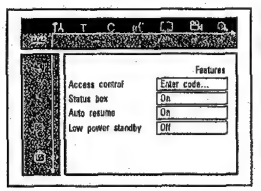
Parental level control (DVD video only)

Films on pre-recorded DVD discs may contain scenes not suitable for children. Therefore, some discs may contain 'Parental Control' rating information that applies to the entire disc or to certain scenes on the disc.

If the disc is rated, scenes are rated from 1 to 8 If such a scene is detected during playback, it compares the scene with the filter value set on the DVD recorder. If the filter value is higher that the setting, an alternative scene is played back where possible.

Activating/deactivating parental level control

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON**.
3. Press **SYSTEM-MENU**. The menu bar appears
4. Select the 'T' icon using ◄ or ►.
5. Select '***Features***' using ▼ or ▲ and confirm with ►.



6. Confirm '***Access control***' using ▶ .
7. Enter a 4-digit code of your choice. If the code is new, you may have to enter the code a second time as confirmation.
8. Select the '***Parental level***' using ▲ or ▼ and confirm with ▶ . A bar appears to select the parental level.
9. Select the appropriate rating using ▼ , ▲ or the number buttons **0..9** .

What do the ratings mean?
Rating 0 (displayed as '--') parental control not active.
Rating 1 (suitable for children)
Rating 8 (only suitable for adults)
What happens if a DVD scene contains a higher level than the rating set?
If the recorder does not find a suitable alternative, playback will stop and you must enter the four-digit code.
Tip

10. Confirm with **OK** . Quit using ◀ and **SYSTEM-MENU** .

Changing the country

The set filter values depend on the respective country. It is therefore necessary to enter the country to which these filter values apply.

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON** .
3. Press **SYSTEM-MENU** . The menu bar appears
4. Select the 'T' icon using ◀ or ▶ .
5. Select line '***Features***' using ▼ or ▲ and confirm with ▶ .
6. Confirm the line '***Access control***' using ▶ .
7. Enter your four-digit code.
8. Select '***Change country***' using ▼ or ▲ and confirm with ▶ .
9. Select the corresponding country using ▲ or ▼ and confirm with **OK** .
10. To end, press ◀ and then **SYSTEM-MENU** .

Changing the PIN code

1. Switch on the TV set. If required, select the programme number for the DVD recorder.
2. Switch on the DVD recorder using **STANDBY/ON** .
3. Press **SYSTEM-MENU** . The menu bar appears
4. Select the 'T' icon using ◀ or ▶ .
5. Select '***Features***' using ▼ or ▲ and confirm with ▶ .
6. Confirm '***Access control***' using ▶ .
7. Enter your four-digit PIN code.
8. Select '***Change code***' using ▲ or ▼ and confirm with ▶ .
9. Enter the new code using the number buttons **0..9** . Enter the same code again as confirmation.
10. Quit using ◀ and **SYSTEM-MENU** .

I have forgotten my code
Press **STOP** ■ four times, then press **OK** . Access control is now switched off. You can now enter a new code as described above.
Tip

12 Before you call an engineer

If you have any problems using this DVD recorder, the reason may be one of the following. You can also call the **customer service centrein** your country.
The telephone numbers can be found on the back of this instruction manual.
Have the model number (MODEL NO) and the production number (PROD.NO) of your recorder ready.
The serial number (PROD. NO.) is printed on the type plate at the back.

ENGLISH

PROBLEM	SOLUTION
Your recorder does not respond to any button being pressed and the display shows 'TV ON ':	✓Recorder in Initial installation mode: Switch on the TV, switch over to the DVD recorder socket. Now the menu for language selection should appear. Please read paragraph 'Initial Installation' in the chapter 'Installing your DVD Recorder'.
The device does not react when you press a button, although the remote control works:	✓'Dealer-Mode' is switched on: All buttons on the front of the set are locked. Switch off the function: ❶ Pull out the mains plug from the wall outlet. ❷ Press and hold down ■**STOP** and **OPEN/CLOSE** and put back the mains plug into the wall outlet. ❸ As soon as the time or '--:--' appears in the display (ca. 6 - 10 seconds), release ■**STOP** and **OPEN/CLOSE**.
Your DVD recorder does not respond to any button being pressed:	✓There is no power supply: check the power supply ✓A programmed recording (Timer) is currently being made: If desired, cancel the programmed recording (Timer) with **STANDBY** ⏻. ✓There is a technical problem: disconnect from the mains power supply for 30 seconds, then connect again. If this doesn't help, you can reset your DVD recorder to the default factory settings.
Resetting the machine to the default factory settings	✓**Important:** All the information stored (TV channels, time and date, TIMER) will be lost. ❶ Disconnect from the mains power supply. ❷ Press and hold down the **STANDBY/ON** button on the device and reconnect to the mains power supply. ❸ Release the **STANDBY/ON** button when 'TV ON ' appears on the display. All the information stored (TV channels, time and date, TIMER) will be lost. Please read paragraph 'Initial Installation' in the chapter 'Installing your DVD Recorder'.
Remote control does not work:	✓Remote control not pointed toward the DVD recorder: Point the remote control at the machine. ✓There is a technical problem: Take out the batteries, wait for 10 seconds and put them in again. ✓Batteries are flat: Change the batteries.

PROBLEM	SOLUTION
No playback on DVD recorder:	✓There is no recording on the disc: Change disc. ✓You inserted the wrong disc type: Your recorder can play back the following disc types: DVD Video, (Super)Video CD, DVD+R(W), Audio CD, , MP3 CDs ✓You inserted the disc the wrong way: Insert the disc with the label facing upwards ✓Disc is dirty: Clean the disc ✓Wrong region code: The region code of the DVD and the DVD recorder must match. ✓Parental control is on: Read chapter 'Access control (child lock)' ✓You have selected the wrong programme number for the DVD recorder on the TV: on the TV, select the correct programme number for the DVD recorder. ✓The cable connecting the TV set and the DVD recorder has come loose: check the cable.
I cannot playback (Super) Video CDs	✓It is possible that this (Super) Video CD contains a menu and the 'PBC' is switched off. You can see this in status field '***PBC OFF***'. To activate this function, proceed as follows: ❶ Press **SYSTEM-MENU** while the (Super) Video-CD is inserted. ❷ Select '⚙' using ◄ or ►. ❸ Select line '***Features***' using ▼ or ▲ and confirm with ►. ❹ Select '**On**' in line '***PBC***' using ▼ or ▲. ❺ Confirm with **OK** and end with **SYSTEM-MENU**.
Poor playback on DVD recorder: (distorted picture/distorted sound)	✓Your TV set is not properly adjusted. ✓Disc is dirty: Clean the disc ✓Sometimes the picture may be temporarily distorted. This is not a defect of your DVD recorder.
No recording possible:	✓The TV channel you want to record is not stored or you selected the wrong programme number: Check TV channels stored. ✓Disc write-protected (recording protected): Remove write-protection or change the disc. For more information, please see 'Preventing accidental erasing of discs' in chapter 'Manual Recording'. ✓An already finalised DVD+R has been inserted: Change disc.
Programmed recording does not work:	✓You have programmed the wrong time or date: Check time/date. ✓You have not set the TIMER properly: Check the programmed recordings (TIMER block). ✓Locked disc inserted: Remove disc lock. ✓An already finalised DVD+R has been inserted: Change disc. ✓'VPS/PDC' switched on but 'VPS/PDCtime' wrong: 'Enter 'VPS/PDCtime exactly to the minute. Check the aerial.
The wrong TV channel was decoded (entered) after you programmed a recording using ShowView.	❶ Enter the ShowView programming number of the TV channel you want. ❷ Confirm with **OK**. ❸ Check the programme number/channel name in the '***Prog.***' input field ❹ If this does not correspond to the TV channel you want, select the input field and change the programme number/channel name. ❺ Confirm with **OK**.
There is picture or sound interference on TV reception:	✓Switch to recording mode 'HQ' with **REC MODE** during playback from the internal TV tuner (**MONITOR** button). This will help achieve the best possible picture quality. Before recording, select the recording mode as described in chapter 'Manual Recording', section 'Selecting the recording mode (quality)'. ✓Have your aerial checked. ✓You will find information on how to change the TV system in 'Manual TV channel search' in 'Installing your DVD recorder'.

PROBLEM	SOLUTION
Distorted sound coming from a connected hi-fi amplifier	✓The DVD recorder is connected to the 'Phono-input' of your amplifier. This socket is provided only for record players without a preamplifier. Select a different audio input.
The picture is distorted or black-and-white during playback	✓The TV system of the disc does not match that of your TV set (PAL/NTSC). ✓The recording can be made in colour only when the TV channels or the connected additional device send a colour signal. Black-and-white signals containing no color information (colour subcarriers) cannot be recorded.
No sound signal at the digital output	✓Check whether the sound settings match the selected inputs and connected additional devices. ✓Check whether you have inserted an MP3 CD. In accordance with SDMI (Secure Digital Music Initiative), the digital audio output is turned off during MP3 playback. This is not a defect of your DVD recorder.
A DVD+RW disc cannot be played on certain DVD players	✓If a recording is too short, it is possible that a DVD player cannot detect it: Please observe the following 'Minimum recording times': Recording mode '***HQ***': 5 minutes, '***SP+***': 15 minutes, '***EP***': 20 minutes, '***EP+***': 30 minutes ✓Some DVD players cannot play back DVD+RW recordings. You can solve this problem by using a special function. You can solve this problem by using a special function: ❶ Open the disc tray with **OPEN/CLOSE** . Insert the disc but do not close the tray. ❷ Hold down the number button **2** on the remote control until the tray closes. The disc is modified. ❸ If this fails to produce the desired result, repeat the procedure using the number button **3** on the remote control. ❹ You can restore the disc to its original condition by pressing **1** . **Warning!** There is a risk that you can no longer play the disc on other DVD players after this procedure. Therefore, apply this function with particular care.
Other disc errors	✓If it is impossible to play back a disc, you can try and repair it for new recordings using the following function. This will only prepare the disc for erasing. It will not be erased, however, until the recording has been completed. ❶ Clean the disc. ❷ Open the disc tray with **OPEN/CLOSE** . Insert the disc but do not close the tray. ❸ Hold down **CLEAR** on the remote control until the tray closes. The disc is prepared for erasing. ❹ Start recording as with an empty disc.

4. Mechanical Instructions

4.1 Service Positions

4.1.1 Front

Front

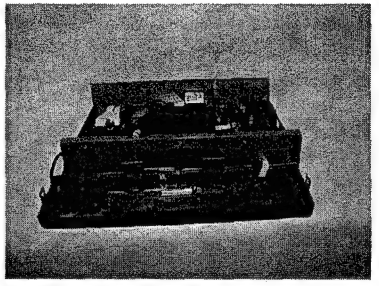


Figure 4-1

4.1.2 DVIO board

To put the DVIO board in a service position, an extender board must be used. This extender board can be ordered with codenumber 3104 128 07770.

DVIO Extender

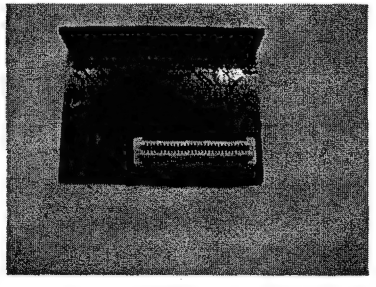

Figure 4-2

DVIO 1

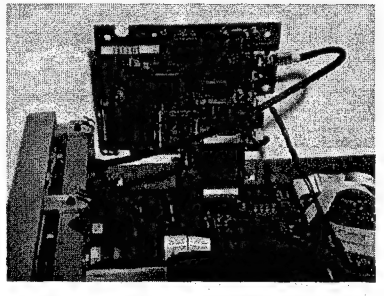

Figure 4-3

DVIO 2

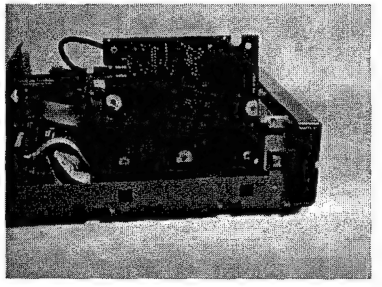

Figure 4-4

4.1.3 Digital board

After demounting of DVIO board, the top side of the digital board is in reach. To reach the bottom side of the digital board, the DVDR module must be demounted together with the digital board. Connected to each other, the assembly can be set in a service position. In this position, the bottom side of the digital board and the servo board are in reach to be serviced.

Digital 1

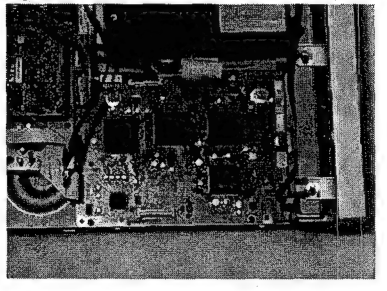

Figure 4-5

Digital 2

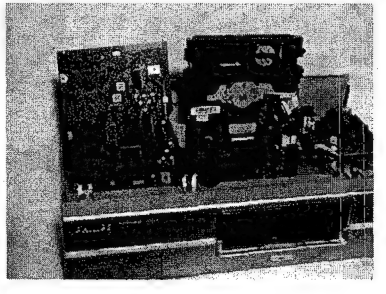

Figure 4-6

4.1.4 Analog board

To put the analog board in service position, demount the assembly of analog board and backplate as follows:

1. Remove the screw from the backplate to the mains inlet of the power supply
2. Remove the screw safety holder
3. Remove the 3 screws of the analog board to the frame
4. Release the snap of the spacer of the analog board to the frame.

Turn the assembly of the back plate and the analog board against the loader.

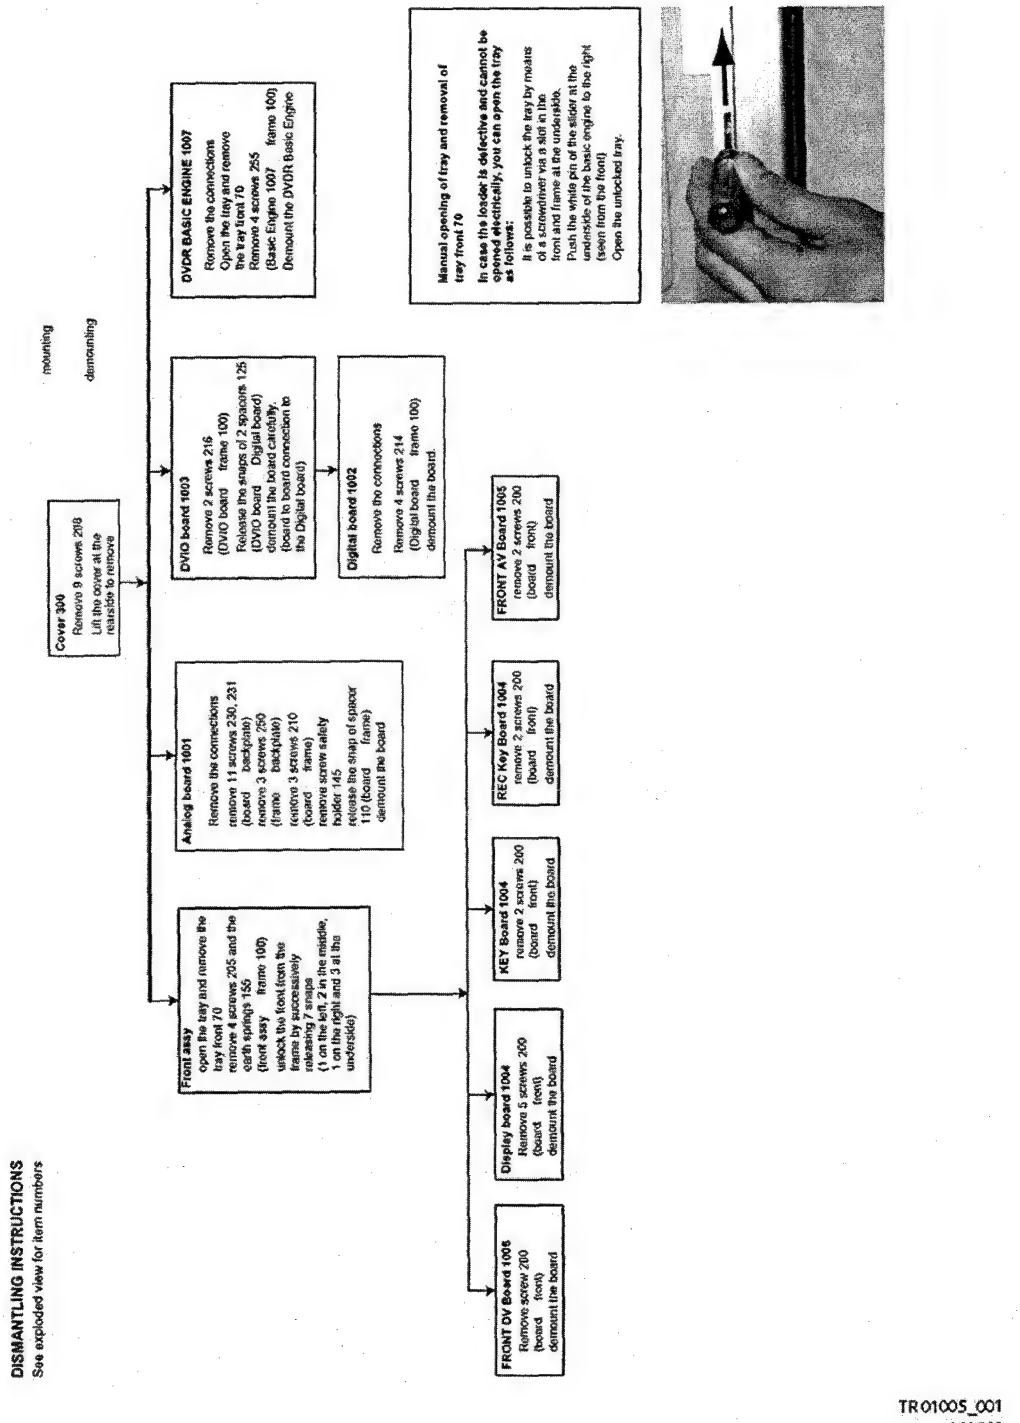

Figure 4-14

5. Diagnostic Software

Due to the complexity of the DVD recorder, the time to find a defect in the recorder can become long. To reduce this time, the recorder has been equipped with Diagnostic and Service software (DS). The DS offers functionality to diagnose the DVDR hardware and tests the following:

- Interconnections between components
- Accessibility of components
- Functionality of the audio and video paths

This functionality can be accessed via several interfaces:

1. End user/Dealer script interface
2. Player script interface
3. Menu and command interface

5.1 End User/Dealer Script Interface

5.1.1 Description

The End user/Dealer script interface gives a diagnosis on a stand alone DVD recorder; no other equipment is needed. During this mode, a number of hardware tests (nuclei) are automatically executed to check if the recorder is faulty. The diagnosis is simply a "fail" or "pass" message. If the message "FAIL" appears on the display, there is apparently a failure in the recorder. If the message "PASS" appears, the nuclei in this mode have been executed successfully. There can be still a failure in the recorder because the nuclei in this mode don't cover the complete functionality of the recorder.

5.1.2 Contents

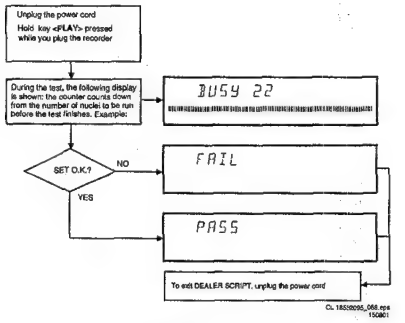

Figure 5-1

The End use/Dealer script executes all diagnostic nuclei that do not need any user interaction and are meaningful on a standalone DVD recorder. The nuclei called in the End user/ Dealer script are the following:

Counter	Nucleus	Name	Description
22	104	HostdSdramWrR	checks all memory locations of the 4MB SDRAM
21	106	HostdDramWrR	checks all the DRAM connected to the microprocessor of the digital board
20	123	HostdI2cNvram	checks the data line (SDA) and the clock line (SCL) of the I2C bus between the host decoder and NVRAM
19	202	SAA7118I2c	checks the interface between the Host I2C controller and the AVENC SAA7118 Video Input Processor
18	200	VideoEncI2c	checks the interface between the host I2C controller and Empress SAA6752
17	207	AudioEncI2c	checks the I2C connection between the host decoder and Empress SAA6752
16	204	AudioEncAccess	tests the HIO8 interface lines between the host decoder and the audio encoder
15	203	AudioEncSramAccess	checks the access of the SRAM by the audio encoder (address and data lines).
14	205	AudioEncSramWrR	tests the SRAM connected to the audio encoder
13	206	AudioEncInterrupt	tests the interrupt line between the host decoder and the audio encoder
12	300	VsmAccess	checks whether the VSM interrupt controllers and DRAM are accessible
11	303	VsmInterrupt	checks both interrupt lines between the VSM and the host decoder
10	302	VsmSdramWrR	tests the entire SDRAM of the VSM
9	1400	Clock11_289MHz	switches the A_CLK of the micro clock to 11.2896 MHz
8	1401	Clock12_288MHz	switches the A_CLK of the micro clock to 12.288 MHz
7	601	BeS2Bengine	checks the S2B interface with the Basic Engine by sending an echo command
6	500	DisplayEcho	checks the interface between the host processor and the slave processor on the display board
5	700	AnalogueEcho	checks the interface between the host processor and the microprocessor on the analogue board
4	711	AnalogueNvram	checks the NVRAM on the analogue board
3	706	AnalogueTuner	checks whether the tuner on the analogue board is accessible
2	901	LoopAudioUserDealer	This nucleus tests the components on the audio signal path The host decoder - The analogue board - The audio encoder - The VSM On the analogue board the audio is internally looped back to the digital board
1	906	LoopVideoUserDealer	Nucleus for testing the components on the video signal system path: - The VIP - The video encoder - The VSM - The host decoder - The analogue board On the analogue the video signal is internally routed back to the digital board.

5.2 Player Script Interface

5.2.1 Description

The Player script will give the opportunity to perform a test that will determine which of the DVD recorder's modules are faulty, to read the error log and to perform an endurance loop test. To successfully perform the tests, the DVD recorder must be connected to a TV set.
To be able to check results of certain nuclei, the player script expects some interaction of the user (i.e. to approve a test picture or a test sound). Some nuclei (e.g. nuclei that test functionality of the DVDR module) require that a DVD+RW disc is inserted.
Only tests within the scope of the diagnostic software will be executed hence only faults within this scope can be detected.

5.2.2 Structure of the Player Script

The player script consists of a set of nuclei testing the hardware modules in the DVD recorder: the Display PWB, the Digital PWB, the Analogue In/Out PWB and the DVDR module.
Nuclei run by the player test need some user interaction; in the next table this interaction is described. The player test is done in two phases:

- Interactive tests: this part of the player test depends strongly on user interaction and input to determine nucleus results and to progress through the full test. Reading the error log information can be useful to determine any errors that occurred recently during normal operation of the DVD player.
- The loop test will perform the same nuclei as the dealer test, but it will loop through the list of nuclei indefinitely.

STEP	DESCRIPTION	NUCLEUS
1	Press **OPEN/CLOSE** and **PLAY** at the same time and POWER ON the recorder to start the playerscript	2
2	The local display shows **FPSEGMENTS**. Press **PLAY** to start the test. First the *starburst pattern* is lit, then the *horizontal segments* are lit, followed by the *vertical segments* and the last test is *light all segments* test. After each of the 4 tests the user has to confirm that the correct pattern was lit. Press **PLAY** to confirm that the correct pattern was lit (four times if the FPSEGMENTS test was successful). Press **RECORD** to indicate that the correct pattern was not successfully lit. Press **STOP** to skip this nucleus.	502
3	The local display shows **FPLABELS**. Press **PLAY** to start the test. Press **PLAY** to confirm that all labels are lit. Press **RECORD** to indicate that not all labels are lit. Press **STOP** to skip this nucleus.	503
4	The local display shows **FPLIGHT ALL**. Press **PLAY** to start the test. Press **PLAY** to confirm that everything was lit. Press **RECORD** to indicate that not all patterns are lit. Press **STOP** to skip this nucleus.	520
5	The local display shows **FPLED**. Press **PLAY** to start the test. Press **PLAY** to confirm that the led is lit. Press **RECORD** to indicate that the led is not lit. Press **STOP** to skip this nucleus.	504
6	The local display shows **FPFLAP OPEN**. Press **PLAY** to start the test. Press **PLAY** to confirm that the flap has opened. Press **RECORD** to indicate that the flap did not open. Press **STOP** to skip this nucleus.	522
7	The local display shows **FPKEYBOARD**. Press **PLAY** to start the test. Attention all keys have to be pressed to get a positive result! Press **PLAY** for more than one second to confirm that all the keys were pressed and shown on the local display. If not all the keys were pressed, a FAIL message will appear on the local display. Press **RECORD** for more than one second to indicate that not all keys were pressed and shown on the local display. Press **STOP** for more than one second to skip this nucleus.	505
8	The local display shows **FPREMOTE CONTROL**. Press **PLAY** to start the test. Press **PLAY** to confirm that a key on the remote control was pressed and shown on the local display. Only one key has to be pressed to get a successful result. Press **RECORD** to indicate that the key on the remote control was pressed but not shown on the local display. Press **STOP** to skip this nucleus.	506
9	The local display shows **FPDIMMER**. Press **PLAY** to start the test. Press **PLAY** to confirm that the text on the local display was dimmed. Press **RECORD** to indicate that the text on the local display was not dimmed. Press **STOP** to skip this nucleus.	518
10	The local display shows **FPBEEPER**. Press **PLAY** to start the test. Press **PLAY** to confirm that the beeper on the front panel sounded. Press **RECORD** to indicate that the beeper on the front panel did not sound. Press **STOP** to skip this nucleus.	514
11	The local display shows **FPFLAP CLOSE**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	523
12	The local display shows **ROUTE VIDEO**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	712
13	The local display shows **ROUTE AUDIO**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	713
14	The local display shows **COLOUR-BAR ON**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	120

STEP	DESCRIPTION	NUCLEUS
15	The local display shows **PINK NOISE ON**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	115
16	The local display shows **PINK NOISE OFF**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	116
17	The local display shows **SINE ON**. Press **PLAY** to start the test. Press **STOP** to stop the sine. Press **STOP** to skip this nucleus.	117
18	The local display shows **COLOUR-BAR OFF**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	121
19	The local display shows **BERESET**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	603
20	The local display shows **BETRAY OPEN**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	616
21	The local display shows **BETRAY CLOSE**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	615
22	The local display shows **BEWRITE READ**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	617
23	The local display shows **BETRAY OPEN**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	616
24	The local display shows **BETRAY CLOSE**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus.	615
25	The local display shows **READ ERRORLOG**. Press **PLAY** to start the test. Press **STOP** to skip this nucleus. If the player test succeeded, the user/dealer script will start in an endless loop. If the player test failed, the local display will display FAIL and the error code	633

Remark
In case of failure, the display shows " FAIL XXXXXX ". The description of the shown error code can be retrieved in the survey of Nuclei Error Codes (paragraph 5.4). Once an error occurs, it is not possible to continue the player script. Unplug the set and restart the player script. By pressing the STOP key, it is possible to jump over the failure and to continue the player script.

5.2.3 Error Log

Explanation:
The application errors will be logged in the NVRAM. The maximum number of error bytes that will be visible is 19. The last reported error is shown as DN D0000000, the oldest visible error as D0000000 UP and the errors in between as DN D0000000 UP. DN stands for DOWN, UP stands for UPWARDS. The shown
D error codes are identical to the Nuclei Error Codes (paragraph 5.4).

5.2.4 Trade Mode

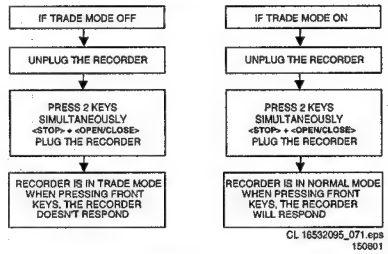

Figure 5-4

5.2.5 Virgin mode

If you want that the recorder starts up in Virgin mode, follow this procedure:
- Unplug the recorder
- plug the recorder again while you keep the STAND BY/ON key pressed
- the set starts up in Virgin mode.

5.3 Menu and Command Mode Interface

5.3.1 Nuclei Numeration

Each nucleus has a unique number of four digits. This number is the input of the command mode.

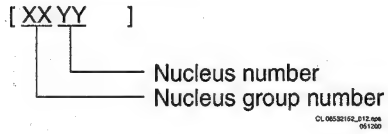

Figure 5-5

The following groups are defined:

Group number	Group name
0	Basic / Scripts
1	Host decoder (Sti5505 and memory)
2	Audio / video encoder (DVDR only)
3	VSM (DVDR only)
4	NVRAM
5	Front Panel
6	Basic Engine
7	Analogue board (DVDR only)
8	DVIO (DVDR only)
9	Loop nuclei (DVDR only)
10	Library sub nuclei (I2C nuclei)
11	User interface
12	Furore (SACD only)
13	DAC (SACD only)
14	Miscellaneous

5.3.2 Error Handling

Each nucleus returns an error code. This code contains six numerals, which means:

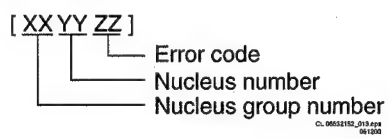

Figure 5-6

The nucleus group numbers and nucleus numbers are the same as above.

5.3.3 Command Mode Interface

Set-Up Physical Interface Components
Hardware required:
- Service PC
- one free COM port on the Service PC
- special cable to connect DVD recorder to Service PC

The service PC must have a terminal emulation program (e.g. OS2 WarpTerminal or Procomm) installed and must have a free COM port (e.g. COM1). Activate the terminal emulation program and check that the port settings for the free COM port are: 19200 bps, 8 data bits, no parity, 1 stop bit and no flow control. The free COM port must be connected via a special cable to the RS232 port of the DVD recorder. This special cable will also connect the test pin, which is available on the connector, to ground (i.e. activate test pin).
Code number of PC interface cable: 3122 785 90017

Activation
Plug the recorder to the mains and the following text will appear on the screen of the terminal (program):

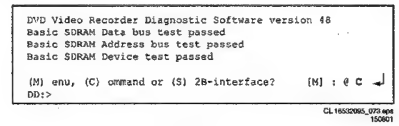

Figure 5-7

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose between the three possible interface forms. If pressing C has made a choice for Command Interface, the prompt ("DD>") will appear. The diagnostic software is now ready to receive commands. The commands that can be given are the numbers of the nuclei.

Command Overview
We provide an overview of the nuclei and their numbers. This overview is preliminary and subject to modifications.

Routing Audio and Video

Route Video
Nucleus Number: 712
Description
This nucleus routes the video signals on the analogue board to the destination determined by the input parameters

The paths that are available for video routing and their description(Europe version):

Path ID	Description
00	Input signal is VIDEO(CVBS) from digital board and will be re-routed back to the digital board.
01	Input signal is from FRONT VIDEO(CVBS) IN and will be routed to the digital board.
02	No Routing.
03	Input signal is from FRONT S-VIDEO(Y/C) and will be routed to the digital board.
04	No Routing.
05	Input signal is CVBS from SCART1 and will be routed to the digital board.
06	Input signal is CVBS from SCART2 and will be routed to the digital board.
07	Input Signal is CVBS from Digital Board and it will be routed to Scart1 and Scart2.
08	Input signal is VIDEO(CVBS) from ANTENNA IN and will be routed to SCART2.
09	Input signal is VIDEO(CVBS) from SCART1 and will be routed to SCART2.
10	Input signal is VIDEO(CVBS) from SCART2 and will be routed to SCART1.
11	Signal path is routed Fast Blank from Scart2 pin16 and will be routed Scart1 pin16
12	Input Signal is YC from Digital Board and it will be routed to Scart1.
13	No Routing.
14	No Routing.
15	Input Signal is CVBS from TUNER and it will be routed to Digital .
16	No Routing.
17	Input Signal is routed from digital board YC to REAR S-VIDEO(YC) OUT
18	Signal path is routed from digital board RGB to RGB SCART1 and from digital board CVBS to digital board CVBS.
19	No Routing.
20	Input RGB Signal is routed from Digital Board to SCART1(RGB),Input CVBS Signal from Digital Board to Digital Board and Fast Blanking Signal from Scart 2 to Scart1.
21	Input Y/C Signal from Digital Board is routed to Rear Y/C Connector and Input Y/c Signal from Front Y/C connector is routed to Digital Board.

The paths that are available for video routing and their description (Nafta region):

PATH ID	DESCRIPTION
00	Input signal is VIDEO(CVBS) from digital board and will be re-routed back to the digital board.A Cinch Cable need to be connected from Rear Cinch Out to Front Cinch In for this Test.(Direct routing on analogue board from YUV In to YUV Out is not Possible)
01	Input signal is from FRONT VIDEO(CVBS) IN and will be routed to the digital board.This routing is same as the above path id.
02	Input signal is from REAR VIDEO(CVBS) IN and will be routed to the digital board.
03	Input signal is from FRONT S-VIDEO(Y/C) IN and the signal received will be routed to the digital board.
04	Input signal is from REAR S-VIDEO(Y/C) IN and will be routed to the digital board.
05	No Routing.
06	No Routing.
07	No Routing.
08	Input signal is VIDEO(CVBS) from TUNER and will be routed to Y Pin of Rear Y/C Connector.This will give only black/White Picture .
09	Input signal is from YUV IN and will be routed to YUV OUT.This is possible only if Digital Board routes back YUV signal received back to the Analogue board(DENC)
10	No Routing.
11	No Routing.
12	No Routing.
13	No Routing.
14	No Routing
15	Input CVBS Signal from Tuner is routed to Digital Board..
16	No Routing
17	Input RGB Signal is routed from Digital Board to RGB Rear Out and Input CVBS Signal is routed from Rear Cinch In 1 to Digital Board(This second step is for routing Input CVBS Signal from Digital Board to Digital Board again - A Cinch cable need to be connected from Rear Cinch Out1 to Rear Cinch In 1)
18	Input Signal from CVBS Rear In is routed to Digital Board.This is same as path id 02.
19	Input Y/C signal from Digital Board is routed to Y/C Rear Out Connector and Input signal from Y/C Rear In Connector is routed to Y/C Digital Board.

23	The Video signal received from the Digital board will be outputted on Modulator channel 3. Please use command 120 for testing Video because Nuclei 120 will generate the Colour Bar signal on the digital Board.
24	The Audio signal received from the Digital board will be outputted on Modulator channel 4. Please use command 120 for testing Video because Nuclei 120 will generate the Colour Bar signal on the digital Board.

Example
DD:> 712 01
71200: Video routing on the Analogue Board OK.
Test OK @

Description
This nucleus routes the audio on the analogue board to the destination determined by the input parameters
The paths that are available for audio routing and their description (Europe version)

Route Audio
Nucleus Number: 713

PATH ID	DESCRIPTION
00	No Routing.
01	Input signal is from FRONT AUDIO IN and will be routed to the digital board.
02	Input signal is from REAR AUDIO IN 2 and will be routed to the digital board.
03	Input Audio Signal is routed from FRONT Cinch In to Digital Board.(This is same as path id 01)
04	Input Signal is from Rear Cinch In1 and it will be routed to Digital Board..
05	No routing.
06	No routing.
07	No routing.
08	No Routing.
09	No routing.
10	No Routing.
11	No Routing.
12	No Routing.
13	Input Signal is from Digital Board and it will be routed to the digital board.
14	No routing.
15	Input is Audio Signal from TUNER and it will be routed to Digital Board.
16	Input signal is AUDIO from dvio board and will be routed to Digital Board.
17	No routing.
18	No routing.
19	No routing.
20	Input signal is from REAR AUDIO IN 2 and will be routed to the digital board.
21	Input signal is from REAR AUDIO IN 1 and will be routed to the digital board.
22	Input signal is from REAR AUDIO IN 1 and will be routed to the digital board.
23	The Audio signal received from the Digital board will be outputted on Modulator channel 3. Please use command 117 for testing audio because Nuclei 117 will generate the Audio signal on the digital Board.
24	The Audio signal received from the Digital board will be outputted on Modulator channel 4. Please use command 117 for testing audio because Nuclei 117 will generate the Audio signal on the digital Board.

EXAMPLE
DD:> 713 00
71300: Audio routing on the Analogue Board OK.
Test OK @

5.3.4 Menu Mode Interdace

Activation

Plug the recorder to the mains and the following text will appear on the screen of the terminal (program):

```
DVD Video Recorer Diagnostic Software version 48
Basic SDRAM Data bus test passed
Basic SDRAM Address bus test passed
Basic SDRAM Device test passed

(M) enu, (C) ommand or (S) 2B-interface?     [M] : a M ↵

Main Menu

1.   Digital Board            ->
2.   Analogue Board           ->
3.   Front Panel              ->
4.   Basic Engine             ->
5.   DVIO                     ->
6.   Progressive Scan Board   ->
7.   Loop tests               ->
8.   Log                      ->
9.   Scripts                  ->

Select>
```

Figure 5-8

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose between the three possible interface forms. If pressing M has made a choice for Menu Interface, the Main Menu will appear.

Menu Structure

The following menu structure is given after starting up the DVD recorder in menu mode. The symbol -> indicates that the current menu choice will invoke the display of a submenu.

0xF5	LINK chip not responding	-	Phy

5.5 Loop tests

The following loops can be distinguished:

- Loops performed on the digital board only
- User Dealer loops performed on the digital and analogue board
- System loops performed via an external connection: outputs are looped back to the inputs.

5.5.1 Nucleus 900: Digital Audio Loop

This nucleus tests the audio path through the digital board

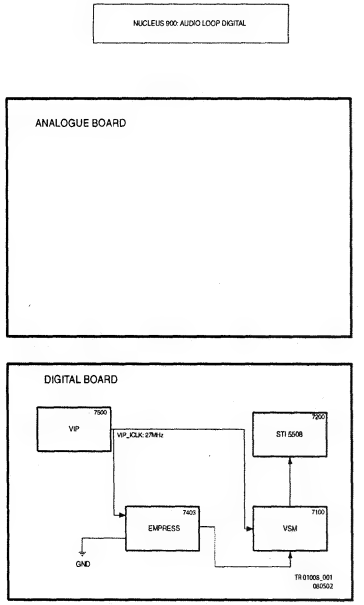

Figure 5-9

5.5.2 Nucleus 901: Audio User Dealer Loop

This Nucleus is only possible in NAFTA sets.
A PCM audio sine of 12kHz is generated in the Host Decoder for a while and sent to the analogue board. The signal coming from the analogue board is encoded again and sent to the memory of the host decoder for comparison. This nucleus tests the components on the audio signal path:

- Host decoder
- Flex connection between connector 1602 (digital board) and connector 1900 (analogue board)
- DAC
- Op-amp
- Scart switch IC
- ADC
- Audio Encoder
- VIP
- VSM

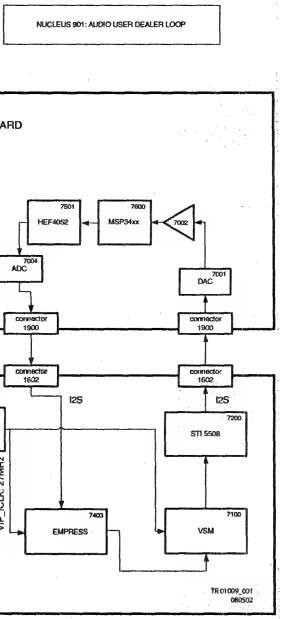

Figure 5-10

5.5.3 Nucleus 902: Digital Video Loop

A colourbar generated in the host decoder is looped through the VIP, Empire, and VSM and checked again in the host decoder. The following components are tested on the video signal path:

- VIP
- Empire
- VSM
- Host decoder

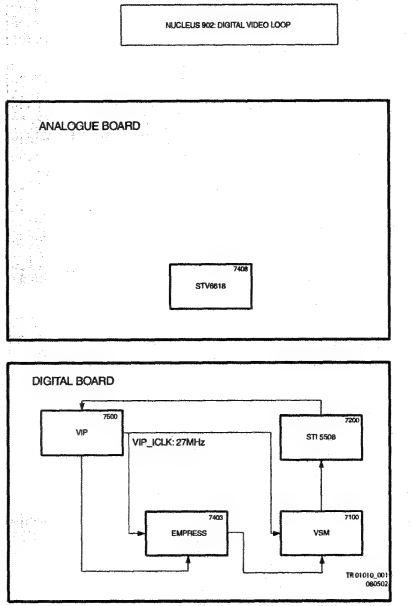

Figure 5-11

5.5.4 Nucleus 903: Digital Video VBI Loop

Nucleus for testing the components on the video VBI signal path:

- The VIP
- The VSM
- The Host Decoder

This is done by using the internal test signal source (digital board only)
Remark: this test is only successful if nucleus 121 is carried out first.

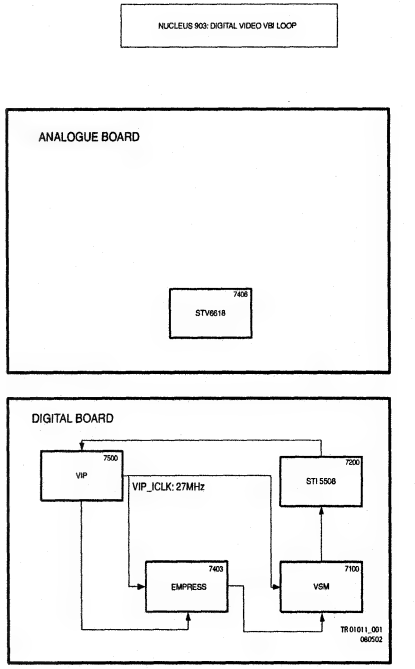

Figure 5-12

5.5.5 Nucleus 904: System Video Loop

Nucleus for testing the components on the video signal system path:

- The VIP
- The video encoder
- The VSM
- The host decoder
- The analogue board

On the analogue board the video signal will be routed to the SCART (EUROPE) or CINCH (NAFTA). There it will be looped back externally by means of the proper cable

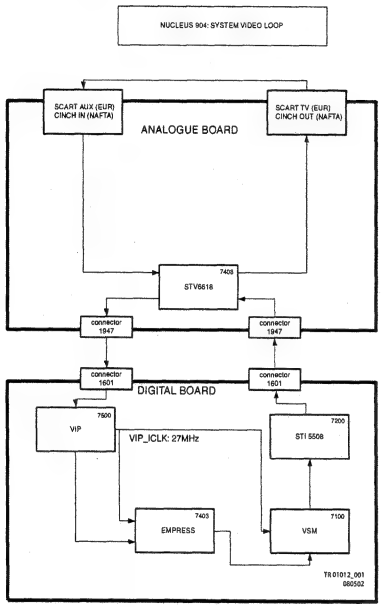

Figure 5-13

5.5.6 Nucleus 905: System Video VBI Loop

This nucleus tests the components on the video signal path:

- The VIP
- The VSM
- The Host Decoder

The video CVBS signal is routed to the output of the analogue board where it will be looped back by means of an external cable

Remark: this test is only successful if nucleus 121 is carried out first.

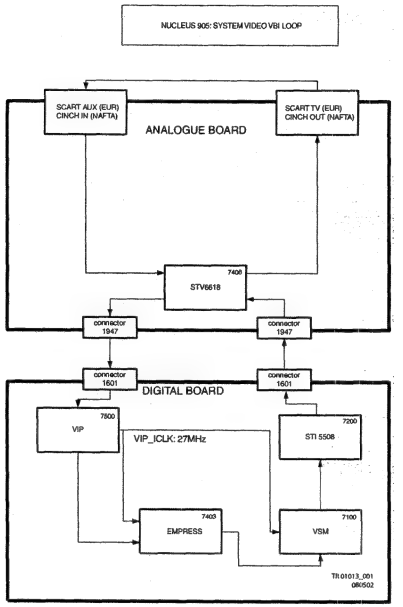

Figure 5-14

5.5.7 Nucleus 906: Video User Dealer Loop

Nucleus for testing the components on the video signal system path:

- The VIP
- The video encoder
- The VSM
- The host decoder
- The analogue board

On the analogue board, the video signal is internally routed back to the digital board.

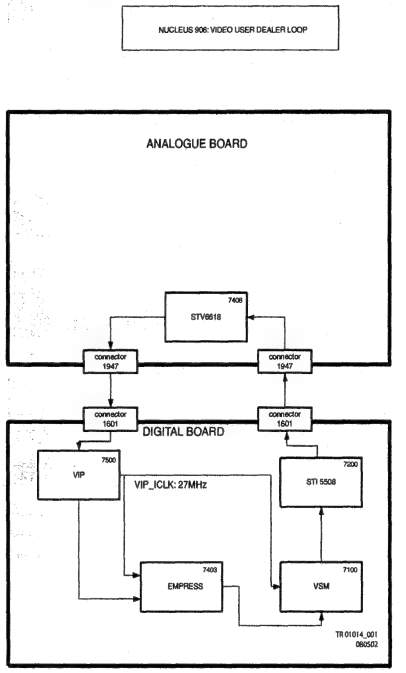

Figure 5-15

5.5.8 Nucleus 907: Video VBI User Dealer Loop

This nucleus tests the components on the video VBI signal path:

- The VIP
- The VSM
- The Host Decoder

The signal is routed back internally on the analogue board

Remark: this test is only successful if nucleus 121 is carried out first.

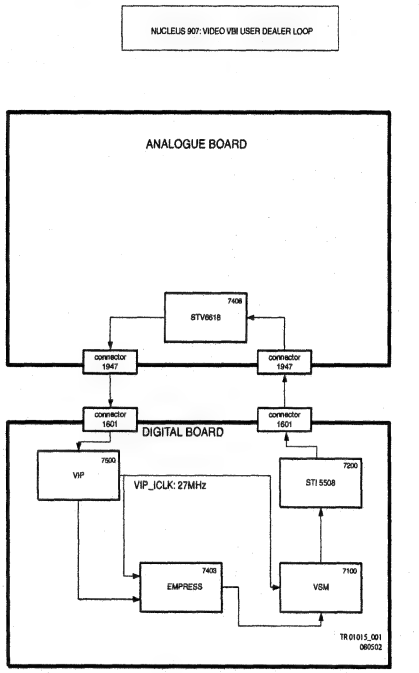

Figure 5-16

5.5.9 Nucleus 908: System Audio Loop Scart (Europe)

Nucleus for testing the components on the audio signal path:
- The hostdecoder
- The analogue board
- The audio encoder
- The VSM

On the analogue board, audio is passed to the SCART connector, where a SCART cable needs to be used to loop back the audio signal to the digital board

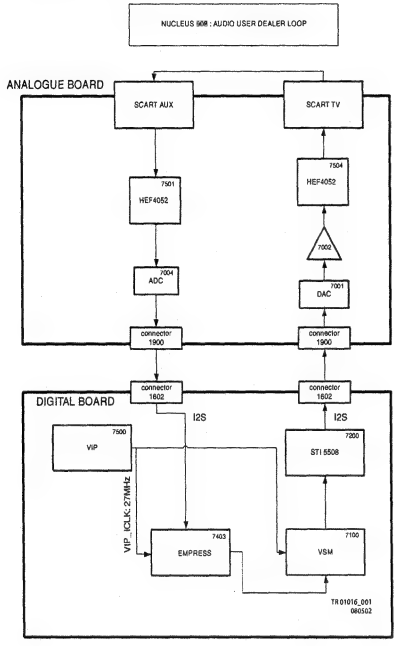

Figure 5-17

5.5.10 Nucleus 909: System Audio Loop CINCH (Nafta)

Nucleus for testing the components on the audio signal path:
- The hostdecoder
- The analogue board
- The audio encoder
- The VSM

A parameter has to be specified to select the appropriate output routing. This parameter is identical to nucleus 713.

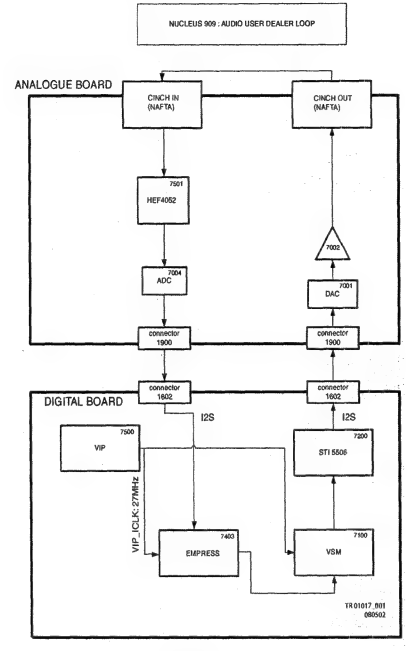

Figure 5-18

5.5.11 Nucleus 910: DVIO Video Input

Nucleus for testing the components on the video signal path:
- The DVIO board
- The VIP
- The video encoder
- The VSM
- The host decoder

Note :This Test is not valid for Nafta in DVDR-Lead. For Europe the sound will be available on scart 2.

5.5.12 Nucleus 911: DVIO Video VIP

Nucleus for testing the components on the video signal system path:
- The host decoder
- The analogue board
- The VIP

On the analogue board the video signal will be routed according to the parameter. There it will be looped back externally by means of the proper cable.

The correct Routing path has to be selected by a parameter:

Analog board Version	Selectable parameter	Internal call to nucleus 712
01	1	712.21
11	1	712.21
31	2	712.17
31	3	721.18
31	3	712.19
41	2	712.17
41	3	712.18
41	4	712.19
41	5	712.20
71	4	712.19

Remark: Nucleus 704 gives the analog board version

Personal Notes:

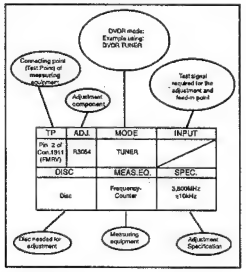
8. Alignments

8.1 Alignment Instructions Analogue Board

Test equipment:

1. Dual-trace oscilloscope
   Voltage range : 0.001 – 50 V/div
   Frequency : DC – 50 MHz
   Probe : 10:1, 1:1
2. DVM (Digital voltmeter)
3. Frequency counter
4. Sinus generator
   Sinus : 0 – 50 MHz
5. Test pattern generator

How to read the adjustment procedures:



Front End (FV)

Service tasks after replacement of IC 7710, coil L5710 and L5711:

1 AFC Adjustment:

Purpose: Correct adjustment of demodulator AFC - circuit

Symptom, if incorrectly set:
Bad or disturbed TV channel reception.

PAL - AFC adjustment [5711]:

TP	ADJ.	MODE	INPUT
IC 7710 Pin 17 (F709)	L5711	TUNER	38,9MHz 500mV$_{pp}$ at Tuner 1705, Pin 11 (F710, IF-out)
DISC		MEAS.EQ.	SPEC.
		DC Voltmeter Freqs. Generator	2,5V ±0,1V

Storage in NVRAM via command mode interface of DSW:
After adjustment, the AFC reference value has to be stored in the NVRAM.
This reference value is 256 * measured voltage/Ucc. Ucc is 5.0V.
Store the reference value via command 732 , followed by the ref. value.
Example: DD:> 732 128

2 HF - AGC adjustment [3724]:

Service tasks after replacement of IC 7710:

Purpose: Set amplifier control.

Symptom, if incorrectly set:
Picture jitter if input level is too low and picture distortion if input level is too high.

TP	ADJ.	MODE	INPUT
Tuner 1705 Pin 11 (F710, IF-out)	R3707	Set tuned to channel 25 503.25 MHz	5mV(74dBµV) on aerial input PAL white picture, audio IF on, no modulation
DISC		MEAS.EQ.	SPEC.
		Oscilloscope Video Pattern Generator	500mV$_{pp}$ +/-0.5dB (use a 10:1 probe)

3 Attenuating the 40.4 MHz [5710]: (SECAM only)

Service tasks after replacement of coil 5710:

Purpose: To attenuate the band I carrier rests.

Symptom, if incorrectly set:
Bad picture quality when the filter attenuates the picture carrier (38.9MHz).

TP	ADJ.	MODE	INPUT
OFW 1701 Pin 1 (F709)	L5710	TUNER	40.4 MHz, 200mV$_{pp}$ at Tuner 1705, Pin 11 (F710, IF-out)
DISC		MEAS.EQ.	SPEC.
		Oscilloscope, Sinus Generator, Counter	adjust minimum amplitude

If the adjustment is correct the signal at pin 1 of OFW [1701] must be smaller than the input signal amplitude by at least 6 dB.

Figure 8-1

8.2 Reprogramming Procedure of NVM on the Microprocessor Sub PCB

The NVM, item 7808, on the Microprocessor Sub board contains the following factory settings:
1. Clock correction factor
2. AFC reference value
3. Slash version

The settings 1,2 and 3 are stored in the NVM during the production of the analogue board.
The slash version is stored at the end of the production line of the set.
In case of failure, the NVM must be replaced by an empty device. By way of commands via the Diagnostic Software or via ComPair, the factory settings must be restored in the NVM.

8.2.1 Clock Correction Adjustment

To guarantee an exact function of the real time clock, an adjustment of the clock frequency is possibe. The adjustment value is stored in the NVM.
Procedure:
- put the set in service command mode
- execute command 722 to initiate that a signal with 32768 Hz is available on pin 3 of connector 1988
  DD:>722
- measure the frequency f_{meas} of the Clock Crystal with an accuracy of ± 0.1 Hz.
- Calculate the parameter to be entered: $32768/f_{meas} * 10^6$
- Normally the parameter must be between 999902 and 1000097. If the parameter and therefore the frequency of the crystal is outside this range, the crystal must be replaced.
- Execute command 721 with the parameter as input
  example:
  DD:>721 1000023

8.2.2 AFC Reference Voltage Tuner

This function stores the reference voltage for the tuner in the NVM. Before this value can be stored, the AFC adjustment, described in the adjustment instructions of the analogue board, must be carried out.
Procedure:
- Adjust AFC circuit
- Calculate the reference value
- Execute command 732 and use the calculated reference value as parameter
  example:
  DD:>732 128

8.2.3 Slash Version

The slash version is stored with command 715 followed by the slash version as parameter.
The slash versions used in DVDR880 and DVDR890 are the following:
- DVDR880/00X: 63
- DVDR880/02X: 63
- DVDR880/05X: 64
- DVDR890/00X: 61
- DVDR890/02X: 61
- DVDR890/05X: 62
- DVDR890/69X: 81
- DVDR890/17X: 51

Example:
DD:>715 63

Reset of Slash Version
Use command 729 to reset the analogue board to the default setting.
Procedure:
- Put the set in DSW command mode
- Execute command 729 with the following parameters:
  DD:> 729 w 0xA0 3 0x07 0xD0 0x00
- Leave the DSW command mode and start up the set in application mode
  No background is visible on the TV screen. The analogue board is ready to accept the appropriate slash version

8.3 Rework Procedure IEEE Unique Number

8.3.1 Scope:

The procedure describes how to upgrade sets with a unique number after repair. This unique number is stored in the NVRAM (item 7201) of the digital board at the end of the production line.
This procedure is only valid or necessary when:
- The digital board is replaced
- NVRAM on the digital board is replaced
- NVRAM is cleared

In all other cases the repaired set retains its unique number.
The procedure defines several means to re-assure the unique number depending on the possibilities of repair or the state the faulty set is in.

8.3.2 Handling:

State of original (defective) board:
1. The digital board starts up in Diagnostics Mode: follow procedure A to retrieve the valid unique number
2. The digital board does NOT start up in Diagnostics Mode: follow procedure B.

8.3.3 Procedure A

1. Connect defective digital board to PC via serial cable (3122 785 90017)
2. start up hyper terminal or any other serial terminal via the correct settings (DSW command mode interface)
3. read out existing unique number via nucleus 403
   example:
   DD:> 403
   40300: DV Unique ID = 00D7A1FC8C
   Test OK ☻
4. note read out
5. program new digital board via nucleus 410
   example: DD:> 410 00D7A1FC8C
   41000:
   Test OK ☻

The set has now the original unique number

8.3.4 Procedure B

1. Note the serial number of the set
   example:
   VN050136130156
   - VN = production centre (VN....Szekesfehervar). According to UAW-500: V=22 and N=14
   - 05 = change code (this is not used for this calculation)
   - 01 = YEAR
   - 36 = Production WEEK
   - 130156 = Lot and SERIAL number
2. Calculate the unique number: this number always exists out of 10 hexadecimal numbers.
3. First 5 numbers:
   First we calculate a decimal number according to the formula below:
   35828*YEAR* **+ 676*** *WEEK* **+ 26*V + N + 8788**
   The figures are fixed, *YEAR + WEEK + factory code (V + N) are variable*
   Example:
   35828*01***+676***36***+26***22***+14+8788** = 69538 (decimal)
   Then we translate the decimal number to a hexadecimal number.
   example:
   69538 (decimal) = 10FA2 (hex)
4. Last 5 numbers:
   The last 5 numbers exist out of the Lot and SERIAL number.
   We have to translate the decimal number to the next 5 hexadecimal numbers:
   Example:
   130156 (decimal) = 1FC6C (hex)
5. Program new digital board via nucleus 410
   Therefore we use the 10 hexadecimal numbers we calculated above:
   example:
   DD:> 410 10D7A1FC6C
   41000:
   Test OK ☻

The set has now its original unique number

9. Circuit-, IC Descriptions and List of Abbreviations

9.1 Display Board

9.1.1 Microcontroller

The core element of the Display Control unit is the microcontroller TMP87CH74AF [7110]. The TMP87CH74AF is an 8 bit microcontroller fitted with 32kB ROM and 1kB RAM. It requires 5V supply and is responsible for the following functions:
- Interface to Central Controller-µP
- Evaluation of the keyboard matrix
- Decoding the remote control commands from the Infra-red receiver
- Activation and control of the local display
- Heater voltage generation

The 8 MHz resonator (Pos. 1111) generates the system clock.
The reset is generated by the CC-µP via "POR_DC"-signal where the transistor [7106] is used as a level-shifter from 3V3 to 5V.

9.1.2 Interface to the Central Control µP

The communication to the main microcontroller (CC) on the µP-Sub-PCB is done via I^2C-Interface, where the TMP87CH74AF acts in slave-mode.
An additional wire ("INT"-line) is used to signal the Central controller that data are ready, e.g. when a key has been pressed.

9.1.3 Evaluation of the Keyboard Matrix

There are 10 different keys on the display board. A resistor network is used to generate a specific direct voltage value, depending on the pressed key. Via the resistors 3168 and 3169 on the analog/digital (A/D) ports (7110 pin 37 and 38) the evaluation is done.

9.1.4 IR Receiver and Signal Evaluation

The IR receiver [7150] contains a selectively controlled amplifier as well as a photo-diode. The photo-diode changes the received infra red transmission (approx. 940nm) to electrical pulses, which are then amplified and demodulated. On the output of the IR receiver [7150], a pulse sequence with TTL-level, which corresponds to the envelope curve of the received IR remote control command, can be measured. This pulse sequence is fed into the controller for further processing via port TC1 [7110, pin20].

9.1.5 Vacuum Fluorescence Display

The VFD "10-BT-242GNK" [POS 7100] is fully controlled by the microcontroller. The µC also includes the driving stages. Only two additional drivers [POS 7101 and 7102] are necessary for the grids 8 and 10 because of their large size.

9.1.6 VFD Heater Voltage Generator

The circuit around POS [7103, 7104 and 7105] is used to generate a proper AC-Voltage for the filament of the VFD. For this the microcontroller generates an appropriate rectangular signal with 50% duty-cycle and a frequency of 30 kHz at pin 19. Pos. [5193] and [2102] are acting as a resonance-circuit. Via Zener-Diode (POS[6100]) and resistors [3100, 3103 and 3104] the two heater-pins of the VFD ("FIL1" and "FIL2") are clamped so that the grids and segments can be fully switched off.

9.1.7 REC-LED

The REC-LED is a red LED, located on a small PCB together with the REC-Switch and controlled via pin 3 of the microcontroller. The POS [7180] is used as a driver for the led.

9.2 Microcontroller Sub Board (UPC12 SUB PCB)

9.2.1 General

This small PCB is directly soldered in on top of the Analogue-Board.
It is used with no diversity in all three different basic versions (Europe, NAFTA and APAC-Pal). Only the software being loaded into the external Flash-memory is not the same.

9.2.2 Microcontroller

The main part of the Sub-PCB is the central controller (CC) µP [7804] TMP91CW12AF, which is a 16-bit CPU with 128kBROM and 4kB RAM.
It works with a 3V3 supply and a system clock of 24,576MHz [1801].
The 3V3-supply is made out of the "5VSTBY" by the circuit around [7816].
After connecting the set to the mains (power-up) the IC [7806] generates a reset pulse. This signal ("IPOR") is directly fed to first priority interrupt input (pin 63) for power fail detection and also to the Reset-Input of the CC (Pin30) via [7802], which is necessary to generate a reset only during power-up. In case of power fail pin 30 of the CC must be kept high (3V3).
The internal memory of the CC is too small for all necessary demands. Therefore an external Flash-ROM [7805] with 1MByte in size and a RAM [7803] with 128kByte are necessary. Both parts are connected to the µP via a parallel address-/data-bus. The lower eight bus-lines (AD0 to AD7) are multiplexed by [7801] and the "ALE"-signal of the CC.
For updating of the software the external Flash-ROM can be reprogrammed by the µP. During this process [7807] is switched on by the "WE"-signal.
When no mains is connected, the CC is supplied via Gold-Cap [2816] during the power backup period. The diode [6802] prevents unwanted current consumption of other components.
The internal ROM of the µP holds the program code for the Real-Time-Clock. Only the microprocessor is supplied by the backup cell, not the external memories and the µP operates in a low frequency mode with the clock crystal [1805] only (32.768 kHz). To adjust the clock the frequency can be measured at pin 87 of the µP in a special test-mode.

9.2.3 Control-Interfaces

The CC is communicating with the digital board via a serial connection, which operates at a speed of 19,4 kbit/s ("D_DATA"-, "A_DATA", "D_RDY"- and "A_RDY"-signal on [1986]). By generating a high level on pin 16 of the CC the digital PCB can be reset (inverter [7817] in between).
Most of the other parts are controlled by the µP via I^2C-bus ("SDA"- and "SCL"-signal). The FETs [7821] and [7822] are used for adaptation of the 3V3-level on CC-side to the components supplied with 5V.
The CC can also reset the display-board-µP by pulling pin 39 to high.
The transistor [7819] acts as a level shifter for the "INT"-signal.
In the European sets a bi-directional interface is established between the recording unit and the TV device at pin 10 of the Scart ("P50"-line/Easy Link). The processing is done via pin 14 (output) and pin 38 (input) of the CC and the circuit around [7813], [7814] and [7815].

9.2.4 EEPROM

The EEPROM M24C16 [7808] is an electrical erasable and programmable, non-volatile memory. The EEPROM stores data specific to the device, such as the AFC-reference value of the Europe IF-part, the clock-correction-factor, etc. It is accessed by the µP via the I²C-bus.

9.2.5 Sync Separator

TTo detect whether a video signal is available or not a separate IC [7825] is used to extract the sync information out of the video signal that is also routed to the digital board for recording.
While on the input a low-pass-filter ([2823] and [3869]) limits the bandwidth an additional filter (circuit around [7818]) on the output avoids distortions. Afterwards the sync-signal is routed to pin11 of the CC.

9.2.6 Fan Control

To avoid unwanted temperatures inside the set (especially the Laser on the OPU of the drive is very sensitive) a fan is located on top of the basic engine. The speed control is dependent on the ambient temp. A NTC resistor [3172] located on the display board measures the temperature. An operational amplifier [7902-B] generates a proper voltage, which is then fed to the engine ("BE_FAN"-line). Below 28°C ambient temp. the fan-voltage is approx. 5V and is increased to 10V when the ambient temperature goes up to approx. 35°C. The second part of the Op-Amp. [7902-A] prevents damage of any temperature-sensitive part in case the NTC or the wire in between is damaged. It acts as a comparator and pulls the "BE_FAN"-signal to 10V. As the fan has to be stopped in case the tray of the drive is open this voltage is "killed" by the CC ("FAN_OFF"-signal). The double-diode [6903] acts for both Op.-Amp.-circuits.

9.2.7 Power Supply

The 5SW and 8SW supply are switched off in case of standby from the P via the ISTBY-line. This is possible for power-save. The ISTBY-line must be low in case of STBY. There is also a „power fail" circuit on the PS-schematic which is necessary to mute AUDIO when IPFAIL is low.

9.3 Analog Board Europe

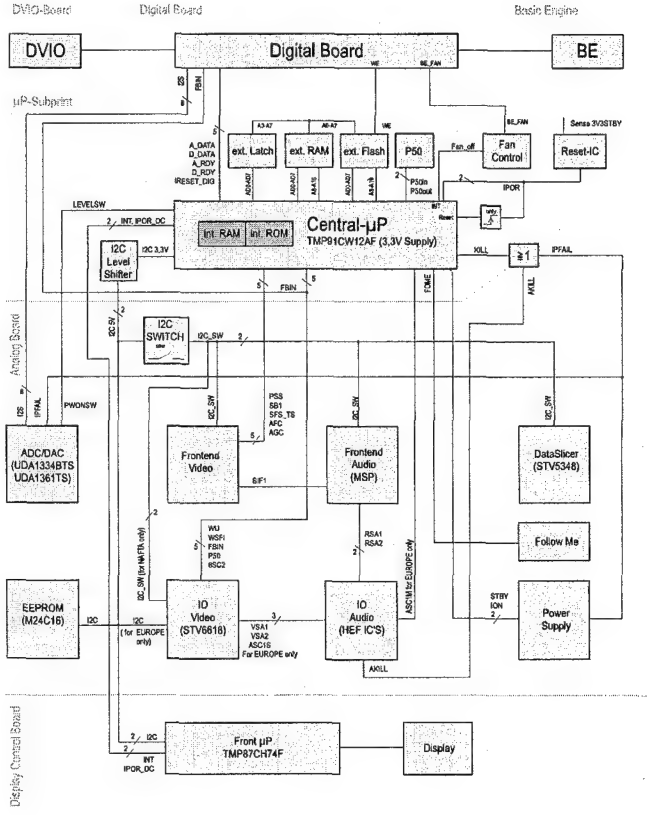
9.3.1 General

This PCB consists out of the following parts:

- Power-Supply-Unit
- Frontend (Audio & Video)
- Input/Output-switching
- Audio ADC- & DAC-processing
- VPS/PDC- and Text-Data slicer
- Analog Follow-Me Circuit

All functional groups are either controlled via I²C-bus or via separate signal lines by the Central-Controller on the µP-Sub-Board. This sub board is directly soldered in onto the analog PCB. During Stand-By mode of the set, several parts are not supplied (Tuner, MSP, ...). The microprocessor is running and maintains the clock of the set.
To avoid bus blockades the I²C-bus ("SCLSW" & "SDASW") to/from these units is decoupled via transistors [7419], [7420] from the general bus ("SCL" & "SDA").

Blockdiagram Control Lines and Bus Systems



TR 01054_001
170502

9.3.2 Power Supply Unit

Functional Principle:
This power supply works in the way of a flyback converter. In the mains input part [1931 to 2309], the mains voltage is rectified and buffered in the capacitor [2309]. From this direct voltage at [2309] energy is transferred into the transformer [5300, pins 7-5] during the conductive phase of the switching transistor [7307] and is stored there as magnetic energy. This energy is passed to the secondary outputs of the power supply in the blocking phase of the switching transistor [7307]. With the switch-on time of the switching transistor [7307], the energy transferred in every cycle is regulated in such a way that the output voltages remain constant regardless of changes in the load or mains voltage. The power transistor is driven by the integrated circuit [7313].

Mains input part:
The mains input part extends from the mains socket [1931] to the capacitor [2309]. The diodes [6301, 6302, 6305 and 6306] rectify the AC supply voltage, which is then buffered by the capacitor [2309]. The common mode coil [5302] and capacitor [2302] work as a filter to block interference arising in the power supply from the mains. Components [1302], [3306] protect the power supply against short-term over voltages in the mains, e.g. caused by indirect lightning.

Start-up with Mains-on:
After connecting the power cord to the mains, the capacitor [2325] is loaded via a current source between pin 8 and pin 1 in the IC [7313]. Once the voltage on [2325] and therefore the supply voltage V_{cc} of the IC [7313] has reached approx. 11V, the IC starts up and provides pulses at its output pin 5. These pulses are used to drive the gate of the power transistor [7307]. The frequency of these pulses is depending on load and mains voltage. The current consumption of the IC is approx. 5 mA at V_{cc} in normal mode.
If V_{cc} drops to below approx. 9V (e.g. with power limitation) or if V_{cc} exceeds approximately 16V (e.g. interruption of the control loop), the output of the IC [7313, pin 5] is blocked and a new start-up cycle begins. (See also "Overload, Power Limitation, Burst Mode" section)

Normal operation:
With increasing load on one or more of the power supply outputs, the switch-on time for the power transistor [7307] increases, and thus also the peak value of the delta-shaped current through this power transistor. The equivalent voltage of this current profile is passed from resistors [3321] and [3352] via [3385] to pin 5 of the IC [7313]. If the voltage on pin 2 reaches approx. 0.4V in one switching cycle, the conductive phase of the switching transistor is ended immediately. The check is done in each individual switching cycle. This process ensures that no more than approx. 50W can be taken out from the mains (= **power limitation**).
If the power supply reaches the power limit, the output voltages and the supply voltage V_{cc} on pin 1 of the IC [7313] will be reduced following further loading. If V_{cc} is less than approx. 9V at any point during this process, the output of the IC [7313, pin 6] is blocked. All output voltages and V_{cc} decrease and a new start-up cycle begins. If the overload status or short-circuit remains, the power limitation will be activated immediately and the voltages will again decrease, followed by another start-up cycle (**Burst Mode**). The amount of power taken up from the mains in burst mode is low.

Overload, power limitation, burst mode
With the power supply in normal mode, the periodic sequences in the circuit are divided primarily into the conductive and blocking phase of the switching transistor [7307]. During the **conductive phase** of the switching transistor [7307], current flows from the rectified mains voltage at capacitor [2309] through the primary coil of the transformer [5300, pins 7-5], the transistor [7307] and resistors [3321, 3352] to ground. The positive voltage on pin 7 of the transformer [5300] can be assumed as constant for a switching cycle. The current in the primary coil of the transformer [5300] increases linearly. A magnetic field representing a certain value of the primary current is formed inside the transformer. In this phase, the voltages on the secondary coils are polarized such that the diodes [6300, 6303, 6307, 6308, 6310, 6313, 6317 and 6319] block.
From the controller [7315] a current is supplied into the CTRL input on the IC [pin 3, 7313] via optocoupler [7314]. Once the switch on time of the switching transistor [7307] - that corresponds to the current supplied into the CTRL input - has been reached, the switching transistor [7307] is switched off.
When the switching transistor has been switched off, the **blocking phase** begins. No more energy will be transferred into the transformer. The inductivity of the transformer will still attempt to keep the current flowing at a constant level (U=L*di/dt). Switching off transistor [7307] interrupts the primary current circuit. The polarity of the voltages on the transformer is reversed, which means that the diodes [6300, 6303, 6307, 6308, 6310, 6313, 6317 and 6319] become conductive and current flows into the capacitors [2305, 2312, 2319, 2322, 2326 and 2328] and the load. This current is also ramp-shaped (di/dt negative, therefore decreasing).
The **feedback control** for the switched-mode power supply is done by changing the conductive phase of the switching transistor so that either more or less energy is transferred from the rectified mains voltage at [2309] into the transformer. The regulation information is provided by voltage reference [7315].
This **element** compares the 5V-output voltage via voltage divider [3332, 3333, 3334] with an internal 2.5V reference voltage. The output voltage of [7315] passes via an optocoupler [7314] for insulation of primary and secondary parts as a current value into pin 3 on the IC [7313]. The switch-on time of the transistor [7307] is inversely proportional to the value of this current.

Standby modes:
In the 'AV-Standby' operating mode of the set, the 'ION' control line is primarily used to switch off all output voltages for Basic Engine and Digital Board (supplies 3V3, 5V, 12V, SN and 4V6 at Connectors 1932 and 1933) of the power supply. This reduces the amount of power taken from the mains. In Low Power Standby mode additionally the 'STBY' control line is used to switch off output voltages 5SW and 8SW. This reduces power consumption to less than 3W. The power supply will continue operating in Standby mode with a switching frequency of approx. 25 kHz.

9.3.3 Frontend

This unit is designed to support two basic versions, which are distinguished by a different assembly variant only (one for multistandard and the second for Pal-I only) and comprises the following parts:

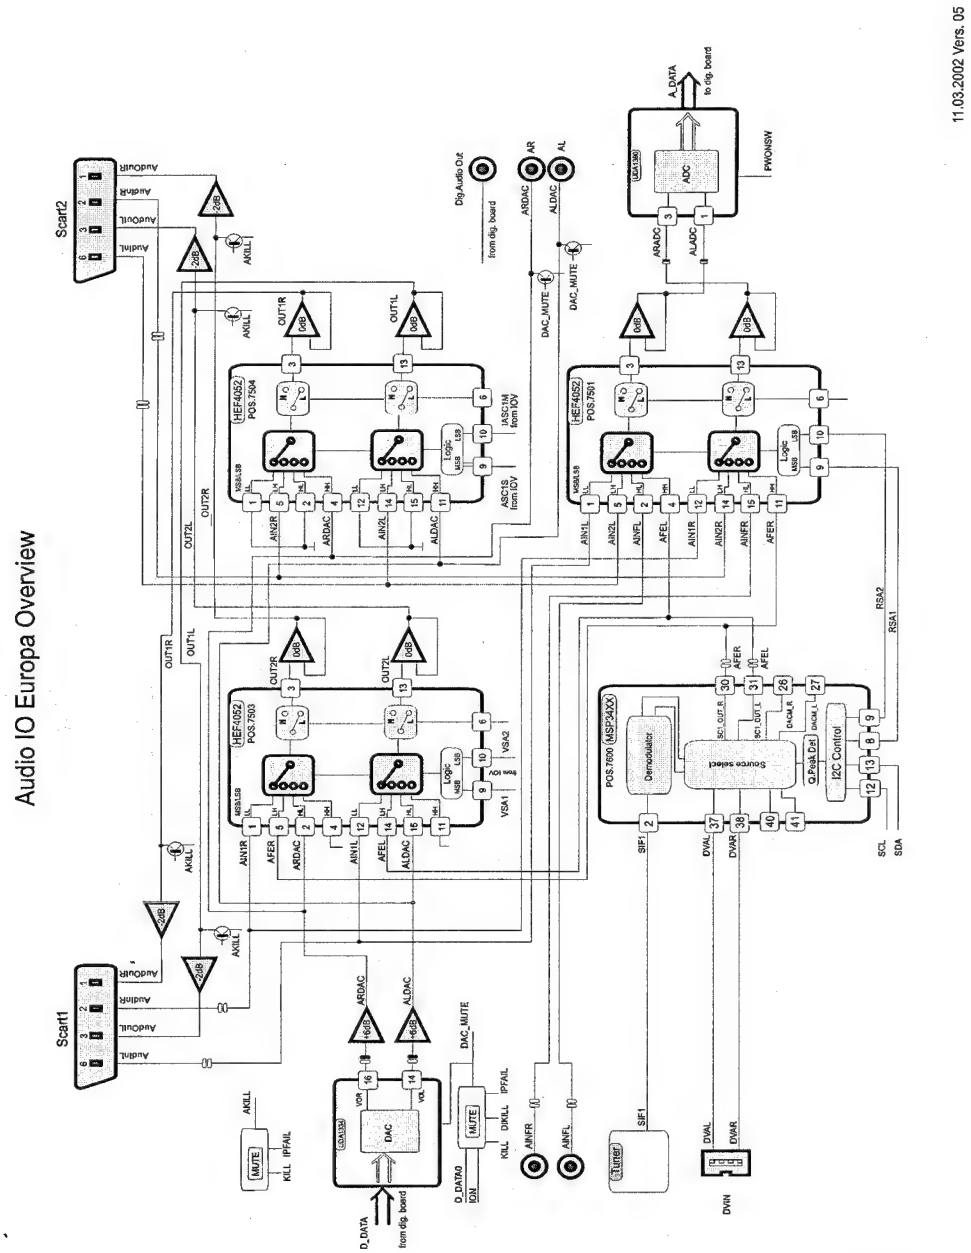
- Tuner UV1316K [1705]
- IF amplifier & video demodulator IC TDA 9818/9817 [7710]
- Sound processor MSP3415G [7600]

Tuner and IF selection
The Tuner [1705] converts the RF-signal coming from the antenna input to an IF-signal. The tuner is fully controlled via I²C-bus of the CC-µP. [1705] is also equipped with a "passive-loop-through" between antenna-in and –out to save power in stand-by of the set, when the complete part is not supplied.
The IF frequency of the video carrier is 38.9 MHz for all systems except SECAM L' (34.0 MHz).
A quasi-split audio system is used. Separate surface-wave filters (SAW) are required. [1701], [1703] for video, [1702] for audio. [1701] is switched into the signal path for DK/I-SECAM L/L' reception, if the signal "SFS_TS" is "high". In this case the switches [7704], [7705] are open and the diode [6703] is conducting. [1703] is switched into the signal path for BG reception ("SFS_TS" is "low"). Then the switch [7712] is open and the diode [6704] is conducting. For DK/I-SECAM L/L' reception, an additional circuit for suppressing the audio carrier of the adjacent channel is used. This circuitry is adjusted by coil [5710] for maximum suppression at 40.4MHz.

IF demodulator
The signal from the tuner and IF-selection circuit is processed by the demodulator IC TDA 9818/9817 [7710]. The signal "PSS" to pin 3 switches between demodulation of positive (SECAM only) or negative modulated video carriers. A QSS-audio-IF signal SIF1 is generated for demodulation in the sound processor [7600]. The audio-IF carrier is selected in the audio SAW filter [1702]. This filter is switched for SECAM L'. If the signal "SB1" is "high", the switch [7714] is closed and the diode [6705] is not conducting. For all other standards the diode [6705] is conducting and the switch [7714] is open. The output signal of this SAW filter is firstly processed in the TDA 9818. Audio carriers are converted from the tuner IF level to the audio IF position and further processed in the audio demodulator [7600]. The AFC coil [5711] on the TDA 9818/9817 is adjusted so that when a frequency of 38.90 MHz is supplied to the IF output of the tuner, the AFC voltage on pin 17 of [7710] is 2.5V. The setting of the picture carrier frequency for SECAM L in the TDA 9818 is achieved by connecting pin 7 of the IC via a resistor [3710] to ground. The switch [7701] and the signal "SB1" do this. The HF-AGC is set using the potentiometer [3724] so that, with a sufficiently large antenna input signal (74 $dB_{\mu V}$), the voltage at the IF output of the tuner [1705] pin 11 is 500 mV_{pp}. This setting must be carried out when the audio carrier is switched off. The demodulated video signal appears on pin 16 of [7710]. The AGC voltage at pin 4 is used to determine the antenna signal strength after a buffer [7717] with the signal "AGC" and an analog input port of the CC-µP. The trap [1704] reduces the sound carrier remainders in the video for BG standards. The trap [1706] works in the same way for the Pal-I standard only. For all other standards the switch [7713] is closed via [7706] and "SFS_TS"-line set "high" to bypass this trap. In these cases the selectivity of the SAW filter [1701] is sufficient. The coil [5713] for non-BG standards realizes a frequency response correction. This correction is not desired for SECAM L' and therefore short-circuited by [7716] (signal SB1 is "high" and [7702] has on-status). The demodulated video signal "VFV" is available after the buffer and limiting stage for noise peaks [7711]. The FM-PLL demodulator function of TDA 9818 is not necessary and therefore deactivated by the resistor [3739].

Audio demodulator
The sound demodulation is done by the MSP3415 [7600], which is also fully controlled via I²C-bus by the CC-µP (determination of bandwidth, amplitude, standard, ...).The audio signals are available at pin 30 and pin 31 of [7600] and fed as "AFER"- & "AFEL"-line to the audio-I/O for further processing.

9.3.4 Audio routing



TR 01055_001
170502

The processing of audio is always done in stereo (e.g. separate left- and right-channel) and the complete switching is realized by using HEF4052, which is a dual four-to-one multiplexer. In principle there are three independent selectors:

a) Scart 1-Output-Path:

Pos [7504] is used to select either Scart 2-Input ("AIN2L"/ "AIN2R") or the signal directly from the audio DAC [7001] ("ALDAC"/"ARDAC") as the output source for Scart 1 ("AOUT1L"/"AOUT1R").

The control is done by means of the lines "ASC1S" coming from [7408] (IC [7408] acts as a port expander for the CC-µP) and "ASC1M", which is directly coming from the CC. Pos [7412] is used for level adaptation (3V3 to 5V) in between.

b) Scart 2-Output-Path:

Pos [7503] selects between Scart 1-Input ("AIN1L"/"AIN1R"), signals from the internal frontend ("AFEL"/"AFER") via MSP [7600] or audio directly from the DAC [7001] ("ALDAC"/ "ARDAC"). The outputs of this switch are routed to Scart 2 ("AOUT2L"/AOUT2R"). This switch is controlled via "VSA1"- and "VSA2"-line. These lines come from [7408] that is acting as a port expander for the CC-µP.

c) Record-Path:

Pos [7501] selects either signals from Scart 1 ("AIN1L"/ "AIN1R") or Scart 2 ("AIN2L"/"AIN2R") or Cinch-Front ("AINFL"/ "AINFR") or the MSP [7600] ("AFEL"/"AFER") and routes to the audio ADC [7005] ("ALADC"/"ARADC") for record purposes. The switch is controlled via "RSA1"- and "RSA2"-signals. These signals come from the MSP [7600], which acts as a port expander of the CC-µP. As there can also exist a fifth input in case of DV-In is present the corresponding analog audio signals from the DVIO-board are firstly routed via extra cable and connector [1960] to the MSP. The MSP acts as a preselector between audio from internal frontend or the DV-Input.

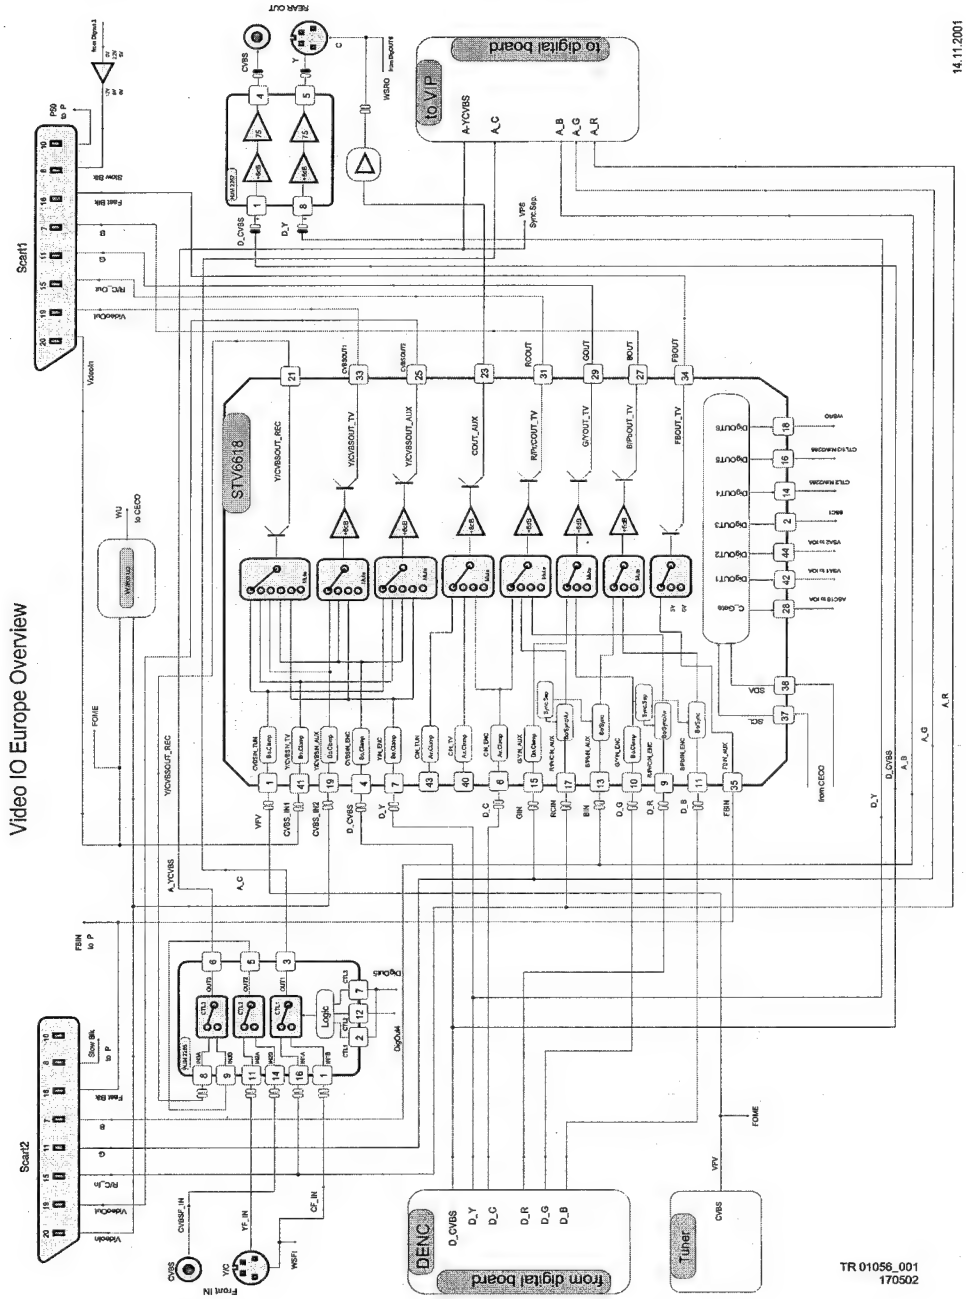
Each of these three selectors ([7501], [7503] & [7504]) has a separate Op-Amp on the output for level-adaptation-, performance- and line-driving-reasons. [7505-A & -B] for record, [7502-C & -D] for Scart 1-Output and [7502-A & -B] respectively for Scart 2. Every audio output line on the two Scart connectors can be "killed" (muted) by a extra transistors ([7506], [7508], [7509] &[7511]), which can be activated by the "AKILL"-line. This signal is generated by the circuit around [7404]/[7421] and is a combination of the "KILL"- from the CC-µP and the "IPFAIL" of the power-supply-unit.

Additionally to analog audio the set is also equipped with a digital output via cinch plug [1951]. The signal is generated on the dig. board and routed via audio interface cable and connector [1900] to the Ana-PCB. Here the "DAOUT"-line first passes a 6-fold inverter [7580] being used as a driver and for performance reasons (noise reduction, jitter, ...). Afterwards a transformer [5580] is necessary to achieve the correct level and also to have a floating output with isolated ground before the signal is fed via [3580] to cinch plug [1951]. The capacitor [2580] performs an AC-coupling between connector- and set-ground.

9.3.5 Audio ADC/DAC

The conversion of analog audio signals from the record-selector [7501] in the I/O ("ALADC"- & "ARADC") is done via UDA1361TS [7005]. This IC can process input signals up to $2V_{rms}$ by using external resistors [3039], [3041] in series to the input pins. As the level from the DVIO-Board is only $1V_{rms}$ a 6dB step can be performed by setting pin 7 of [7005] to 3,3V via [7006] and the "PWONSW"-line controlled by the CC-µP to use the whole dynamic range of the ADC. All required clock signals are generated on the dig. board and only the audio data ("A_DAT"-line) are routed from Ana- to Dig.-PCB for further processing.
The transformation of dig. audio back into the analog domain is done by UDA1334BTS [7001]. All necessary clock signals are coming from the dig. board and dig. audio data ("D_DATA0"-line) are converted into analog signals, which are available at pin 14 and pin 16 of [7001]. Afterwards an Op-Amp. [7002] (line driver & level adaptation) and a low-pass-filter to increase signal performance (noise, distortions,...). is passed. Then both signals ("ALDAC" & "ARDAC") are directly routed to the rear cinch output and also used in the audio-I/O for further processing. The DAC has also a mute possibility, which can be activated by setting pin 8 to 3,3V via [7003]. This mute is controlled either by the dig. board ("D_IKLL"-line) or the "IPFAIL"-signal from power-supply-unit.
In addition to that the DAC [7001] and the cinch outputs can be killed (muted) in case of "digital silence" by the circuit around [7008],[7009] and [7010], when no audio data are available (e.g. "D_DATA0"-line zero).
This function can be also activated via the "ION"-line (set to high during any stand-by mode). To avoid signal distortions (clipping) the mute transistors for cinch rear out [7415], [7416] are decoupled via [7011].

9.3.6 Video-routing



The complete Video-I/O-switching is basically realized by the matrix switch STV6618 [7408], which is controlled via I²C-bus by the CC. All used outputs excluding pin 21 (Y/CVBS-REC) have a 6 dB-amplification and a 75 Ohms driver-stage inside. This IC includes also several digital outputs, which are used for switching purposes on the analog board. The record selector inside the switch selects between the CVBS from frontend ("VFV"), the input from Scart 1 ("YCVBSIN1") or the signal from Scart 2 ("YCVBSIN2"). Afterwards the signal passes another switch [7411] in which a selection between signals from the front or the presetected ones are done. The output signals of [7411] are fed as "A_YCVBS"- and "A_C"-line to the digital board for further processing.

To reduce the number of external presets there exists only one preset for CVBS- and Y/C-front. The set automatically detects between the two inputs depending on the presence of a video signal (sync separator-circuit on mP-sub-board) where Y/C has higher priority.

The R/G/B-inputs and the Fast-Blanking-line from Scart 2 are directly routed to the digital PCB. These signals are also available on the corrasponding input-pins of the STV6618 to enable a loop-through in AV-Standby. In this mode the set has to behave like a cable between the two Scart-connectors. AV-Standby is activated either by a "high" level on pin 8 of Scart 2 ("active device is present") or by the "WU"-line (wake up). This signal is generated out of the circuit around [7401], [7402] & [7403] and will become "high" if there is a signal on pin 20 of Scart 1- or Scart 2. The detection of the input level on pin 8 of Scart 2 ("8SC2") is done via an analog input of the CC-µP (less than 2V means inactive; 4,5V to 7V determines a source with 16:9 picture-ratio and greater than 9,5V is an active 4:3 source).

All signals from the digital board ("D_R", "D_G", "D_B", D_C", "D_Y" and "D_CVBS" are routed to the proper inputs of the STV6618 for amplification and driving purpose before they can be seen on the appropriate Scart outputs.

Parallel to this the "D_CVBS"- and the "D_Y"-line are passing a 6 dB-amplifier and driver-IC [7410] and are then routed to the CVBS-Cinch and Y/C-out rear. The chroma signal for this Y/C out is coming from the STV6618 - which makes the 6 dB-amplification - and a driver [7406] in between.

The detection of the picture ratio information on the Y/C-input front is made by measuring the DC-level on the Chroma signal via analog input of the CC-µP ("WSFI"-line). In case the level is higher than 3,5V the input signal is a 16:9 source. If the level is lower than 2,4V the picture ratio is 4:3.

For generation of the appropriate DC-voltage on the Y/C-out rear the "WSRO"-line is controlled via pin 18 of [7408] by the CC-µP (Pin 18 set to low means 4:3, pin 18 set to high determines 16:9).

The control of the switching voltage (Pin 8 of Scart 1) is done via 3-level-pin (nr.2) of the STV6618 [7408] and the transistors [7405], [7407] & [7409]. A "low" on pin 2 of [7408] causes around 11V on pin 8-Scart 1 (e.g. source with 4:3 picture-ratio active). Medium level (2,5V) on pin 2 of the STV6618 generates medium level (approx. 6V) on pin 8-Scart 1 (e.g. active source with 16:9) and a "high" on pin 2 of the STV6618 pushes pin 8-Scart 1 to "low" (e.g. inactive).

9.3.7 VPS/PDC- and Text-Datasliicer

For extraction of relevant information out of the video signal (time controlled recording, net-name-identification, time- & date- download) the STV5348 [7931] is used. Data transfer to/ from the CC is fully done via I²C-bus and the input signal for decoding is the same as the one being routed to the digital board for recording purposes ("A_YCVBS"-line).

9.3.8 Analog Follow-Me

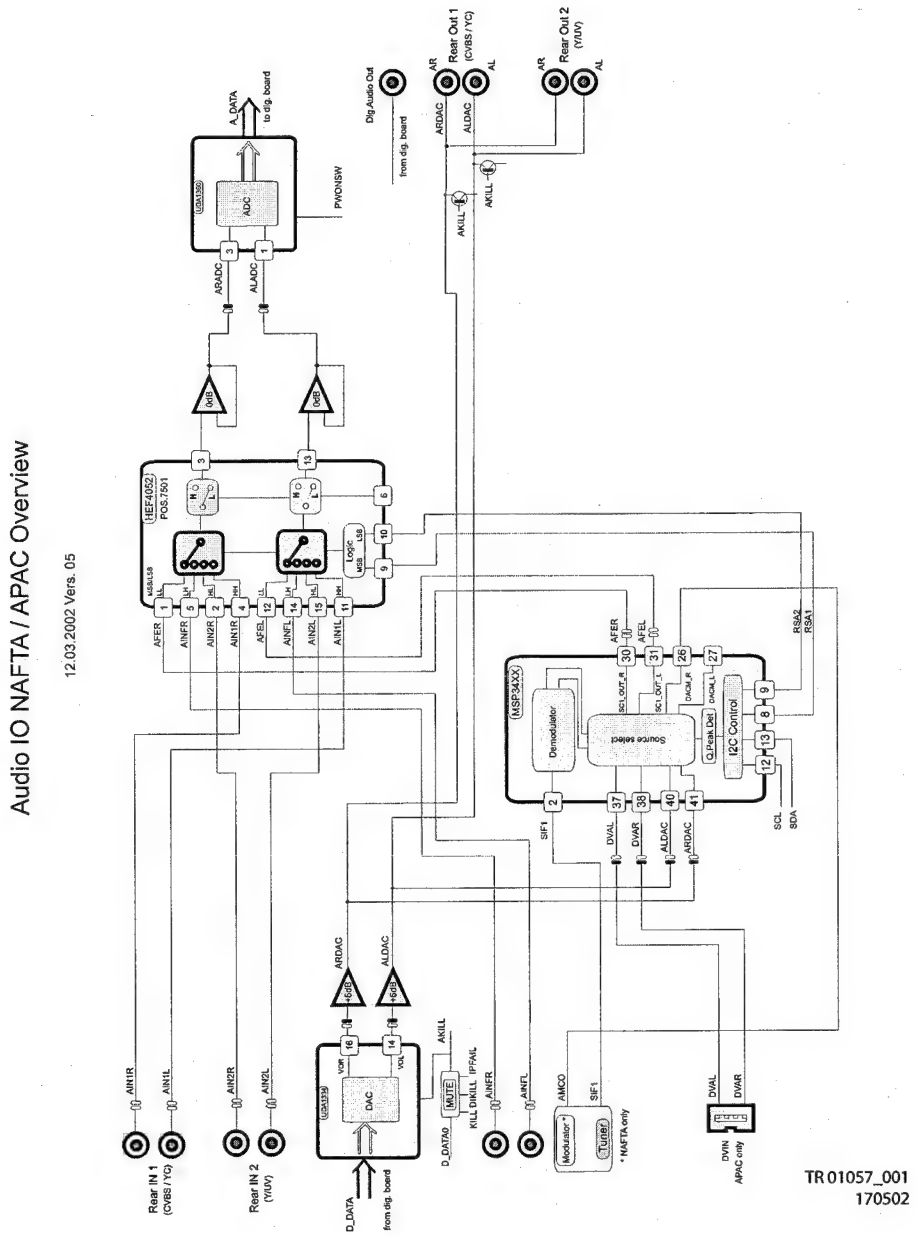
This circuit compares the video signal from the internal frontend ("VFV") of the recorder with that one of the connected TV-set ("CVBS1"). The TV set delivers the signal via Scart-cable. A comparator [7934] and several additional parts ([7932], [7933], ...) are used to compare the two video signals. In case of both input signals are equal the output-line of this circuit ("FOME") is set to low. Detection is made via an input port of the CC-µP.

9.4 Analog board NAFTA- & APAC-Pal- version

9.4.1 Frontend NAFTA

[1701] demodulates the video signal from the antenna input. Tuner and IF-demodulator are in one unit. Also a modulator is included in that part. The audio- and video-signal to the modulator are the ones from the selected input or the playback path of the set ("AMCO"- and "D_CVBS"-line). The control of the tuner is fully done via I²C-bus by the CC-µP. Via the "MSW"-signal and [7701] the modulator is switched on and off. In opposite to this the antenna loop-through is opened or closed. In the APAC-Pal version POS [1700] is used with the difference that it demodulates only PAL- instead of NTSC-signals and has also no modulator. The "CSW_SSW" line switches the modulator between CH3 or CH4 in the NTSC-version.
To achieve optimal tuning the "AFC"-signal is detected by the CC via an analog input; [3701], [3702] and [3703] are used for level adaptation (5V to 3V3). Pos [7700] is a driver for the video signal.
The sound demodulation is realized by the MSP34x5 [7600], which is also fully controlled via I²C-bus by the CC-µP (determination of bandwidth, amplitude, standard, ...). The audio signals are available at pin 30 and pin 31 of [7600] and fed as "AFER"- & "AFEL"-line to the audio-I/O for further processing. As this PCB is used for different regions (NAFTA and APAC) either MSP3425 or MSP3415 are assembled.

9.4.2 Audio routintg



The sound processing is always done in stereo (that means separate left- and right-channel). The complete selection of the audio signal for recording is done by a HEF4052 [7501], which is a dual four-to-one multiplexer. The Op-Amp on the output [7504] is necessary for performance reasons and acts also as a driver. The selected signals "ARADC" and "ALADC" are directly fed to the Audio-ADC. The input lines for the selector [7501] are coming either from MSP [7600] ("AFEL"/"AFER") or cinch rear in 1 ("AIN1L"/"AIN1R") or cinch rear in 2 ("AIN2L"/ "AIN2R") or the cinch in front ("AINFL"/AINFR"). The [7501] is controlled via "RSA1"- and "RSA2"-signals coming from the MSP [7600]. The MSP acts as a port expander of the CC-µP.

As there can exist also a fifth input in case of DV-In is present the corresponding analog audio signals from the DVIO-board are firstly routed via extra cable and connector [1960] to the MSP, which acts as a preselector between audio from internal frontend or the DV-Input.

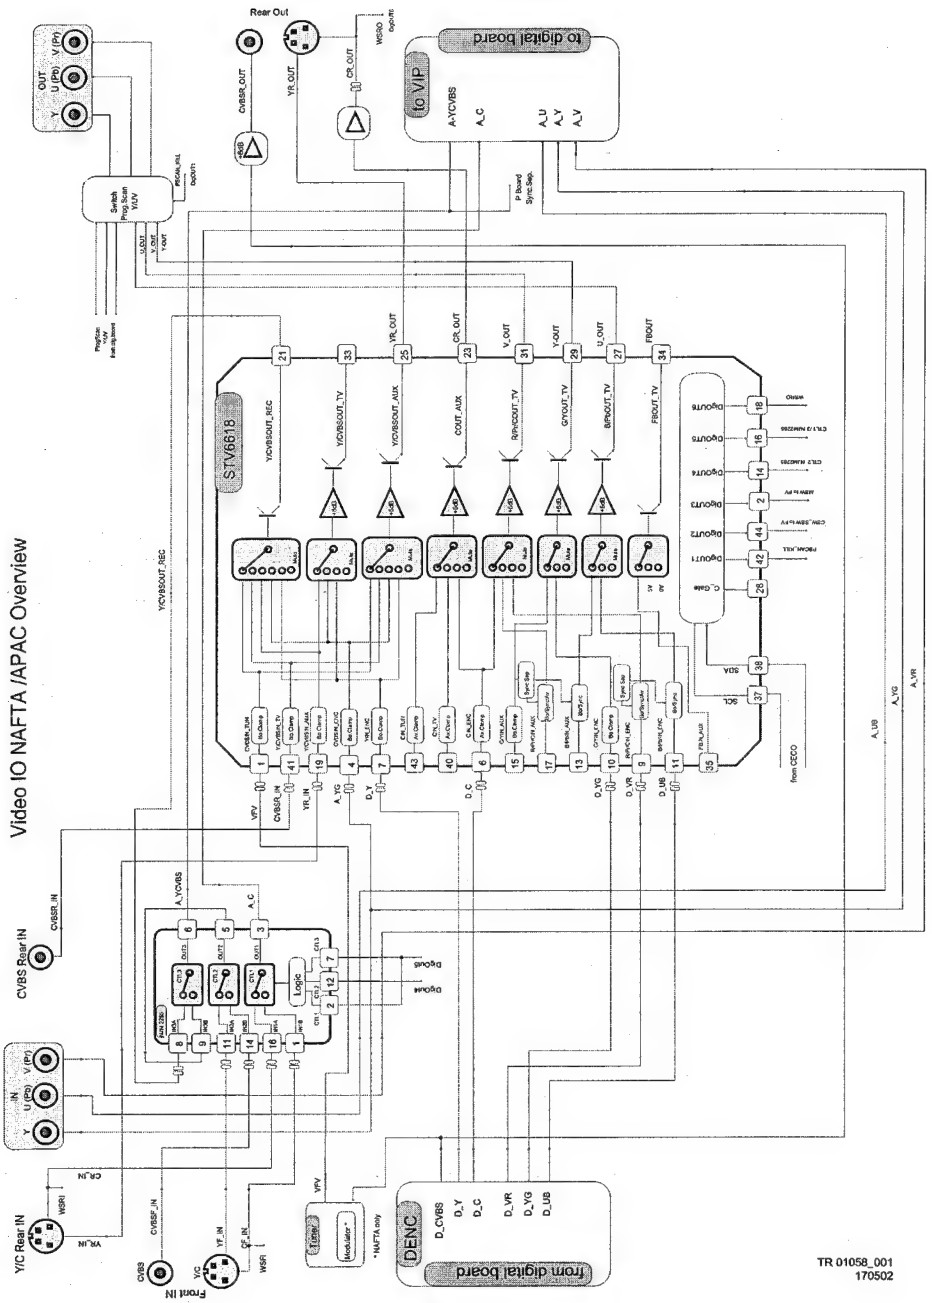
The signals from the audio DAC part ("ARDAC"/"ALDAC") are directly routed to both cinch rear outputs, which are connected in parallel. To avoid plops and any other audible noise on the output there is a mute-stage implemented [7509], [7511] for each channel. The activation is done via "AKILL"-line, which is a combination of the "KILL" from CC-µP, "DAC_Mute" from DAC-part and "IPFAIL" of the power-supply-unit. The circuit around [6430], [6431], [7430] and [7404] generates this signal.

Additionally to analog audio the set is also equipped with a digital output via cinch plug [1951]. The signal is generated on the dig. board and routed via audio interface cable and connector [1900] to the Ana-PCB. Here the "DAOUT"-line first passes a 6-fold inverter [7580] being used as a driver and for performance reasons (noise reduction, jitter, ...). Afterwards a transformer [5580] is necessary to achieve the correct level and also to have a ground isolated (floating) output before the signal is fed via [3580] to cinch plug [1951]. The capacitors POS [2580], [2582] & [2583] perform on the one side an AC-coupling between connector- and set-ground. On the other side they are necessary to keep radiation at a minimum for EMC reasons.

9.4.3 Audio ADC/DAC

The conversion of analog audio signals from the record-selector [7501] in the I/O ("ALADC"- & "ARADC") is done via UDA1361TS [7005]. This IC can process input signals up to $2V_{rms}$ by using an external resistor [3039], [3041] in series to the input pins. As the level from the DVIO-Board is only $1V_{rms}$ a 6dB step can be performed by setting pin 7 of [7005] to 3,3V via [7006] and "PWONSW"-line controlled by the CC-µP to use the whole dynamic range of the ADC. All required clock signals are generated on the dig. board and only the audio data ("A_DAT"-line) are routed from Ana- to Dig.-PCB for further processing.
The transformation of dig. audio back to the analog domain is done by UDA1334BTS [7001]. All necessary clock signals are coming from the dig. board and dig. audio data ("D_DATA0"-line) are converted into analog signals, which are available at pin 14 and pin 16 of [7001]. Afterwards an Op-Amp. [7002] (line driver & level adaptation) and a low-pass-filter to increase signal performance (noise, distortions,...). are passed. Then both signals ("ALDAC" & "ARDAC") are directly routed to the rear cinch output. The DAC has also a mute possibility, which can be activated by setting pin 8 to 3,3V via [7003]. This mute is controlled either by the dig. board ("D_IKLL"-line) or the "IPFAIL"-signal from power-supply-unit.
In addition to that the DAC [7001] and the cinch outputs can be killed (muted) in case of "digital silence" by the circuit around [7008],[7009] and [7010], when no audio data are available (e.g. "D_DATA0"-line zero)

9.4.4 Video-routing



Block Diagram Digital Board

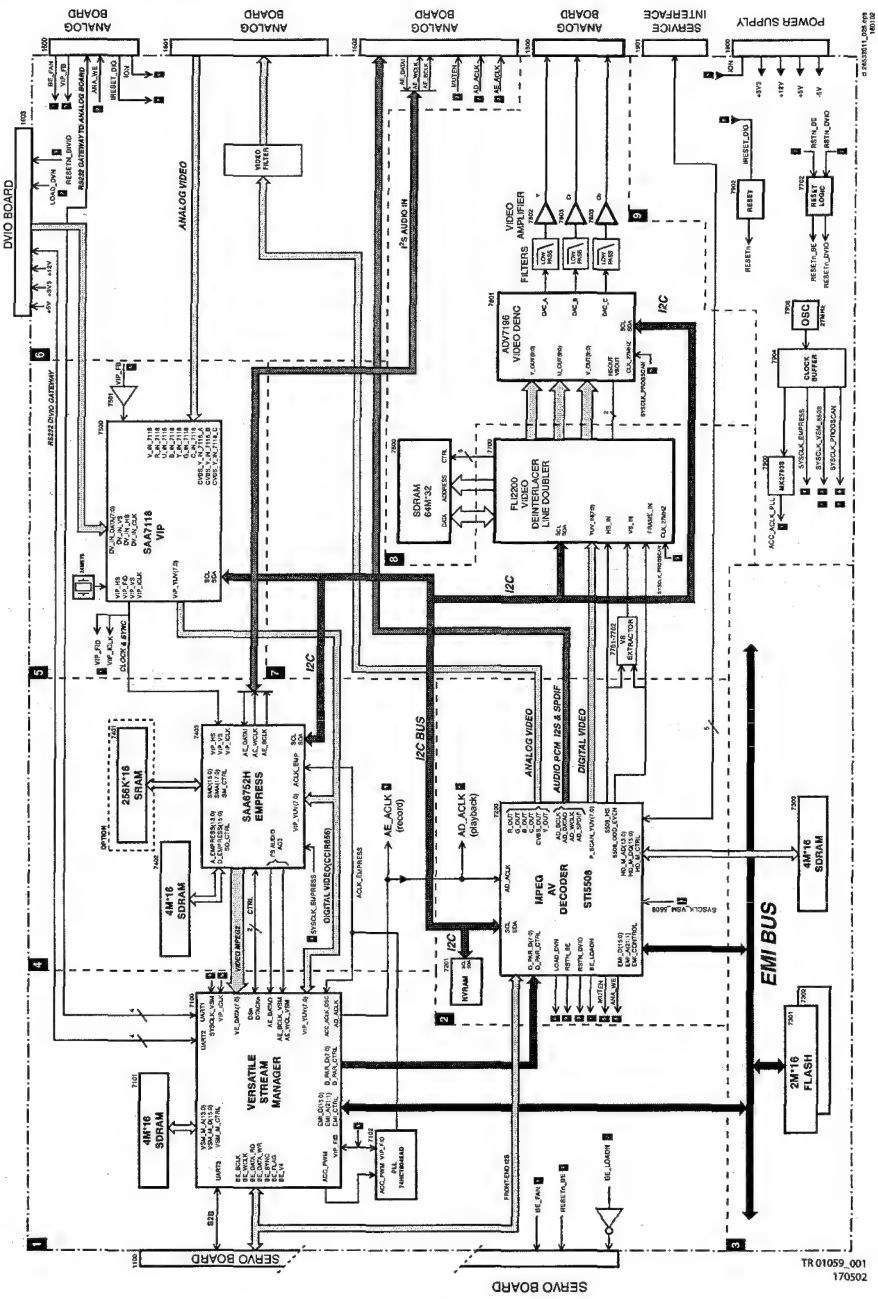


Figure 9-1

The complete Video-I/O-switching is basically realized by the matrix switch STV6618 [7408], which is controlled via IIC-bus by the CC. All used outputs excluding pin 21 (Y/CVBS-REC) have a 6dB-amplification and a 75 Ohms-driver-stage inside. This IC also includes several digital outputs, which are used for switching purposes on the analog board. The record selector inside the switch selects between the CVBS from frontend, the CVBS from Cinch-Rear or Y from the S-Video-input rear. Afterwards the signal passes another switch [7411] in which a selection between signals from the front or the preselected ones is done. The output signals of [7411] are fed as "A_YCVBS"- and "A_C"-line to the digital board for further processing.

To reduce the number of external presets there is only one station for CVBS or Y/C (front and rear). The set automatically detects between the two inputs depending on the presence of a video signal (sync separator-circuit on mP-sub-board) where Y/C has higher priority.

The Y/U/V-inputs are directly routed to the digital PCB. Only the Y-line has to be present additionally on pin 4 of [7408] for video recognition.

The signals "D_C" and "D_Y" are fed through [7408] (6dB amplification) and via [7406], [7409] used as driver to the S-Video output connector. The "D_CVBS" line is directly routed to the modulator and via the circuit around [7431] and [7432] amplified by 6dB before it is fed to the CVBS output plug.

The Y/U/V signals from the digital board are also passing [7408] for 6dB amplification and driving purpose.

To achieve optimal picture quality the set is equipped with a simple progressive scan function based on a so-called line doubler. The complete generation of the signal is done on the digital board and via a separate cable and connector [1946] the corresponding Y/U/V lines are routed to the analog PCB. As there is only one Y/U/V output available a switching between interlaced and progressive output is necessary. While the transistors [7421], [7422], [7424], [7425], [7427] and [7428] are used as driver for Y/U/V progressive, [7423], [7426] and [7429] together with [7405] are necessary for killing these signals via pin 42 of [7408] in case the interlaced is selected ("PSCAN_KILL"-line set to low). If progressive output is active the pins 27, 29 and 31 of [7408] are set to high impedance and "PSCAN_KILL" is also high (e.g. 5V).

The detection of the picture ratio information on the Y/C inputs (rear or front) is done by measuring the DC-level on the Chroma signal via an analog input of the CC-µP ("WSRI"- and "WSFI"-line). In case the level is higher than 3,5V the input signal is a 16:9 source, if the level is lower than 2,4V the picture ratio is 4:3.

For generation of the appropriate DC-voltage on the Y/C output the "WSRO"-line is controlled via pin18 of [7408] by the CC-µP (Pin 18 set to low means 4:3, pin 18 set to high determines 16:9).

During Stand-By there is also no loop-through of any input to any output performed.

9.5 Digital Board

9.5.1 Record Mode

Video Part

Analog Video input signals CVBS, YC and UV(RGB for EURO and YUV for USA) are routed via the analog board to connector 1601 and sent to IC7500 SAA7118 (Video Input Processor). Digital video input signals (DV_IN_DATA(7:0)) are sent from the DIVIO board through the connector 1603 and further also to IC7500.
IC7500 (VIP) encodes the analog video to digital video and processes the digital video to a digital video stream (CCIR656 format). This output stream (VIP_YUV[7:0]) goes to IC7403 SAA6752H (EMPRESS) and to IC7100 Versatile Stream Manager. The latter uses the data for VBI (vertical blanking interval) extraction.
IC7403 (EMPRESS) encodes the digital video stream into a MPEG2 video stream that is fed to IC7100 (VSM).

Audio Part

I2S audio are sent from the analog board to IC7403 EMPRESS via connector 1602. The EMPRESS compresses I2S audio data into an AC3 audio stream which is fed to IC7100 (VSM).

Front-End I2S

IC7100 (VSM) interfaces directly to the different hardware modules such as Basic Engine, EMPRESS IC7403, MPEG decoder IC7200 (STi5508) and buffers the data streams that are coming from or going to these hardware modules.
In IC7100 (VSM), the video MPEG2 stream and the audio AC3 stream are multiplexed into a I2S packetized stream. The serial data are sent to the Basic Engine to be recorded.

Loop-Through

The multiplexed audio and video stream in the VSM is fed back via the parallel front-end interface to IC7200 (STi5508). This IC decodes the MPEG stream into analog video and I2S audio. The video and audio signals are routed to the analog board via connectors 1601 and 1602. During recording, the recorded signal is present at the outputs of the analog board.

9.5.2 Playback Mode

During playback, the serial data from the Basic Engine is going directly to the STi5505 via the serial front-end I2S interface. The STi5508 is a MPEG & Audio/video decoder and has the following outputs:

- To the analog board:
  - analog video RGB, YC, CVBS
  - I2S audio (PCM format)
  - SPDIF audio (digital audio output)
- To the Progressive scan board:
  - digital video YC(7:0).

9.5.3 S2B Interface

The S2B interface between the VSM (IC7100) and the Servo processor MACE3 controls the Basic Engine during record and playback mode.

9.5.4 System Clock

System clocks(27MHz) of VSM, STi5508, EMPRESS and Progressive Scan are generated by oscillator 7906

9.5.5 Audio Clock

During record mode, the audio clock ACC_ACLK_OSC is generated by IC7102 (PLL) because then, the audio clock must be sychronized with the incoming video (VIP_FID) from the VIP.
During playback mode, the audio clock ACC_ACLK_PLL is generated by the clock synthesizer IC7900 (MK2703S).
Both ACC_ACLK_OSC(also goes to the EMPRESS as ACLK_EMP) and ACC_ACLK_PLL are fed to the VSM. This IC selects the appropriate clock to the STi5508. The EMPRESS IC derives from the incoming ACLK_EMP the I2S audio encoder clocks AE_BCLK and AE_WCLK which are sent to the VSM.

9.5.6 On/Off

The digital board is not powered in standby mode. Control signal ION, coming from the analog board, will enable the PSU and power the digital board.

- ION = High: the digital board is in powered down standby mode
- ION = Low: the power supply to the digital board is enabled

9.5.7 Reset

Control signal IRESET_DIG, controlled by the microprocessor on the analog board is sent to the RESET LOGIC circuit.

- IRESET_DIG = Low in standby mode
- IRESET_DIG = High: the whole system is reset and the Digital board is waked up.

9.5.8 I2C Bus

STi5508 is master of the I2C bus. The following IC's are controlled by the I2C bus:

- IC7201 NVRAM
- IC7403 EMPRESS
- IC7500 VIP
- IC7700 FLI2200 Video Deinterlacer Line Doubler
- IC7801 ADV7196 Video Denc

9.5.9 EMI Bus

The following IC's are connected to the External Memory Interface bus (EMI) which functions as system bus:

- IC7301 and 7302: Flash memories which contain the application and diagnostic software
- IC7100: VSM
- IC7200: MPEG AV Decoder

9.5.10 Progressive Scan

Description
The progressive scan part is integrated in the Digital Board and built around the SAGE FLI2200 de-interlacer / line doubler (7701). This I2C controlled de-interlacer uses a 64Mbit SDRAM (32bit x 2M) to perform high quality deinterlacing (meshing). The de-interlacer gets his digital YUV input data from the STi5508 (7200). The format of the digital YUV input to the SAGE is CCIR656 with separated Hsync, Vsync and odd/even signal running on 27Mhz.
Because the STi5508 doesn't have a Vsync output the odd/even output of this IC has to be translated to a Vsync signal. Some glue logic has been added to extract the vertical sync. The glue logic circuit consists of Flip-Flop IC 74HC74D (7701) and EXOR 74LVC86 (7702). The next diagram shows how the vertical sync is extracted.

Vertical Sync

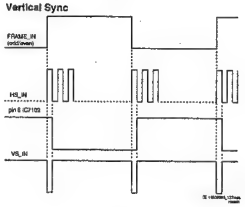

Figure 9-2

The output of the de-interlacer (4:4:4 progressive video) is fed to the Analog Devices ADV7197 MacroVision compliant DENC (7801).
The YUV current output of the DENC is fed via a low pass filter to the single supply output opamps AD8061/8062 (7802-7803). The analog video is fed via a 7 poled flex to the analog board where the YUV 2FH cinch connectors are located.

9.6 DVIO Board

9.6.1 Short Description of the Module:

The DVIO Module is a decoder for DV streams. The module is intended for the Philips DVDR1000/002 en DVDR1000/172 DVD+RW recorders. Input is a stream from a DV-camcorder IEEE1394. Outputs are CCIR656 Video and Analog audio (L+R). A serial control interface is present.
The following picture shows the location of the DVIO Module inside the DVDR set.

Description DVIO Module

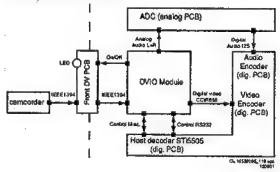

Figure 9-3

9.6.2 Block Diagram

Block Diagram DVIO

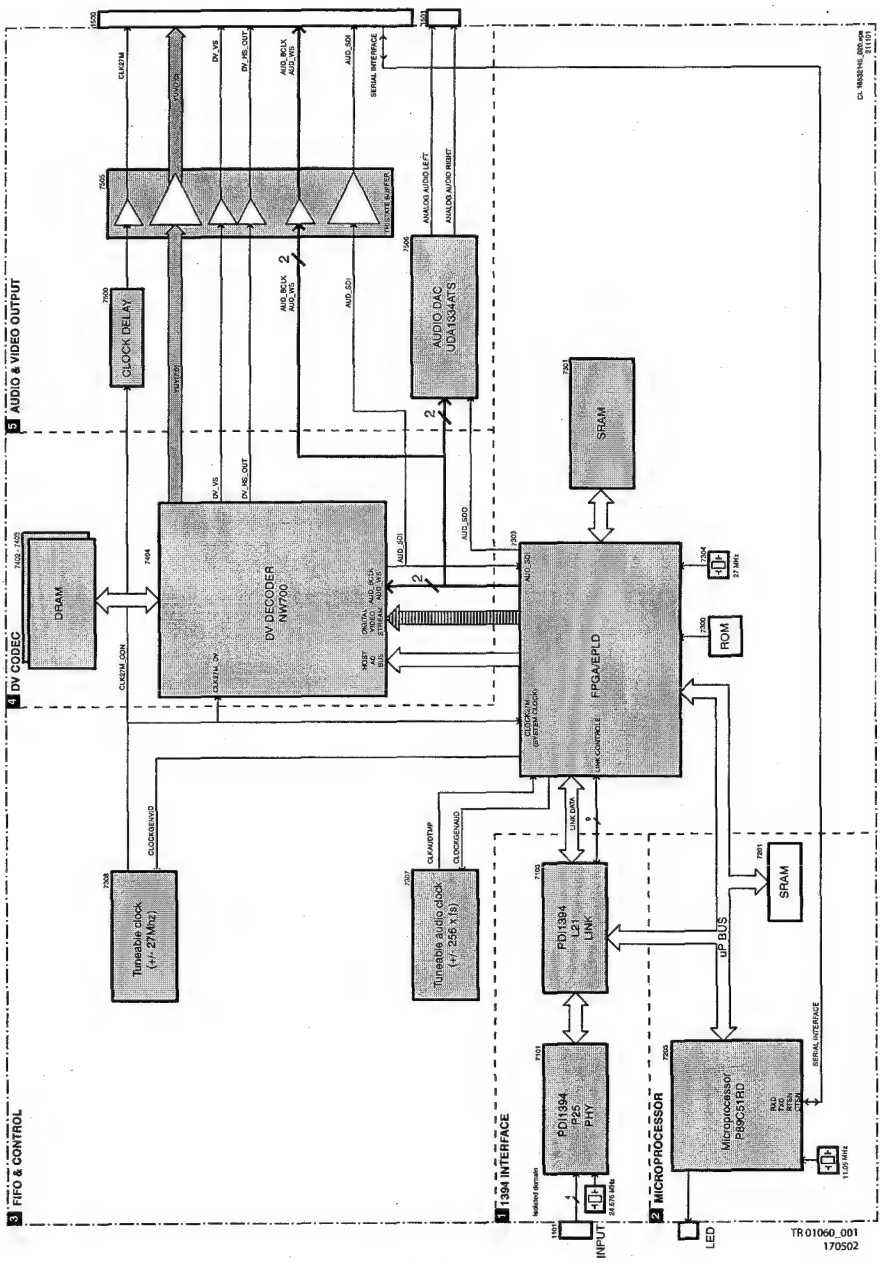

Figure 9-4

9.6.3 Functional Description

The DVIO module consists of the following blocks (see blockdiagram):

1. IEEE1394 Interface
   - PDI1394P25(7101)
   - PDI1394L40(7103)
2. Micro-controller
   - 89C51RD2(7203)
   - 32kb SRAM(7201)
3. FIFO and Control
   - FPGA/EPLD(7303)
   - SRAM(7301)
   - Clock generation(7307, 7308)
     - Independently tuneable audio and video clock, implemented with FPGA and PLL
4. DV-Decoder
   - NW700(7404)
   - EDO DRAM(7402, 7403)
5. Audio & Video output
   - Audio DAC UDA1334ATS(7602)
   - Clock delay(7500)
   - Tristate buffer(7505)

IEEE1394 Interface

The 1394 interface consists of a PDI1394P25 physical layer and a PDI1394L40 link layer.
It has the following features:

- S200 operation (200 megabit per second)
- One i.Link port (4 pin)
- AV link port

Micro-Controller

The 89C51RD2 processor has a 8051 cpu with the following extra features:

- 64 kilobyte of flash memory as program memory
- 1 kilobyte of internal data memory
- watchdog timer
- PCA outputs
- Power control modes
- Speed allowed up to 33 MHz but used at 11.0592 MHz
- On board ISP(In Circuit Programming) functionality

ISP

By use of In Circuit Programming, it is possible to update the software of the DVIO board that is in the 89C51RD2. ISP can be made active by resetting the processor and keeping the ISPN pin low during reset. During ISP, the ISPN signal on the board has to be kept low. A programming voltage of 5V is always present at the Vpp pin. When the ISP mode is active, the new program can be sent to the microprocessor through the serial port.

Fifo and Control

In decode mode, an isochronous AV-stream is flowing through the IEEE1394 interface into the FPGA. The FPGA stores the data in a FIFO buffer (ping-pong buffer type, i.e. 2 buffers that can hold one whole frame each).

Reset

The FPGA controls the reset signals on the board. This has the advantage that it is possible to reset the board both from software and hardware.

Reset

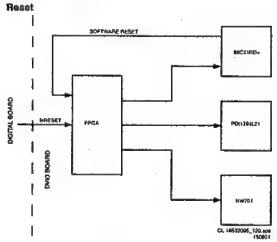

Figure 9-5

The board reset NRESET will reset the whole board, and the software reset can reset everything except the microprocessor itself. Power-on reset is implemented by adding pull-ups and pull-downs to the reset inputs of the devices. Since the FPGA will tri-state all the pins during configuration, reset is active during configuration time. After configuration of the FPGA, the reset signals are driven inactive. The NRESET signal is used to reset the DVIO board. After reset, the tri-state buffers to connector 1500 are disabled.

Clock Circuit

There are 2 clocks to consider in the system, this is the video clock and the audio clock. These two clocks do not have a relation, so these clocks must be considered independently. The video clock is approximately 27 MHz. When data is flowing from an external source that is supposed to have the same frequency, it does not have exactly the same clock. Because of this, buffers may under-run of over-run. Since the clock can not be directly recovered from the 1394 interface, there has to be another solution. This solution is a tuneable clock that is adjusted to the required frequency to process at the rate of the incoming data.
The hardware implementation of such a tuneable clock is as follows:

Clock Circuit

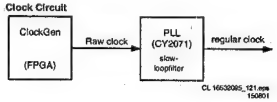

Figure 9-6

The same can be applied for the audio clock. For this clock, a frequency of 8.192 MHz, 11.2896 MHz or 12.228 MHz is required. This depends on the sample-rate frequency(32kHZ, 44.1kHZ or 48kHZ)of the audio signal.

DV Decoder

The AV-data will go from the FIFO to the NW700. The NW700 decodes the stream into video data in 656 format and audio data in I2S format.
The microprocessor has the ability to read the status registers of the NW700 through the FPGA. By reading these registers, extra data from the DV stream, that is not decoded into audio or video, can be sent to the digital board using pin TXD of the serial interface. This data includes time stamp and some more.

Audio & Video Output

The audio I2S data are sent to audio DAC UDA1334. Analog audio left and right signals are connected to the analog board. The tristate buffer enables the digital video stream to the Video Input Processor on the digital board when the DV source is selected.
The clock delay synchronizes the AV clock with the AV data at the output.

PHILIPS Components — Preliminary specification

VHF/UHF splitter-tuner — **UV1316K MK3**

FEATURES

- Member of UV1300 MK3 family of small-sized UHF/VHF tuners
- Integrated passive splitter
- Systems CCIR: B/G, H, L, L', I and I'; OIRT: D/K
- Digitally-controlled (PLL) tuning via I²C-bus
- Fast 400kHz I²C bus protocol compatible with 3.3V and 5V micro controllers
- Off-air, S-cable and hyperband channels
- World standardized mechanical dimensions and pinning. Horizontal mounting is optionally available.

DESCRIPTION

The UV1316K MK3 splitter - tuner belongs to the UV1300 MK3 family of tuners, which are designed to meet a wide range of TV applications. It is a full band tuner suitable for CCIR systems B/G, H, L, L', I and I'. The low IF output impedance is designed for direct drive of a wide variety of SAW filters with sufficient suppression of triple transient. In addition, it is equipped with 2 two standard items, one a 8 level Analog Digital Converter and the other an internal wide band AGC with I²C selectable TOP.

This tuner complies with the requirements of radiation, signal handling capability and immunity conforming to:

- CISPR 13 (1990) incl. amendment 1 (1992) and amendment 2 (1993) and CISPR 20
- European standards CENELEC EN55013, EN55020

MARKING

The following items of information are printed on a sticker that is on the top cover of the tuner:

- Type number
- Code number
- Origin letter of factory
- Change code
- Year and week code

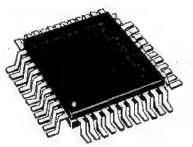
STV6618

VIDEO SWITCH MATRIX FOR DVD

TARGET SPECIFICATION

FEATURES

- I²C Bus Control
- 5 Y/CVBS Inputs, 3 Y/CVBS Outputs
- 3 C Inputs, 1 C Output
- 2 RGB/YPrPb Inputs, 1 RGB/YPrPb Output
- 6 dB Gain on all 150 Buffer Outputs
- Integrated 150 Buffers
- Video Muting on all Outputs
- Bottom Clamp on all CVBS/Y, Average Clamp on C Inputs, Bottom Clamp on RGB, Sync-tip Clamp on PrPb signals
- Bandwidth: 15 MHz
- Crosstalk: 50 dB



TQFP44
(10 x 10 x 1.4 mm)
(Thin Full Plastic Quad Flat Pack)

ORDER CODE: STV6618

DESCRIPTION

The STV6618 is a highly integrated I²C bus-controlled video switch matrix, optimized for use in recordable Digital Video Disk applications or DVD players. It provides video routings required for connections to two external devices (Europe 2 SCARTs), internal tuners, digital encoders and recorders.

1.2 Pin Description

Pin No.	Symbol	Description
1	Y/CVBSIN_TUN	Y/CVBS Input from Tuner
2	DIGOUT3	Digital Output Pin 3
3	GND1	Ground Supply 1 for Video Inputs
4	CVBSIN_ENC	CVBS Input from Encoder
5	DECV	Video decoupling capacitor
6	CIN_ENC	Chroma Input from Encoder
7	YIN_ENC	Y Input from Encoder
8	V_{CC}	+5 V Power Supply for Video Inputs
9	R/PR/CIN_ENC	Red or Pr or Chroma Input from Encoder
10	G/YIN_ENC	Green or Y Input from Encoder
11	B/PBIN_ENC	Blue or Pb Input from Encoder
12	GND2	Ground Supply 2 for Video Inputs
13	B/PBIN_AUX	Blue or Pb Input from Auxiliary (SCART2 or external Cinch)
14	DIGOUT4	Digital Output Pin 4
15	G/YIN_AUX	Green or Y Input from Auxiliary (SCART2 or external Cinch)
16	DIGOUT5	Digital Output Pin 5
17	R/PR/CIN_AUX	Red or Pr or Chroma Input from Auxiliary (SCART2 or external Cinch)
18	DIGOUT6	Digital Output Pin 6
19	Y/CVBSIN_AUX	Y/CVBS Input from Auxiliary (SCART2 or external Cinch)
20	VCCB_REC	Video Output Recorder Buffer Supply Pin
21	Y/CVBSOUT_REC	Y/CVBS Output to Recorder
22	GNDB_REC	Ground Supply for Recorder Buffer
23	COUT_AUX	Chroma Output to Auxiliary (SCART2 or external Cinch)
24	VCCB1	Video Output Buffer Supply Pin
25	Y/CVBSOUT_AUX	Y/CVBS Output to Auxiliary (SCART2 or external Cinch)
26	GNDB	Ground Supply for Video Buffer
27	B/PBOUT_TV	Blue or Pb Output to TV (SCART1 or external Cinch)
28	C_GATE	External Transistor Command for Bidirectinnal B/C SCART I/O
29	G/YOUT_TV	Green or Y Output to TV (SCART1 or external Cinch)
30	VCCB2	Video Buffer
31	R/PR/COUT_TV	Red or Pr or Chroma Output to TV (SCART1 or external Cinch)
32	VCCB3	Video Output Buffer Supply Pin
33	Y/CVBSOUT_TV	Y/CVBS Output to TV (SCART1 or external Cinch)
34	FBOUT_TV	Fast Blanking Output to TV (SCART1)
35	FBIN_AUX	Fast Blanking Input from Auxiliary (SCART2)

Pin No.	Symbol	Description
36	VDD	+5 V Digital Power Supply
37	SCL	I²C Bus Clock
38	SDA	I²C Bus Data
39	GNDD	Digital Ground Supply
40	CIN_TV	Chroma Input from TV (SCART1 or external Cinch)

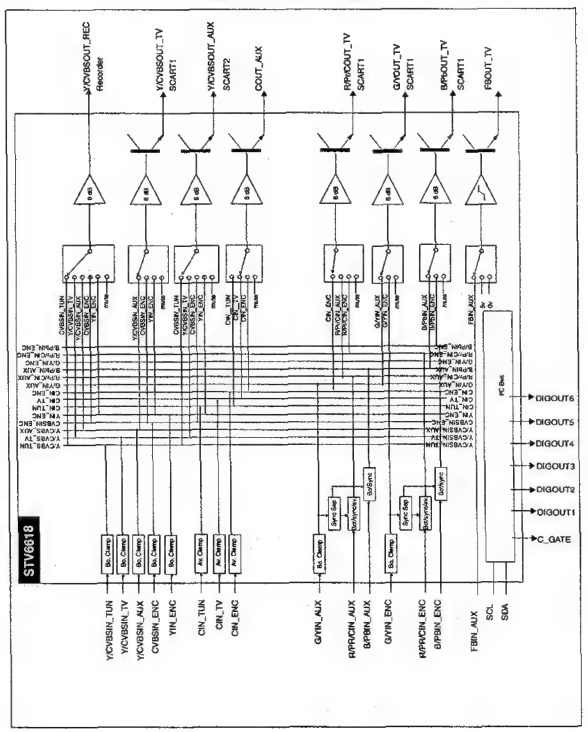
STV6618 GENERAL OVERVIEW

Figure 3: STV6618 Block Diagram



IC7411

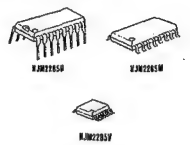
JRC NJM2285

2-INPUT 3CHANNEL VIDEO SWITCH

■ GENERAL DESCRIPTION

NJM2285 is a switching IC for switching over from one audio or video input signal to another. Internalizing 2 inputs, 1 output, and then each set of 3 can be operated independently. Two of them are Clamp type*, and they can be operated while setting DC level fixed in position of the video signal. It is a higher efficiency video switch, featuring the operating supply voltage 5 to 12V, the frequency feature 10MHz, and then the crosstalk 75dB (at 4.43MHz).

■ PACKAGE OUTLINE



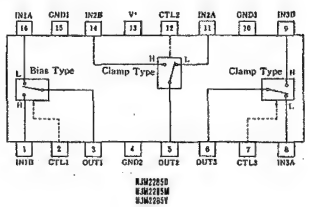
■ FEATURES

- 2 Input-1 Output
  Internalizing 3 Circuits (Two of them are Clamp type).
- Wide Operating Supply Voltage (4.75~13.0V)
- Crosstalk 75dB(at 4.43MHz)
- Wide Bandwidth Frequency Feature 10MHz(2Vp-p Input)
- Package Outline DIP16, DMP16, SSOP16
- Bipolar Technology

■ APPLICATIONS

- VCR, Video Camera, AV-TV, Video Disk Player.

■ BLOCK DIAGRAM



IC7313

GreenChip™II SMPS control IC — TEA1507

FEATURES

Distinctive features

- Universal mains supply operation (70 to 276 V AC)
- High level of integration, giving a very low external component count.

Green features

- Valley/zero voltage switching for minimum switching losses
- Efficient quasi-resonant operation at high power levels
- Frequency reduction at low power standby for improved system efficiency (<3 W)
- Burst mode operation for very low standby levels (<1 W)
- On-chip start-up current source.

Protection features

- Safe restart mode for system fault conditions
- Continuous mode protection by means of demagnetization detection (zero switch-on current)
- Accurate and adjustable overvoltage protection
- Short winding protection
- Undervoltage protection (foldback during overload)
- Overtemperature protection
- Low and adjustable overcurrent protection trip level
- Soft (re)start
- Mains voltage-dependent operation-enabling level.

APPLICATIONS

Besides typical application areas, i.e. TV and Monitor supplies, the device can be used in all applications that demand an efficient and cost-effective solution up to 250 W.

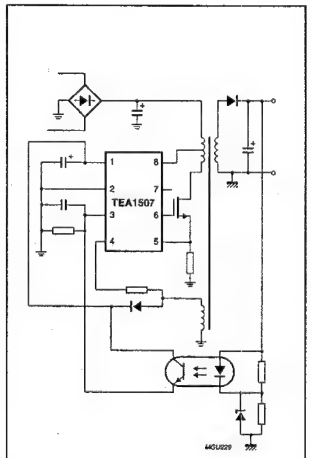


Fig.1 Typical application.

Monolithic Linear IC

SANYO

LA7213

VCR-Use Automatic Channel Selection Peripheral

Overview

The LA7213 is a VCR-use automatic channel selection peripheral IC that contains a sync separator and a vertical sync separator.

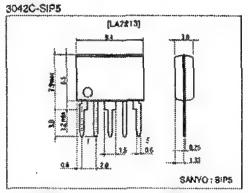
Functions and Features

- Sync separation.
- Vertical sync separation.
- Recommended supply voltage : 5V
- Open collector output (R_L=10k), negative polarity output.

Package Dimensions

unit:mm

3042C-SIP5



Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CC} max		7.0	V
Allowable power dissipation	Pd max	Ta ≤ 75°C	100	mW
Operating temperature	Topr		−15 to +75	°C
Storage temperature	Tstg		−40 to +125	°C

Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		5.0	V
Operating voltage	V_{CC} op		4 to 6	V

NCP300, NCP301

Voltage Detector Series

The NCP300 and NCP301 series are second generation ultra−low current voltage detectors. These devices are specifically designed for use as reset controllers in portable microprocessor based systems where extended battery life is paramount.

Each series features a highly accurate under voltage detector with hysteresis which prevents erratic system reset operation as the comparator threshold is crossed.

The NCP300 series consists of complementary output devices that are available with either an active high or active low reset output. The NCP301 series has an open drain N−channel output with either an active high or active low reset output.

The NCP300 and NCP301 device series are available in the Thin SOT−23−5 package with seven standard under voltage thresholds. Additional thresholds that range from 0.9 V to 4.9 V in 100 mV steps can be manufactured.

Features

- Quiescent Current of 0.5 μA Typical
- High Accuracy Under Voltage Threshold of 2.0%
- Wide Operating Voltage Range of 0.8 V to 10 V
- Complementary or Open Drain Reset Output
- Active Low or Active High Reset Output

Typical Applications

- Microprocessor Reset Controller
- Low Battery Detection
- Power Fail Indicator
- Battery Backup Detection

* The representative block diagrams depict active low reset output 'L' suffix devices. The comparator inputs are interchanged for the active high output 'H' suffix devices.

This device contains 25 active transistors.

Figure 1. Representative Block Diagrams

OPERATING DESCRIPTION

The NCP300 and NCP301 series devices are second generation ultra−low current voltage detectors. Figures 21 and 22 show a timing diagram and a typical application. Initially consider that input voltage V_{in} is at a nominal level and it is greater than the voltage detector upper threshold (V_{DET+}), and the reset output (Pin 1) will be in the high state for active low devices, or in the low state for active high devices. If there is a power interruption and V_{in} becomes significantly deficient, it will fall below the lower detector threshold (V_{DET-}). This sequence of events causes the Reset output to be in the low state for active low devices, or in the high state for active high devices. After completion of the power interruption, V_{in} will again return to its nominal level and become greater than the V_{DET+}. The voltage detector has built−in hysteresis to prevent erratic reset operation as the comparator threshold is crossed.

Although these device series are specifically designed for use as reset controllers in portable microprocessor based systems, they offer a cost−effective solution in numerous applications where precise voltage monitoring is required. Figure 22 through Figure 29 shows various application examples.

9.10.1 IC7100: VSM

VERSATILE STREAM MANAGER

GENERAL DESCRIPTION

The Versatile Stream Manager (VSM) is an ASIC used in the first generation DVD Video Recorder. Main function of the VSM is to interface directly to the different hardware modules such as Basic Engine, MPEG encoders, MPEG decoders and buffering the data streams that are coming from or going to these hardware modules.
The VSM contains a memory interface to support one 4M*16 SDRAM device. A host interface allows a CPU to directly access this memory and the VSM s internal registers.
Handling of data streams is done using scatter / gather DMA s under software control. Hardware support is provided in the VSM to support software MPEG AV multiplexing.

FEATURES

The VSM features include:

- SDRAM memory interface to support one 4 banks*1M*16 (64Mbit) SDRAM device.
- Glueless Host Interface for STM s STi5505.
- Glueless MPEG Decoder interface for STM s STi5505 .
- Glueless interface to Philips SAA6750 MPEG Video Encoder or SAA6752 MPEG AV Encoder.
- Glueless interface to Motorola s DSP56362 used as MPEG Audio Encoder.
- Glueless interface to Philips HDR65 as part of Basic Engine interface including the Sector Processor as also included in the STi5505.
- Audio Clock Control providing PLL loop and clock lock detection.
- Double Extraction of VBI decoded data from extended CCIR 656 stream.
- Double UART with hardware handshake and 8 byte Rx/Tx FIFO.
- Generation of additional Host Bus to support Audio Encoder DSP56362.
- Descriptor based DMA Controllers for data stream handling.
- Hardware support for software MPEG multiplex process.
- Internal Interrupt Controller to handle internal and 4 external interrupt sources.
- Operates from single 27 MHz clock input.
- JTAG for production tests.
- 3.3V logic core.
- 3.3V / 5V toleration IO pins.
- 208 PIN LQFP Package. (CR1087)

BLOCK DIAGRAM

Figure 2.1 shows the block diagram of the VSM. The hardware blocks can be divided in to three categories:

- General modules: Host Interface, Memory Interface, Interrupt Controller.
- DMA Controllers.
- Functional Interfaces; the link between the actual external hardware interface and the DMA Controller. Some Functional Interfaces have knowledge about the stream coming through in order to perform for example MPEG stream characteristics extraction and insertion.

9.10.2 IC7403: SAA6752H (EMPRESS)

MPEG-2 video and MPEG-audio/AC-3 audio encoder with multiplexer

SAA6752HS

1 FEATURES

1.1 Video input and preprocessing

- Digital YUV input according to *"ITU-R BT.656"* (8 bits at 27 MHz) and *"ITU-R BT.601"*
- Support of enhanced *"ITU-R BT.656"* input format containing decoded VBI data readable via I²C-bus; Closed Caption (CC), Wide Screen Signalling (WSS) and copyright information [Copy Generation Management System (CGMS)]
- Processing of non broadcast video signals from analog VCR according to IEC 756
- Two video clock input pins for switching two digital video sources
- *"ITU-R BT.601"* format conversion to 1/2D1, 2/3D1 and Standard Interchange Format (SIF)
- 4 : 2 : 2 to 4 : 2 : 0 colour format conversion
- Decimation filtering for all format conversions
- Adaptive median filter and motion compensated filter for input noise reduction.

1.2 Video compression

- Real time MPEG-2 encoding compliant to Main Profile at Main Level (MP@ML) for 625 and 525 interlaced line systems
- Supported resolutions: D1, 2/3D1, 1/2D1 and SIF
- IPB frame, IP frame and I frame only encoding supported at all modes
- Supported bit rates: up to 25 Mbit/s I-only encoding; up to 15 Mbit/s IP-only or IBP encoding.
- Variable video bit rate mode for constant picture quality and constant bit rate mode to gain optimum picture quality from a fixed channel transfer rate
- Access to bit rate control parameters whilst encoding to support external real-time control algorithms (e.g. constrained variable bit rate control)
- Programmable Group Of Pictures (GOP) structure
- Innovative motion estimation with wide search range
- Adaptive quantization
- Motion compensated noise filter.

1.3 Audio input

- Audio inputs: I²S format or EIAJ format (16, 18 or 20 bits), master or slave mode at 32, 44.1 and 48 kHz
- Two digital I²S input ports for selection between two digital audio sources
- Audio clock generation: 256/384 × f_s (48 kHz) locked to video frame rate (if video is present)
- Sample rate conversion to 48 kHz (locked to video frame rate) for slave mode operation in all modes except Digital Versatile Disc (DVD) compliant bypass.

1.4 Audio compression

- Dolby®(1) Digital Consumer Encoding (DDCE) also known as AC-3(2) 2 channel audio encoding at 256 kbit/s or 384 kbit/s (only for SAA6752HS/01)
- MPEG-1 layer 2 audio encoding at 256 kbit/s or 384 kbit/s
- Input data bypass for Linear Pulse Code Modulation (LPCM) and compressed audio data [MPEG-1, MPEG-2, Dolby® Digital (DD) and Digital Theatre System (DTS)] according to IEC 61937
- Preamble Pc, Preamble Pd and bit stream information captured for identification of modes during bypass of compressed audio data for MPEG-1, MPEG-2, DD and DTS according to IEC 61937
- Audio mute via I²C-bus control for all modes except DVD-compliant bypass.

1.5 Stream multiplexer

- Multiplexing of video and audio streams according to the MPEG-2 systems standard (*"ISO 13818-1"*)
- Generation and output of MPEG-2 Transport Streams (TS), MPEG-2 Program Streams (PS), Packetized Elementary Streams (PES) and Elementary Streams (ES) compliant to the DVD, D-VHS and DVB standards
- MPEG time stamp (PTS/DTS/SCR/PCR) generation and insertion (synchronization)
- Insertion of metadata
- Optional generation of empty time slots for subsequent insertion of application specific data packets
- Optional insertion of user data in the GOP header and in the picture header.

(1) Dolby is a registered trademark of Dolby Laboratories Licensing Corporation.
(2) AC-3 is a registered trademark of Dolby Laboratories Licensing Corporation.

MPEG-2 video and MPEG-audio/AC-3 audio encoder with multiplexer SAA6752HS

1.6 Output Interface

- Parallel interface 8-bit master/slave output
- 3-state output port
- Glueless interfacing with IEEE 1394 chip sets (for example, PDI 1394 L11)
- Data Expansion Bus Interface (DEBI) interface.

1.7 Control domain

- All control done via I²C-bus
- I²C-bus slave transceiver up to 400 kHz
- I²C-bus slave address select pin
- Host interrupt flag pin.

1.8 Other features

- Single external clock or single crystal 27 MHz
- Separate 27 MHz system clock output
- Interface voltage 3.3 V
- TTL compatible digital outputs
- Power supply voltage 3.3 and 2.5 V
- Boundary Scan Test (BST) supported
- Power-down mode
- Single SDRAM system memory (16 Mbit@16 bit or 64 Mbit@16 bit).

2 GENERAL DESCRIPTION

2.1 General

Philips Semiconductors' second generation real time MPEG-2 encoder, the SAA6752HS, is a highly integrated single chip audio and video encoding solution with very flexible multiplexing functionality. With our expertise in two critical areas for consumer video encoding, noise filtering and motion estimation, we have pushed the boundaries for video quality even further, providing enhanced quality for low bit rates and enabling increased recording times for a given storage capacity. The SAA6752HS will also enable a key driver for new consumer digital recording applications; system cost reduction. By integrating all audio encoding and multiplexing functionality we will be moving from a three chip to a one chip system, with cost efficient design and process technology, thus providing a truly low cost, high quality encoding system.

The SAA6752HS/02 is intended for customers whose application does not require the DDCE function.

The SAA6752HS gives significant advantages to customers developing digital recording applications:

- **Fast time-to-market and low development resources:** By adding a simple external video input processor IC, audio analog-to-digital converter, and an external SDRAM, analog video and audio sources are compressed into high quality MPEG-2 video and MPEG-1 layer 2 or AC-3 audio streams, multiplexed into a single program or transport stream for simple connection to various storage media or broadcast media. Hence, making design effort for our customers a minimum, as well as removing the need for in-depth experience in MPEG encoding.
- **Low system host resources:** All video and audio encoding algorithms and software are run on an internal MIPS®(1) processor. The SAA6752HS only requires small amount of communication from system host processor to set up and control required encoding parameters via I²C-bus.

2.2 Application ?elds

2.2.1 DVD BASED OPTICAL DISC RECORDERS (DVD+RW, DVD-RW, DVD-RAM)

Emerging optical disc based recording systems target to replace the existing consumer recording (VCR) and playback (DVD and VCD) products. The first generation recordable DVD based products will want to maximise recording times for the 4.7 Gbyte storage capacity. For these systems the SAA6752HS is critical, with its superior noise filtering and motion estimation, in enabling high quality at low bit rates.

Playback compatibility with existing DVD decoding solutions will also be important, which is why the SAA6752HS provides Dolby® digital consumer (AC-3) audio encoding to allow playback through existing players implementing DDCE (AC-3) decoding dominant in current DVD platforms.

The DVD stream is based on MPEG Program Stream (PS). The SAA6752HS directly outputs MPEG PS compliant to the DVD standard.

(1) MIPS is a registered trademark of MIPS Technologies.

2.2.2 HDD BASED TIME SHIFT RECORDING

Hard Disc Drive (HDD) based time-shift systems enable Personalized TV (PTV) funcitonality, providing consumers with new powers of control over what and when to watch broadcast content. With the audio and video content recorded digitally, identification, search and retrieval becomes a 'no brainer' task as compared to traditional VCR functionality. Combine this with electronic program guides and intelligent control, and the PTV can also analyse the viewers watching habits to search for programs likely to be of interest and automatically recorded in anticipation of the viewers preferences.

Since HDD recorders are closed systems, the recording format stream can be proprietary. SAA6752HS flexible multiplexing formats, support a number of recording stream formats for HDD including MPEG Transport Stream (TS) or MPEG Packetized Elementary Stream (PES).

2.2.3 DIGITAL VCR (DVHS) RECORDING

A DVHS player records streams based on MPEG Transport Streams (TS) packed in logical tape tracks. The SAA6752HS output streams are compliant with DVHS standard requirements.

2.2.4 VIDEO EDITING/TRANSMISSION/SURVEILLANCE/ CONFERENCING

The SAA6752HS can operate as a stand-alone device in all above applications. The SAA6752HS' full features and flexibility allows customers to tailor functionality and performance to specific application requirements. All required control settings such as GOP size and bit rate modes can be selected via I²C-bus.

3 QUICK REFERENCE DATA

SYMBOL	PARAMETER	MIN.	TYP.	MAX.	UNIT
V_{DDP}	digital supply voltage (pad cells)	3.0	3.3	3.6	V

EXTCLK	123	input	–	27 MHz external clock input with internal pull-up resistor
V_{SSP}	124	ground	–	pad ground
V_{SSA}	125	ground	–	oscillator analog ground
XTALI	126	analog input	–	crystal oscillator input (27 MHz); note 2
XTALO	127	analog output	–	crystal oscillator output (27 MHz)
V_{DDA}	128	supply	–	oscillator analog supply voltage (2.5 V)
V_{SSCO}	129	ground	–	core ground
V_{SSCO}	130	ground	–	core ground
V_{DDCO}	131	supply	–	core supply voltage (2.5 V)
V_{DDCO}	132	supply	–	core supply voltage (2.5 V)
V_{DDP}	133	supply	–	pad ring supply voltage (3.3 V)
TDI	134	input	–	boundary scan test data input; pin must ?oat or set to HIGH during normal operating; with internal pull-up resistor; note 3
TMS	135	input	–	boundary scan test mode select; pin must ?oat or set to HIGH during normal operating; with internal pull-up resistor; note 3
TCK	136	input	–	boundary scan test clock; pin must be set to LOW during normal operating; with internal pull-up resistor; note 3
TDO	137	3-state output	4	boundary scan test data output; pin not active during normal operating; with 3-state output; note 3
V_{SSP}	138	ground	–	pad ground
$\overline{TRST}$	139	input	–	test reset input (active LOW), for boundary scan test (with internal pull-up); notes 3 and 4
CLKOUT	140	output	4	27 MHz system clock output
TEST0	141	input/output	4	reserved (do not connect)
TEST1	142	input/output	4	reserved (do not connect)
V_{DDP}	143	supply	–	pad ring supply voltage (3.3 V)
TEST2	144	input/output	4	reserved (do not connect)
SDA	145	input/open-drain output	–	serial data input/output (I^2C-bus)
SCL	146	input/open-drain output	–	serial clock input/output (I^2C-bus)
$\overline{RESET}$	147	input	–	reset input (active LOW); with internal pull-up resistor
V_{SSP}	148	ground	–	pad ground
$\overline{RTS}$	149	output	4	reserved (do not connect); Universal Asynchronous Receiver/Transmitter (UART) request to send output (active LOW)

SYMBOL	PIN	INPUT/OUTPUT[1]	I_{max} (mA)	DESCRIPTION
$\overline{CTS}$	150	input	–	reserved (recommended connect to pin V_{DDP}); UART clear to send input; external static memory select input (active LOW); with internal pull-up resistor
RXD	151	input	–	reserved (recommended connect to pin V_{DDP}); UART receive data; internal boot select input; with internal pull-up resistor
TXD	152	output	4	reserved (do not connect); UART transmit data
V_{DDP}	153	supply	–	pad ring supply voltage (3.3 V)
$\overline{SM\_LB}$	154	input/output	4	reserved (do not connect)
$\overline{SM\_UB}$	155	input/output	4	reserved (do not connect)
H_IRF	156	3-state output	4	host interrupt ?ag output; with internal pull-up resistor
V_{SSP}	157	ground	–	pad ground
$\overline{SM\_OE}$	158	output	4	reserved (do not connect), static memory output enable output (active LOW)
SM_A9	159	output	4	reserved (do not connect), static memory address output bit 9
SM_A10	160	output	4	reserved (do not connect), static memory address output bit 10
V_{DDP}	161	supply	–	pad ring supply voltage (3.3 V)
SM_A8	162	output	4	reserved (do not connect), static memory address output bit 8
SM_A11	163	output	4	reserved (do not connect), static memory address output bit 11
SM_A7	164	output	4	reserved (do not connect), static memory address output bit 7
SM_A12	165	output	4	reserved (do not connect), static memory address output bit 12
V_{SSP}	166	ground	–	pad ground
SM_A6	167	output	4	reserved (do not connect), static memory address output bit 6
SM_A13	168	output	4	reserved (do not connect), static memory address output bit 13
SM_A5	169	output	4	reserved (do not connect), static memory address output bit 5
SM_A14	170	output	4	reserved (do not connect), static memory address output bit 14
V_{DDP}	171	supply	–	pad ring supply voltage (3.3 V)
$\overline{SM\_WE}$	172	output	4	reserved (do not connect), static memory write enable output (active LOW)
SM_D7	173	input/output	4	reserved (do not connect), static memory data input/output bit 7 with internal pull-down resistor
SM_D8	174	input/output	4	reserved (do not connect), static memory data input/output bit 8 with internal pull-down resistor
SM_D6	175	input/output	4	reserved (do not connect), static memory data input/output bit 6 with internal pull-down resistor
V_{SSP}	176	ground	–	pad ground
SM_D9	177	input/output	4	reserved (do not connect), static memory data input/output bit 9 with internal pull-down resistor
SM_D5	178	input/output	4	reserved (do not connect), static memory data input/output bit 5 with internal pull-down resistor
SM_D10	179	input/output	4	reserved (do not connect), static memory data input/output bit 10 with internal pull-down resistor

MPEG-2 video and MPEG-audio/AC-3 audio encoder with multiplexer SAA6752HS

SYMBOL	PIN	INPUT/OUTPUT[1]	I_{max} (mA)	DESCRIPTION
SM_D4	180	input/output	4	reserved (do not connect), static memory data input/output bit 4 with internal pull-down resistor
V_{SSCO}	181	ground	–	internal pre-driver and substrate ground
V_{SSCO}	182	ground	–	core ground
V_{DDCO}	183	supply	–	core supply voltage (2.5 V)
V_{DDCO}	184	supply	–	internal pre-driver supply voltage (2.5 V)
V_{DDP}	185	supply	–	pad ring supply voltage (3.3 V)
SM_D11	186	input/output	4	reserved (do not connect), static memory data input/output bit 11 with internal pull-down resistor
SM_D3	187	input/output	4	reserved (do not connect), static memory data input/output bit 3 with internal pull-down resistor
SM_D12	188	input/output	4	reserved (do not connect), static memory data input/output bit 12 with internal pull-down resistor
SM_D2	189	input/output	4	reserved (do not connect), static memory data input/output bit 2 with internal pull-down resistor
V_{SSP}	190	ground	–	pad ground
SM_D13	191	input/output	4	reserved (do not connect), static memory data input/output bit 13 with internal pull-down resistor
SM_D1	192	input/output	4	reserved (do not connect), static memory data input/output bit 1 with internal pull-down resistor
SM_D14	193	input/output	4	reserved (do not connect), static memory data input/output bit 14 with internal pull-down resistor
SM_D0	194	input/output	4	reserved (do not connect), static memory data input/output bit 0 (LSB) with internal pull-down resistor
V_{DDP}	195	supply	–	pad ring supply voltage (3.3 V)
SM_D15	196	input/output	4	reserved (do not connect), static memory data input/output bit 15 (MSB) with internal pull-down resistor
$\overline{SM\_CS3}$	197	output	4	reserved (do not connect), static memory chip select output for external ROM or RAM (active LOW)
SM_A4	198	output	4	reserved (do not connect), static memory address output bit 4
SM_A3	199	output	4	reserved (do not connect), static memory address output bit 3
V_{SSP}	200	ground	–	pad ground
SM_A2	201	output	4	reserved (do not connect), static memory address output bit 2
SM_A15	202	output	4	reserved (do not connect), static memory address output bit 15
SM_A1	203	output	4	reserved (do not connect), static memory address output bit 1
SM_A16	204	output	4	reserved (do not connect), static memory address output bit 16
V_{DDP}	205	supply	–	pad ring supply voltage (3.3 V)
SM_A0	206	output	4	reserved (do not connect), static memory address output bit 0 (LSB)
SM_A17	207	output	4	reserved (do not connect), static memory address output bit 17 (MSB)
$\overline{SM\_CS0}$	208	output	4	reserved (do not connect)

IC7700:FLI2200

FLI2200

Description

The FLI2200 is a single chip implementation of Faroudja Laboratories' award winning deinterlacing and post-processing algorithms that produce the highest quality progressive video output from a variety of interlaced video inputs including 525/60 (NTSC) or 625/50 (PAL or SECAM). It uses patented and patent pending motion-adaptive deinterlacing that selects the optimal filtering on a per-pixel basis. This includes detection and proper interleaving of 3:2 and 2:2 pulldown for film-base sources, including continuous monitoring and compensation for bad edits that occur frequently in broadcast material due to poor scene cuts or insertion of commercials. Video material is processed by a set of content-sensitive spatio-temporal filters that adapt to the appropriate direction for smoothest interpolation using the patented Faroudja DCDi™ algorithm. The FLI2200 also includes motion-adaptive cross-color suppression that removes highly objectionable coloration artifacts produced by commonly used video decoders. Its internal processing uses 10 bits per channel to maintain the highest quality. Its inputs and outputs are 10 bits/channel for best quality but also supports 8 bits/channel for more cost-sensitive applications. The FLI2200 requires 4 MB of low cost SDRAM for best quality deinterlacing, but it can also be operated in an optimized intra-field mode without memory for more cost-sensitive applications. This makes possible the use of a single design for both high-end and low-end applications.

The FLI2200 integrates a number of functions to provide maximum flexibility in a low cost configuration. This includes an on-chip clock generator, SDRAM controller, display controller, input and output color-space converters. It uses a standard 2-wire serial control interface for easy control and access to the registers.

The FLI2200 can be connected without glue logic to the FLI2000 video decoder and FLI2220 Enhancer and OSD Generator to produce the highest quality video pipeline for premium applications. It is also fully compatible with other decoders having a ITU-R BT 656 output format.

Applications

Flat panel TV – LCD, PDP

Progressive scan TVs

Multimedia front/rear projectors

Home Theater

Scan Converters

Multimedia PCs/Workstations

DCDi™ is a Faroudja trademark

Features

Motion-adaptive cross-color suppression removes artifacts produced by improper Y/C separation in low-cost video decoders

Motion-adaptive video deinterlacing selects optimal filtering on a per-pixel basis

- Film-mode for proper handling of 3:2 and 2:2 pulldown material
- Bad-edit detection/correction compensates for poor scene cuts and insertions common in broadcast material
- Motion-weighted interpolation for video sources produces maximum resolution without introducing motion artifacts
- Directional Correlational Deinterlacing (DCDi™) minimizes jaggies on angled lines

8/10-bit Y/Cb/Cr (D1) (ITU-R BT 656), 16/20-bit Y Cb/Cr (ITU-R BT 601), 24/30-bit RGB or YCbCr/YPbPr interlaced input options

- Supports 525/60 (NTSC), 625/50 (PAL/SECAM)
- Accepts up to 1100 pixels/line

8/10-bit, 16/20-bit YUV, 24/30-bit RGB or YCbCr/YPbPr progressive output options

Supports 8- or 10-bit inputs and outputs

10-bit internal processing for highest quality

Includes color-space converters at input and output for maximum flexibility

Auto-detection of NTSC/PAL/SECAM inputs

High-order filtering produces smooth chroma output in 4:2:2 to 4:4:4 or 4:4:4 to 4:2:2 conversions

Resolution recovery maximizes output signal-to-noise ratio and dynamic range

Can be operated without glue logic with FLI2000 Video Decoder and FLI2220 Enhancer and OSD Generator ICs to produce highest quality video pipeline

Glue-less interface to most standard video decoders

Built-in display timing generator

On-chip clock generator eliminates external PLLs

On-chip SDRAM controller

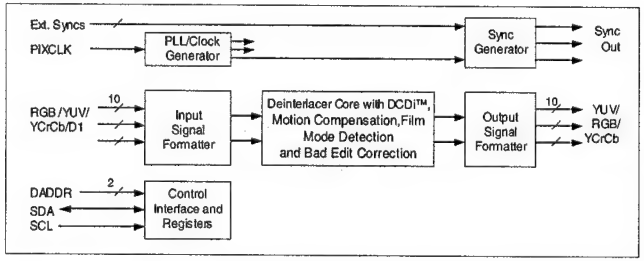
Uses low cost SDRAM as field memory – 4 MB

Optimized intra-field operation allows memory-less configuration for lowest cost applications with same design and layout as for high-end applications

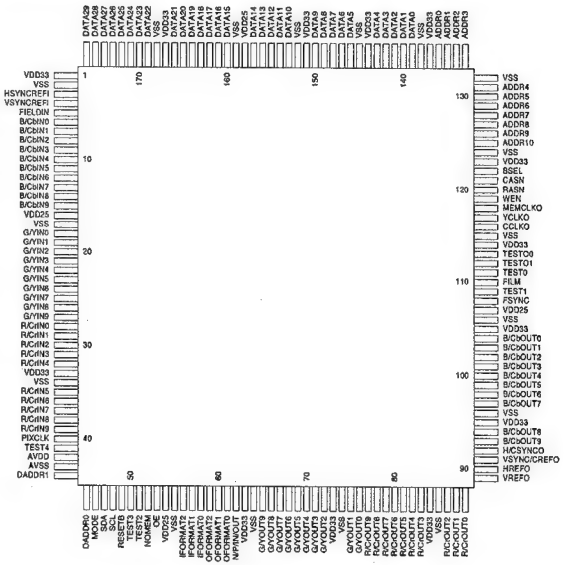
2-wire serial control interface for easy control

176-pin TQFP package

Simplified Block Diagram



Pin description



Pin #	Name	Description
52	NOMEM	No Memory Mode control input. This pin controls the operation of the FLI2200 as follows: When this pin is set low the device is used with external field memories and operates in the full set of deinterlacing modes, i.e., motion adaptive video deinterlacing and full frame film source deinterlacing using 3:2 pulldown detection (2:2 pulldown for 625/50 sources). When this pin is set high the FLI2200 is forced into the intra-field only deinterlacing mode, which requires no external memories, allowing the FLI2200 to be used in low-cost applications where the ultimate video quality is not a requirement. ***To ensure proper startup of the SDRAMs this pin should be set high during the power-up sequence.*** This can be overridden by the NMOvr bit, bit 1 in register 05_H, allowing this function to be set or changed via the I²C bus. Please refer to the description of register 05_H for details.
27-18	G/YIN_{9-0}	10-bit green or luminance signal input bus. The mode is set by the $IFORMAT_{2-0}$ pins. This can be overridden by the IFmtOvr bit, bit 3 in register 00_H, allowing this function to be set or changed via the I²C bus. Please refer to the description of register 00_H for details. This signal is sampled on the rising edge of PIXCLK.
15-6	$B/CbIN_{9-0}$	10-bit blue or Cb chroma signal input bus. The mode is set by the $IFORMAT_{2-0}$ pins. This can be overridden by the IFmtOvr bit, bit 3 in register 00_H, allowing this function to be set or changed via the I²C bus. Please refer to the description of register 00_H for details. Bits 6, 4 and 3 in register 08_H specify the busses used in the multiplexed modes. In all cases the signals are sampled on the rising edges of PIXCLK. In the Y Cb Cr and Y Pb Pr modes the Cb or Pb signal is sampled on alternate rising edges of PIXCLK in 4:2:2 mode. The frequency of PIXCLK will be 27 MHz in the multiplexed Y/Cb/Cr mode and 13.5 MHz in all other modes. These pins should be tied low when not used.
39-35 32-28	$R/CrIN_{9-0}$	10-bit red or Cr chroma signal input bus. The mode is set by the $IFORMAT_{2-0}$ pins. This can be overridden by the IFmtOvr bit, bit 3 in register 00_H, allowing this function to be set or changed via the I²C bus. Please refer to the description of register 00_H for details. Bits 6, 4 and 3 in register 08_H specify the busses used in the multiplexed modes. In all cases the signals are sampled on the rising edges of PIXCLK. In the Y Cb Cr mode the Cr signal is sampled on alternate rising edges of PIXCLK in 4:2:2 mode. The frequency of PIXCLK will be 27 MHz in the multiplexed Y/Cb/Cr mode and 13.5 MHz in all other modes. These pins should be tied low when not used.
3	HSYNCREFI	Horizontal sync or reference. The horizontal sync or reference of the input signal should be connected to this pin. The function is programmed with bit 4 in register 00_H. The polarity and position of the sync or reference pulse relative to the start of active video are both programmable within a small range. When the FLI2200 is used in the ITU-R BT 601/D1 input mode with embedded syncs (IFormat = 110) this input is not used and should be tied low; in this case all sync information will be derived from the signal.
4	VSYNCREFI	Vertical sync or reference. The vertical sync or reference of the input signal should be connected to this pin. The function is programmed with bit 4 in register 00_H. The polarity and position of the sync or reference pulse relative to the start of active video are both programmable within a small range. When the FLI2200 is used in the ITU-R BT 601/D1 input mode with embedded syncs (IFormat = 110) this input is not used and should be tied low; in this case all sync information will be derived from the signal.
5	FLDIN	Field identifier input. The field identifier output of the source signal should be connected to this pin. A low setting signifies an even field and a high level signifies an odd field. When bit 4 in register 00_H is set low, the input timing is based on HREF and VREF and this signal is required. When this bit is set high the input timing is based on HSYNC and VSYNC and this signal is generated internally and is not required. When bit 5 in register 06 is set high this signal is also used as the frame boundary identifier for 30 Hz film sources.

Pin Connections and Functions

Pin #	Name	Description
See list	V_{SS}	Ground connections. Connect to the digital ground plane. Pins: 2, 17, 34, 55, 64, 74, 85, 96, 106, 115, 124, 132, 138, 145, 152, 159, 168
See list	V_{DD33}	Pad Ring digital power connections. Connect to the digital 3.3 volt power supply and decouple to the digital ground plane. Pins: 1, 33, 63, 73, 84, 95, 105, 114, 123, 137, 144, 151, 167
See list	V_{DD25}	Core Logic digital power connections. Connect to the digital 2.5 volt power supply and decouple to the digital ground plane. Pins: 16, 54, 107, 158
43	AV_{SS}	Ground connection for the clock PLL circuits. Connect to the digital ground plane
42	AV_{DD}	Analog power connections for the clock PLL circuit. Connect to a separately decoupled 2.5 volt power supply and decouple directly to the AV_{SS} pin..
49	RESETB	Reset. When this input is set low it will reset all the internal registers to the default states. Refer to the section on the control registers for details of these states. The device must be reset after it is powered-up.
53	OE	When this pin is set high the outputs of the FLI2200 will be enabled; when it is set low the outputs will be set into a high-impedance state.
56-58	$IFORMAT_{2-0}$	Input signal format control. The settings of these pins set the format of the input signal. This can be overridden by the IFmtOvr bit, bit 3 in register 00_H, allowing this function to be set or changed via the I^2C bus. Please refer to the description of register 00_H for details.
59-61	$OFORMAT_{2-0}$	Output signal format control. The settings of these pins set the format of the output signal. This can be overridden by the OFmtOvr bit, bit 3 in register 07_H, allowing this function to be set or changed via the I^2C bus. Please refer to the description of register 07_H for details.
44-45	$DADDR_{1-0}$	The settings of $DADDR_{1-0}$ allow the device address of the control bus to be programmed to prevent conflict with the other devices connected to the bus. $DADDR_{1-0}$ allow the device address to be set to any of the following values: $C0/C1_H$, $C2/C3_H$, $E0/E1_H$, $E2/E3_H$. Please refer to the section "Control Bus Operation and Protocol" for further information.
46	MODE	When this pin is set low the control bus will operate in the slave mode; allowing the device to programmed from an external controller. When it is set high the FLI2200 will self-program from an external I^2C memory connected to the bus. Please refer to the "Control Bus Operation and Control Protocol" section for more details.
47	SDA	2-wire serial control bus data. Data can be written to the control registers via this pin when it is in the input mode and data can be read from the status registers when it is in the output mode. Refer to the section on the serial port for timing and format details and to the section on the registers for programming information.
48	SCL	2-wire serial control bus clock. When the control port operates in slave mode this pin will be an input and when it operates in the self programming mode it will be an output.
40	PIXCLK	Pixel clock input. This clock is used to drive all the circuits in the FLI2200. An internal PLL is used to upconvert this clock to provide the master clock signal and other clocks used internally. Note that when the FLI2200 is used in the D1 input mode the PIXCLK input should run at the rate of two cycles per pixel (one for luma and one for chroma).
62	N/P/IN/OUT	NTSC/PAL input or output. The default function of this pin is NTSC/PAL signal indicator output. When the input video signal is a 525 line signal this pin will be set high and when it is a 625 line signal the pin is set low. This function of this pin can be programmed to be an input according to the setting of this pin if the $NPOp_{1-0}$ bits, bits 5-4 in register 03_H, are set to 00_H, overriding the internal line counter. I.e., it will treat the signal as a 525 line signal when it is set high and a 625 line signal when it is set low.

Pin #	Name	Description
65-72 75-76	$G/YOUT_{9-0}$	Green or luminance output bus. In the RGB mode this output is the Green signal and in the YCbCr mode it is the Y signal. The mode is set by the $OFORMAT_{2-0}$ pins. This can be overridden by the OFmtOvr bit, bit 3 in register 07_H, allowing this function to be set or changed via the I^2C bus. Please refer to the description of register 07_H for details. The signal is clocked out on the falling edge of YCLKO.
93-94 97-104	$B/CbOUT_{9-0}$	Blue or Cb chrominance output bus. In the RGB mode this output is the Blue signal, in the Y Cb Cr mode it is the Cb signal. The mode is set by the $OFORMAT_{2-0}$ pins. This can be overridden by the OFmtOvr bit, bit 3 in register 07_H, allowing this function to be set or changed via the I^2C bus. Please refer to the description of register 07_H for details. The busses used in the multiplexed modes are set by means of bit 5 in register 08_H. The signal is clocked out on the falling edge of YCLKO in the RGB and YUV 4:4:4 modes, on the falling edge of YCLKO prior to the next rising edge of CCLKO in the YUV 4:2:2 mode, and on the rising edge of MEMCLKO in the multiplexed YCbCr (pseudo D1) mode.
77-83 86-88	$R/CrOUT_{9-0}$	Red or Cr chrominance output bus. In the RGB mode this output is the Red signal, in the YCbCr mode it is the Cr signal. The mode is set by the $OFORMAT_{2-0}$ pins. This can be overridden by the OFmtOvr bit, bit 3 in register 07_H, allowing this function to be set or changed via the I^2C bus. Please refer to the description of register 07_H for details. The busses used in the multiplexed modes are set by means of bit 5 in register 08_H. The signal is clocked out on the falling edge of YCLKO in the RGB and YUV 4:4:4 modes, on the falling edge of YCLKO prior to the next rising edge of CCLKO in the YUV 4:2:2 mode, and on the rising edge of MEMCLKO in the multiplexed YCbCr (pseudo D1) mode.
116	CCLKO	Chroma output sampling clock. This clock is derived from PIXCLK and will be at half the frequency of YCLKO. In 30-bit 4:2:2 output mode the chroma output signals will change on the falling edge of YCLKO prior to the next rising edge this clock.
117	YCLKO	Luma output sampling clock. This clock is derived from PIXCLK and is double the frequency of PIXCLK. In 30-bit and 20-bit output modes the output signals will change on the falling edge of this clock.
89	VREFO	Start of active field or frame indicator. This signal goes high to indicate the first active line in each field or frame and goes low during the vertical blanking interval. The polarity and timing of this signal are programmable.
90	HREFO	Start of active line indicator output. This signal goes high to indicate the first active pixel in each line and goes low during the horizontal blanking interval. The polarity and timing of this signal are programmable.
91	VSYNC/ CREFO	Vertical sync output. This signal provides the vertical sync function for the outputs. Its polarity is programmable to be active high or active low. It can also be programmed to be a composite reference for applications requiring this instead of sync.
92	H/CSYNCO	Horizontal or composite sync output. This signal provides the horizontal sync function for the outputs. Its polarity is programmable to be active high or active low. This signal can also be programmed to be the composite sync output, CSYNC.
108	FSYNC	Film mode sync output. When film mode is detected this pin will toggle in sync with the 3:2 (NTSC) or 2:2 (PAL and 30 Hz film in NTSC) pulldown sequence detected in the source.
110	FILM	Film mode detector output. This pin will be set high when the FLI2200 detects that the video input was converted from 24 fps film with a telecine machine. If film mode is not detected this pin will be set low.

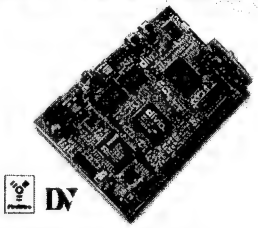
Pin #	Name	Description
125-131 133-136	$ADDR_{10-0}$	SDRAM Address bus. This signal bus is used to address the external SDRAM(s) used for field memories. It should be connected to the A_{10-0} bus of the memory chip(s). Please refer to the Applications section of this data sheet for further details.
176-169 166-160 157-153 150-146 143-139	$DATA_{29-0}$	SDRAM Data bus. This signal bus is used to transfer the data to and from the external SDRAM(s) used for field memories. It should be connected to the DQ_{29-0} bus of the memory chip when using a 64 Mbit SDRAM. When using two 16 Mbit SDRAMs this 30-bit bus may be connected to the two 16-bit data busses of the memories in two ways: either connect 16 lines to one chip and 14 to the other, or connect 15 to both. In all cases the two unused data lines on the memory chip(s) should be connected to ground via 22 k? resistors. Please refer to the Applications section of this data sheet for further details.
118	MEMCLKO	SDRAM clock and 2x output sampling clock. This clock is derived from PIXCLK and will be at double the frequency of YCLKO. This active signal should be connected to the CLK pin(s) on the SDRAM(s). When the 10-bit output mode selected the output signals will also change at this clock rate and this should then be used as the output clock..
119	WEN	SDRAM Write Enable. This active low signal should be connected to the WE pin(s) on the SDRAM(s).
120	RASN	SDRAM Row Address Select. This active low signal should be connected to the RAS pin(s) on the SDRAM(s).
121	CASN	SDRAM Column Address Select. This active low signal should be connected to the CAS pin(s) on the SDRAM(s).
122	BSEL	SDRAM Bank Select. When using two 16 Mbit SDRAMs this signal should be connected to the BA (also called BS or A_{11}) pin on both SDRAMs. When using a 64 Mbit SDRAM this signal should be connected to the BA0 (also called BS0 or A_{11}) pin on the SDRAM and BA1/ BS1 (also called BA when BA0 is referred to as A_{11}) should be tied low.
41, 50, 51, 109, 111	$TEST_{4-0}$	These pins are used for test purposes only and should always be tied low for normal operation.
112, 113	$TESTO_{1-0}$	These pins are test outputs and should be left unconnected in normal operation.

9.11 IC's Divio Board

9.11.1 IC7404: NW700

divio

NW700
DV Decoder
Daytona Beach
Reference Solution



DV

NW700 DV Decoder Daytona Beach Reference Solution

divio introduces the NW700, the world's first single-chip DV decoder. Fully DV-SD compliant and designed with divio's patented pending compression technology, the NW700 delivers unrivaled video quality, performance and compatibility. With a single-chip design and gluelest interface to standard video components, divio's single chip DV decoder will replace current multi-chip solution and enable a new generation of cost-effective digital video consumer products.

divio has created the "Daytona Beach" reference solution that includes the NW700, Philips Semiconductor's PDI1394L4X audio/video 1394 LINK layer controller and PDI1394P11A 200 Mbit/sec PHY. divio provides a complete easy to integrate DV/IEEE1394 solution to OEMs to reduce time-to-market and development costs.

The NW700 provides an unprecedented feature-set that deliver real-time DV decoding functions to empower the next generation of consumer electronics devices.

Features and Benefits

Enhanced Feature set
- Fully DV-SD Compliant
- Automatic Audio and AUX Code Processing
- Pin compatible with NW701 (DV CODEC)

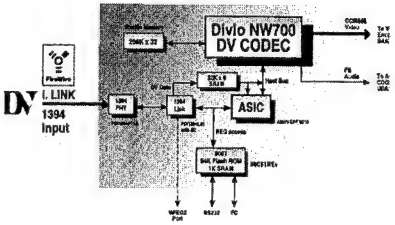
Low System Cost
- Integrated single-chip design including AV processing and video decoding
- Glue-less interface to Video Encoder (SAA7121), Audio Encoder (UDA1340), Micro-controller, and memory
- Integrated shuffle memory logic
- Requires only one 256K x 32 EDO DRAM

Real-time Performance
- High speed (33Mbytes/s throughput)
- 54MHz double clock speed for dual stream applications

Video and Audio Support
- CCIR656 Video output and I²S Audio output
- Support NTSC and PAL
- Selectable Audio channel (A/B or C/D)
- 48, 44.1, and 32KHz (12- and 16-bit) audio support

Simple Host Bus connectivity
- 8 or 16-bit asynchronous host bus interface
- built-in 512 byte DV FIFO
- Three interrupt pins for enhanced system control

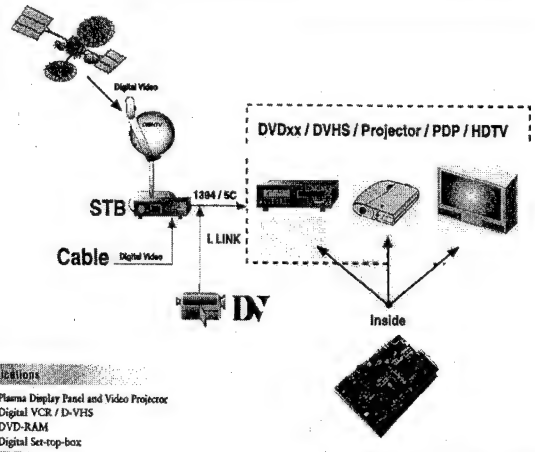
DAYTONA BEACH DV Decode Module



A P P L I C A T I O N S

NW700

DV Decoder
Daytona Beach
Reference Solution



Applications

Plasma Display Panel and Video Projector
Digital VCR / D-VHS
DVD-RAM
Digital Set-top-box
HDTV

Daytona Beach Reference Kit

Board Components

- divio NW700 - DV Decoder
- 8051 µC (P89C51RD2)
- 100p FPGA/32k x 8 SRAM
- IEEE1394 LINK (PDI1394L4X)
- IEEE1394 PHY (PDI1394P11A)
- 256 x 32 EDO Memory

Manufacturing Kit Contents

- Daytona Beach Reference Design
- Schematics, Gerber Files and BOM
- Technical Documents and Manuals
- FPGA and Firmware Source Code

Ordering Information

Part Number	*Description*
• NW700LQ	DV Decoder

9.12 List of Abbreviations

Digital Board

+12V
+12V Power Supply
+2V5_FLI
+2V5 Power Supply for FLI
+2V5_PLL
+2V5 Power Supply for PLL
+3V3
+3V3 Power Supply
+3V3_ANA
+3V3 Power Supply Analogue
+3V3_DD
+3V3 Power Supply Digital
+3V3_FLI
+3V3 Power Supply for FLI
+5V
+5V Power Supply
+5V_BUFFER
+5V Power Supply for Video Filters
5508_HS
Horizontal Synchronisation from Host Decoder to Progressive Scan
5508_ODD_EVEN
Odd - Even control from Host Decoder to Progressive Scan
-5V
-5V Power Supply
-5V_BUFFER
-5V Power Supply for Video Filters
A_EMPRESS(13:0)
EMPRESS address output to SDRAM
ACC_ACLK_OSC
Audio Clock PLL output sync with incoming video for record
ACC_ACLK_PLL
Audio Clock PLL output for play back
ACLK_EMP
EMPRESS audio clock output
AD_ACLK
Audio Decoder Clock
AD_BCLK
Audio Decoder I2S bit clock
AD_DATAO
Audio Decoder Output data (PCM)
AD_SPDIF33
Audio digital output to the analog board
AD_WCLK
Audio Decoder I2S word clock
AE_ACLK
Audio Encoder Clock
AE_ACLK_OEN
Audio Encoder Clock Output Enable
AE_BCLK
Audio Encoder I2S bit clock
AE_BCLK_DV
Audio Encoder I2S bit clock to DVIO
AE_BCLK_VSM
Audio Encoder I2S bit clock to VSM
AE_DATAI
Audio Encoder Input data (PCM)
AE_DATAI_DV
Audio Encoder Input data (PCM) from DVIO
AE_DATAO
Audio Encoder Output data (PCM)
AE_WCLK
Audio Encoder I2S word clock
AE_WCLK_DV
Audio Encoder I2S word clock to DVIO
AE_WCLK_VSM
Audio Encoder I2S word clock to VSM
ANA_WE
Analogue write enable
ANA_WE_LV
Analogue write enable Low Voltage
B_IN_VIP
Video blue input to Video Input Processor
B_OUT
Video blue output from Host Decoder
B_OUT_B
Filtered blue video output
BA
Bank Address
BCLK_CTL_SERVICE
Bitclock control Service Interface
BE_BCLK
Basic Engine I2S bit clock
BE_BCLK_VSM
Basic Engine I2S bit clock to VSM
BE_CPR
Basic Engine Control Processor ready to accept data
BE_DATA_RD
Basic Engine Data read
BE_DATA_WR
Basic Engine Data write
BE_FAN
Basic Engine FAN
BE_FLAG
Basic Engine error flag
BE_IRQN
Basic Engine interrupt request
BE_LOADN
Basic Engine LOAD(LOW active)
BE_RXD
Basic Engine S2B received data
BE_SUR
Basic Engine servo unit ready to accept data (S2B)
BE_SYNC
Basic Engine sector/abs time sync
BE_TXD
Basic Engine S2B transmitted data
BE_V4
Basic Engine versatile input pin
BE_WCLK
Basic Engine I2S word clock
C_IN
Video Chrominance input
C_IN_VIP
Chrominance input to Video Input Processor
C_OUT
Chrominance output from Host Decoder
C_OUT_B
Filtered Chrominance output
CAS
Column Address strobe
CB_OUT(9:0)
Chrominance Blue out
CLK4
SDRAM clock
CPUINT0
Control processor unit interrupt
CPUINT1
Control processor unit interrupt
CR_OUT(9:0)
Chrominance Red out
CTS1P
Clear to send (Service Interface)
CVBS_OUT
Composite video output out of the Host Decoder
CVBS_OUT_B
Filtered Composite video output
CVBS_OUT_B_VIP
Composite video output to Video Input Processor(digital board video loop)
CVBS_Y_IN
Composite video/Luminance input
CVBS_Y_IN_A
Composite video/Luminance input to Video Input Processor
CVBS_Y_IN_B

Composite video/Luminance input to Video Input Processor
CVBS_Y_IN_C
Composite video/Luminance input to Video Input Processor
D_ADDR(10:0)
Address bus
D_DATA(29:0)
Data bus
D_EMPRESS(15:0)
SDRAM data input/output of EMPRESS
D_PAR_D(7:0)
Front-end parallel interface data (record)
D_PAR_DVALID
Front-end parallel interface data valid
D_PAR_REQ
Front-end parallel interface request
D_PAR_STR
Front-end parallel interface strobe
D_PAR_SYNC
Front-end parallel interface sync
DV_IN_CLK
Digital Video in clock from DVIO board
DV_IN_DATA(7:0)
Digital Video in data bus from DVIO board
DV_IN_HS
Digital Video in horizontal synchronisation from DVIO board
DV_IN_VS
Digital Video in vertical synchronisation from DVIO board
EMI_A(21:1)
External Memory Interface Address Bus(Host Decoder)
EMI_BE0N
External Memory Interface Lower byte enable(Host Decoder)
EMI_BE1N
External Memory Interface Upper byte enable(Host Decoder)
EMI_CAS0N
External Memory Interface SDRAM column address strobe(Host Decoder)
EMI_CE1N
External Memory Interface VSM Lower bank enable
EMI_CE2N
External Memory Interface VSM Higher bank enable
EMI_CE3N
External Memory Interface flash IC's enable
EMI_D(15:0)
External Memory Interface Data Bus(Host Decoder)
EMI_PROCCLK
External Memory Interface Processor Clock(Host Decoder)
EMI_RWN
External Memory Interface Read/Write control signal(Host Decoder)
EMI_WAIT
External Memory Interface Wait state request(Host Decoder)
EMPRESS_BOOT
EMPRESS BOOT select input
EMPRESS_IRQN
EMPRESS Interrupt request output
FLASH_OEN
FLASH output enable control signal
G_IN_VIP
Video green input to Video Input Processor
G_OUT
Video green output from Host Decoder
G_OUT_B
Filtered green video output from Host Decoder
GNDD
Digital Ground
HD_M_AD(13:0)
Host Decoder SDRAM address bus
HD_M_CASN
Host Decoder SDRAM column address strobe
HD_M_CLK
Host Decoder SDRAM clock
HD_M_CS0N
Host Decoder SDRAM chip select
HD_M_DQ(15:0)
Host Decoder SDRAM data bus
HD_M_DQML
Host Decoder SDRAM data mask enable(Lower)
HD_M_DQMU
Host Decoder SDRAM data mask enable(Upper)
HD_M_RASN
Host Decoder SDRAM row address strobe
HD_M_WEN
Host Decoder SDRAM write enable
HSOUT
Horizontal synchronisation OUT
ION
Inverted ON: Enable the power supply for the digital board when LOW
IRESET_DIG
Initialisation of the digital board, HIGH when power ON
JTAG3_TCK
JTAG Test Clock
JTAG3_TD_VIP_TO_VE
JTAG Transmitted Data Video input Processor to Video Encoder
JTAG3_TD_VSM_TO_VIP
JTAG Transmitted Data Versatile Stream Manager to Video Input Processor
JTAG3_TMS
JTAG Test Mode Select
JTAG3_TRSTN
JTAG Test part ResetN
LOAD_DVN
LOAD Digital Video(LOW active)
MUTEN
Mute enable
MUTEN_LV
Mute enable Low Voltage
P_SCAN_YUV(7:0)
Progressive Scan digital video bus
R_IN_VIP
Video Red input to Video Input Processor
R_OUT
Video Red output from Host Decoder
R_OUT_B
Filtered Red Video output from Host Decoder
RAS
Row Address Strobe
RESETN
Reset Host Decoder
RESETN_BE
System reset basic engine (buffered)
RESETN_DVIO
System reset Digital Video Input Output (buffered)
RESETN_VE
System reset Video Encoder
ROMH_CEN
Flash 2 chip enable
ROML_CEN
Flash 1 chip enable
RSTN_BE
Reset control of basic engine
RSTN_DVIO
Reset control of DVIO
RTS1P
Ready To Send data to service serial interface
RX1P
Receive data from service serial interface
SCL
I2C bus clock
SD_CASN
SDRAM Column Address strobe output (active LOW)
SD_CLK
SDRAM clock output
SD_CLKE
SDRAM clock enable output
SD_CSN
SDRAM
SD_DQM(1:0)
SDRAM data mask enable output

SD_RASN
SDRAM row address strobe output
SD_WEN
SDRAM write enable output
SDA
I2C bus data
SEL_ACLK1
Select audio clock(playback)
SM_CS3N
SRAM chip select
SM_LBN
SRAM lower bank
SM_OEN
SRAM output enable
SM_UBN
SRAM upper bank
SM_WEN
SRAM write enable
SMA(17:0)
SRAM address output
SMD(15:0)
SRAM data input/output
SYSCLK_EMPRESS
System clock EMPRESS
SYSCLK_PROGSCAN
System clock Progressive Scan
SYSCLK_VSM_5508
System clock VSM and Host decoder
TX1P
Transmit data to service serial interface
U_IN
Video U input
U_IN_VIP
Video U input to Video Input Processor
V_IN
Video V input
V_IN_VIP
Video V input to Video Input Processor
VCC3_CLK_BUF
Power supply 3V3 clock buffer
VCC3_VSM
Power supply 3V3 Versatile Stream Manager
VCC3_VSM_MEM
Power supply 3V3 Versatile Stream Manager Memory
VCC5_4046
Power supply 5V to PLL IC
VDD_125
Power supply 5V to buffer 7202
VDD_CORE
Sti5508 Core supply voltage 2.5V
VDD_EMP
Empress supply voltage 3.3V
VDD_EMP_CORE
Empress Core supply voltage 2.5V
VDD_FLASH_H
Flash 7301 supply voltage
VDD_FLASH_L
Flash 7302 supply voltage
VDD_LVC32
Power supply LVC32
VDD_PCM
Power supply Audio decoder of Sti5508
VDD_PLL
Power supply PLL audio decoder of Sti5508
VDD_RGB
Power supply video encoder of Sti5508
VDD_STI
Power supply of Sti5508
VDD_YCC
Power supply video encoder of Sti5508
VDD5_MK2703
Power supply MK2703
VDD5_OSC
Power supply Oscillator
VDDA1A_7118
Power supply for analog input of VIP
VDDA2A_7118
Power supply for analog input of VIP
VDDA3A_7118
Power supply for analog input of VIP
VDDA4A_7118
Power supply for analog input of VIP
VDDE_7118
Power supply digital for peripheral cells of VIP
VDDI_7118
Power supply digital for core of VIP
VDDX_7118
Power supply for crystal oscillator of VIP
VE_DATA(7:0)
Video Encoder data Bus
VE_DSN
Video Encoder Data Strobe
VE_DTACKN
Video Encoder Data Transfer acknowledge
VIP_ERROR
Video Input Processor error
VIP_FB
Video Input Processor Fast Blanking
VIP_FID_FF
Video Input Processor field indentifier to Flip Flop
VIP_HS
Video Input Processor horizontal synchronisation
VIP_ICLK
Video Input Processor Input Clock
VIP_IDQ
Video Input Processor output data qualifier
VIP_IGP1
Video Input Processor input general purpose 1
VIP_INT
Video Input Processor interrupt
VIP_RTS1
Video Input Processor ready to send
VIP_VS
Video Input Processor vertical synchronisation
VIP_YUV(7:0)
Video Input Processor digital video(CCIR 656)
VS_IN
Vertical synchronisation IN
VSM_M_A(13:0)
Versatile Stream Manager SDRAM address bus
VSM_M_CASN
Versatile Stream Manager SDRAM column address strobe
VSM_M_CLKEN
Versatile Stream Manager SDRAM clock enable
VSM_M_CLKOUT
Versatile Stream Manager SDRAM clock out
VSM_M_D(15:0)
Versatile Stream Manager SDRAM data bus
VSM_M_LDQM
Versatile Stream Manager SDRAM lower data mask enable
VSM_M_RASN
Versatile Stream Manager SDRAM row address strobe
VSM_M_UDQM
Versatile Stream Manager SDRAM upper data mask enable
VSM_M_WEN
Versatile Stream Manager SDRAM write enable
VSM_UART1_CTSN
Versatile Stream Manager UART1 clear to send to analog board (UART1 is gateway to analog board)
VSM_UART1_RTSN
Versatile Stream Manager UART2 clear to send to DVIO board (UART2 is gateway to DIVIO board)
VSM_UART1_RX
Versatile Stream Manager UART1 ready to send to analog board
VSM_UART1_TX
Versatile Stream Manager UART2 ready to send to DVIO board
VSM_UART2_CTSN

Versatile Stream Manager UART1 received data to analog board
VSM_UART2_RTSN
Versatile Stream Manager UART2 received data to DVIO board
VSM_UART2_RX
Versatile Stream Manager UART1 transmitted data to analog board
VSM_UART2_TX
Versatile Stream Manager UART2 transmitted data to DVIO board
VSOUT
Vertical synchronisation OUT
WE
Write Enable
Y_IN
Luminance input from analog board
Y_OUT
Luminance output from Host Decoder
Y_OUT_B
Filtered luminance output
YY_OUT(9:0)
Luminance output from FLI

Divio Board

+3SV_DV_EDO
+3V3 Power supply EDO Bus IC7404
+3V3
+3V3 Power supply
+3V3_DLY
+3V3 Powar supply for IC7500
+3V3_DV
+3V3 Power supply for IC7404
+3V3_FPGA
+3V3 Internal Power supply for IC7303
+3V3_FPGA_CONF
+3V3 Power supply for IC 7300
+3V3_IEEE_A
+3V3 Analogue Power supply for PHY IC 7101
+3V3_IEEE_D
+3V3 Digital Power supply for PHY IC 7101
+3V3_IEEE_PLL
+3V3 PLL Power supply for PHY IC 7101
+3V3_LINK
+3V3 Power supply IC7103
+3V3_PLL
+3V3 Power supply IC7307 & IC7308
+3V3_SRAM
+3V3 Power supply IC7301, IC7302, IC7305 & IC7306
+5V
+5V Power supply
+5V_PROC
+5V Power supply IC7200, IC7201, IC7203 & IC7208
+VCC_DV_RAM
+3V3 Power supply for DV_RAM (IC7400--> IC7404)
1394_RSTN
Reset of LINK IC (7103) and PHY IC (7101)
A(0:8)
Address lines
AUD_BCLK
Audio Bit Clock
AUD_MUTE
Audio Mute
AUD_SDI
Audio Serial Data Input
AUD_SDO_CON
Audio Serial Data Output to buffer IC 7505
AUD_SDO_DAC
Audio Serial Data Output to DAC IC 7506
AUD_WS_701
Audio Word Select to DV CODEC IC 7404
AUD_WS_OUT
Audio Word Select to buffer IC 7505
BUFENN_AUD
Buffer Enable Audio
BUFENN_VID
Buffer Enable Video
CCLK
Configuration Clock
CLK27M
27MHz Clock
CLK27M_CON
27MHz Clock to Digital Board
CLK27M_DV
27MHz Clock Digital Video Codec
CLK27M_OSC
27MHz Clock IC7304
CLOCKGENAUD
Clock generator Audio
CLOCKGENVID
Clock generator Video
CTSN
Clear to Send
DATA
Data from config ROM
DONE
Indication of the completion of the configuration process
DOUT
Serial configuration data output
DV_ASN
DVCODEC Address Strobe
DV_DRQN
DVCODEC Data Request Interrupt
DV_DSLN
DVCODEC Data Strobe Lower 8 bits
DV_DSUN
DVCODEC Data Strobe Upper 8 Bits
DV_DTACKN
DVCODEC Data Transfer Acknowledge
DV_ERRN
DVCODEC Error Interrupt
DV_HS_IN
DVCODEC Horizontal synchronisation In
DV_HS_OUT
DVCODEC Horizontal synchronisation Out
DV_LCN
DVCODEC Last Code Interrupt
DV_PDN
DVCODEC Power Down
DV_RSTN
DVCODEC System Reset for NW701
DV_RWN
DVCODEC Read/Write control signal
DV_VS
DVCODEC Vertical synchronisation
FIFOA_A(0:15)
FIFO buffer A Address bus
FIFOA_OEN
FIFO buffer A Output enable
FIFOA_WEN
FIFO buffer A Write enable
HAD(0:7)
Host Address/Data bus for register settings of IC7404
INITN
Initiate Configuration
IO(0:30)
Data bus of IC7404
ISPN
In System Program Line (used for programming IC7203)
LCASN
Lower Column Address strobe for IC7404 DRAMS
LINK_AVCLK
LINK IC Audio/Video Interface Clock
LINK_AVFSYNC
LINK IC Audio/Video frame sync
LINK_AVREADY
LINK IC Audio/Video data ready to send
LINK_AVSYNC
LINK IC Audio/Video packet sync

LINK_AVVALID
LINK IC Audio/Video data valid
LINK_CSN
LINK IC chip select
LINK_INTN
LINK IC interrupt
LINKFIFO_DQ(0:7)
Audio Video data interface
PA(0:15)
SRAM processor address
PAD(0:7)
SRAM processor data
PALE
Processor Address Latch Enable
PHY_CNA
PHY 1394 cable not active
PHY_LPS
LINK IC power status
PINT0N
Processor Interrupt 0
PINT1N
Processor Interrupt 1
PRDN
Processor read
PROGRAMN
Low active input to initiate a configuration cycle
PRSTN
Processor reset
PWRN
Processor write
RASN
Row address strobe
RESETN
DVIO board reset
RTSN
System Reset
RXD
Receive Data
SRAMCE0N
SRAM processor chip enable 0
SRAMRDN
SRAM processor output enable
TCK
Boundary scan Test Clock
TDI
Boundary scan Test Data Input
TDO
Boundary scan Test Data Output
TDO_CONF
Boundary scan Test Data Output from IC 7309
TMS
Boundary scan Test Mode Select
TXD
Transmitted Data
UCASN
Upper column address strobe
WEN
Write Enable control signal to SRAM
YUV(0:7)
Digital Video

Analog Board

+5VSTBY
Permanent Supply 5V
8SC2
Pin8 Scart2 (only for Europe)
A_DATA
Data from Analog- to Digital-Board (UART-Communication)
A_RDY
Analog-board ready (status information to digital-board)
A18 - A19
Parallel Address Bus (CC - Flash-ROM and S-RAM)
A8 - A17
Parallel Address Bus (CC - Flash-ROM and S-RAM)
AD0 - AD7
Parallel Address and Data Bus (CC - Flash-ROM and S-RAM)
AFC
Automatic Frequency Control
AFEL
Audio Frontend Left
AFER
Audio Frontend Right
AGC / WSRI
Automatic Gain Control (for Europe), Wide Screen Rear In (for NTSC)
AINFL
Audio In Front Left
AINFR
Audio In Front Right
AKILL
Audio Kill Signal
ALADC
Audio Left to ADC
ALDAC
Audio Left from DAC
ALE
Address Latch Enable
AM0
Adress-mode 0
AM1
Adress-mode 1
ARADC
Audio Right to ADC
ARDAC
Audio Right from DAC
ASCC1M
Audio Scart 1 Mute (System Clock Output for Real time Clock-Adjustment)
AVCC
Power Supply for A/D-converter
AVSS
GND-Pin for A/D-converter
CFIN
Chroma Front In
CS0_
Chip Select 0 (CC - S-RAM)
CS2_
Chip Select 2 (CC - Flash-ROM)
CVBSFIN
Video Front In
D_DATA
Data from Digital- to Analog-Board (UART-Communication)
D_RDY
Digital-board ready (status information from digital-board)
DAC_MUTE
Mute Signal for DAC
DAOUT
Digital Audio Out
DVAL
Audio from Digital Video In Left
DVAR
Audio from Digital Video In Right
DVCC1
Power Supply Pin
DVCC2
Power Supply Pin
DVCC3
Power Supply Pin
DVSS1
GND Pin
DVSS2
GND Pin
DVSS3
GND Pin
FAN_OFF
Fan for Basic engine
FBIN
Fast Blanking input
FOME

FOllow ME Status line (matching signals yes/no; only for Europe)
G1...10
DISPLAY GRID
INT
Interrupt OUT for the CC
INT
Interrupt – line from Display Print
ION
Inverse ON-Line
IPFAIL
Inverse Power Fail Detection
IPOR
Inverse Power On Reset
IRESET
Inverse Reset Input
IRR
Signal from IR-Receiver
K1
Key-Input-Line
K2
Key-Input-Line
KILL
Audio Mute
P50 IN
P50 INput-line (only for Europe)
P50 OUT
P50 OUTput-line (only for Europe)
POR_DC
Power On Reset for Display Control Print (Ext_DL)
PSS
Pal/Secam-Select
PWM_FIL
Control line for Filament Voltage Generation
PWONSW
Amplifier Switch Audio A/D Converter
RD_
Output Enable ReaD (CC - Flash-ROM and S-RAM)
RECLED
Control Signal for REC-LED
RESET_DIG
Reset Line to Digital Board
RP_
Inverse Reset line to Flash-ROM
RSA1/2
Record Selector 1/2
RY/BY_
Ready/Busy – input line (from Flash-ROM)
SIF1
Sound Intermediate frequency
SB1
Secam Band 1 (PCB-Test entrance)
SCL
I²C-Bus
SCLSW
Switched I²C-Bus
SDA
I²C-Bus
SDASW
Switched I²C-Bus
SFS_TS
SAW Filter Select Trap Select
STBY
Standby-Line (Flash_Toshiba)
SYNC
Video Sync Input
TEMP_SENSE
Temperature Sense Line
VER
HW-version input
VFV
Video from Frontend
VKK
VFT Driver Power Supply
VREFH
Pin for Reference-voltage input to A/D-converter
VREFL
Pin for Reference-voltage input to A/D-converter
VS1/2
View Selector 1/2
WR_
Write Enable (CC - Flash-ROM and S-RAM)
WSFI
Wide Screen Signalling Front In
WU
Wake Up
X1
Oscillator Pin
X2
Oscillator Pin
XIN
Oscillator Pin
XOUT
Oscillator Pin
XT1
Low Frequency Oscillator Pin
XT2
Low Frequency Oscillator Pin
YFIN
Luminance Front In

10. Spare Parts List

Mechanical Parts

0001	3103 607 90062	CONTROL PANEL ASSY EU DVIO, DVDR890
